Notes:

µg/kg = microgram per kilogram
mg/kg = milligram per kilogram
MDL = method detection limit
MRL = method reporting limit
- = Not Analyzed
bold = analyte detected above MDL.

J = The reported value is an estimate.
U = The analyte was not detected at or above the MDL.
UJ = The analyte was not detected. The reported sample quantification limit is an estimate.
For some (older) historial data, the MDLs were not available. In these cases, MRLs were used.

Notes:

µg/kg = microgram per kilogram
MDL = method detection limit
MRL = method reporting limit
- = Not Analyzed
bold = analyte detected above MDL.
J = The reported value is an estimate.
U = The analyte was not detected at or above the MDL.
UJ = The analyte was not detected. The reported sample quantification limit is an estimate.
For some (older) historial data, the MDLs were not available. In these cases, MRLs were used.

Notes:

µg/kg = microgram per kilogram
MDL = method detection limit
MRL = method reporting limit
- = Not Analyzed
bold = analyte detected above MDL.
J = The reported value is an estimate.
U = The analyte was not detected at or above the MDL.
UJ = The analyte was not detected. The reported sample quantification limit is an estimate.
For some (older) historial data, the MDLs were not available. In these cases, MRLs were used.

Notes:

btc = below top of well casing
µg/L = microgram per liter
MDL = method detection limit
MRL = method reporting limit
- = Not Analyzed
bold = analyte detected above MDL.
J = The reported value is an estimate.
U = The analyte was not detected at or above the MDL.
UJ = The analyte was not detected. The reported sample quantification limit is an estimate.
For some (older) historial data, the MDLs were not available. In these cases, MRLs were used.

Notes:

µg/kg = microgram per kilogram
mg/kg = milligram per kilogram
MDL = method detection limit
MRL = method reporting limit
- = Not Analyzed
bold = analyte detected above MDL.

J = The reported value is an estimate.
U = The analyte was not detected at or above the MDL.
UJ = The analyte was not detected. The reported sample quantification limit is an estimate.
For some (older) historial data, the MDLs were not available. In these cases, MRLs were used.

Notes:
µg/kg = microgram per kilogram
mg/kg = milligram per kilogram
MDL = method detection limit
- = Not Analyzed
bold = analyte detected above MDL.
J = The reported value is an estimate.

Notes:
µg/kg = microgram per kilogram
mg/kg = milligram per kilogram
MDL = method detection limit
- = Not Analyzed
bold = analyte detected above MDL.
J = The reported value is an estimate.

Notes:

µg/kg = microgram per kilogram
mg/kg = milligram per kilogram
MDL = method detection limit
- = Not Analyzed
bold = analyte detected above MDL.
J = The reported value is an estimate.
U = The analyte was not detected at or above the MDL.
UJ = The analyte was not detected. The reported sample quantification limit is an estimate.
For some (older) historial data, the MDLs were not available. In these cases, MRLs were used.

Notes:
µg/kg = microgram per kilogram
mg/kg = milligram per kilogram
MDL = method detection limit
- = Not Analyzed
bold = analyte detected above MDL.
J = The reported value is an estimate.

Notes:
µg/kg = microgram per kilogram
mg/kg = milligram per kilogram
MDL = method detection limit
- = Not Analyzed
bold = analyte detected above MDL.
J = The reported value is an estimate.

Notes:
µg/kg = microgram per kilogram
MDL = method detection limit
MRL = method reporting limit
- = Not Analyzed
bold = analyte detected above MDL.
C = concentration represents coeluting congeners.
J = The reported value is an estimate.
U = The analyte was not detected at or above the MDL.
UJ = The analyte was not detected. The reported sample quantification limit is an estimate.
For some (older) historial data, the MDLs were not available. In these cases, MRLs were used.

[1] = When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.

Notes:
µg/L = microgram per liter
MDL = method detection limit
MRL = method reporting limit
- = Not Analyzed
bold = analyte detected above MDL.
C = concentration represents coeluting congeners.
EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
J = The reported value is an estimate.
U = The analyte was not detected at or above the MDL.
UJ = The analyte was not detected. The reported sample quantification limit is an estimate.
For some (older) historial data, the MDLs were not available. In these cases, MRLs were used.

[1] = When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.

Notes:

All results are in units of pg/L (picograms/Liter)

C = concentration represents coeluting congeners
U = The analyte was not detected above the reported sample specific detection limit.
J = The reported value is an estimate.
EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
PCBs = Polychlorinated Biphenyls
[1] = When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.

Notes:

All results are in units of pg/L (picograms/Liter)

C = concentration represents coeluting congeners
U = The analyte was not detected above the reported sample specific detection limit.
J = The reported value is an estimate.
EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
PCBs = Polychlorinated Biphenyls
[1] = When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.

Notes:

All results are in units of pg/L (picograms/Liter)

C = concentration represents coeluting congeners
U = The analyte was not detected above the reported sample specific detection limit.
J = The reported value is an estimate.
EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
PCBs = Polychlorinated Biphenyls
[1] = When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.

APPENDIX H
PCB AND PAH SUMMATIONS

Memorandum

URS

Date: September 30, 2010

Subject: Modified Approach for Calculating Total Concentrations of PCBs and PAHs
Bradford Island Remedial Investigation
Cascade Locks, Oregon

Background

During negotiations with the Technical Advisory Group (TAG) in early 2010, the following conventions were developed for summing total concentrations of polychlorinated biphenyls (PCBs) and polycyclic aromatic hydrocarbons (PAHs) for use in the Bradford Island Remedial Investigation (RI) and risk assessments (RAs):

Total PCBs (as Congeners) – Total concentrations would be calculated using half of the reported detection limit (RDL) as a substitution value for the undetected congeners, and half of the reported value as a substitution value for the estimated maximum potential concentration (EMPC)-qualified data.

Total PCBs (as Aroclors) – Individual Aroclors which were never detected in a given media would be excluded from the sums. Aroclors that may be undetected in a certain sample but detected at least once in the remaining samples of a given media would be included in the sample-specific summations using half of the method detection limit (MDL) as a substitution value.

Total PAHs – Total concentrations would be calculated for low-molecular weight PAHs (LPAHs), high-molecular weight PAHs (HPAHs), and all PAHs (tPAHs). Individual PAHs never detected in a given media would be excluded from the sums. PAHs that may be undetected in a certain sample but detected at least once in the remaining samples of a given media would be included in the sample-specific summations using half of the MDL as a substitution value.

USACE Center of Expertise Recommendations

Upon review of the draft RI report by the USACE center of expertise, the reviewers recommended that, instead of the substitution method, the Kaplan-Meier method be used to calculate sums whenever possible. The substitution method (no matter what value – zero, the MDL, or half the MDL – is selected for the substitution) is not recommended by statisticians or the EPA (Helsel 1990, 2005b, 2005c, 2009; EPA 2006, 2010). Instead, the EPA currently recommends the Kaplan-Meier method with Efron's bias correction (EPA, 2010) which is generally applicable for summing data sets in which at least three of the components are detected. Use of the Kaplan-Meier method for calculating sums is

also consistent with the fact that the Kaplan-Meier method is already used in the RI Report for calculating statistical parameters, including mean, standard deviation, and 95% UCL (upper confidence limit on the mean), for data sets with undetected results.

In order to comply with the recently updated Department of Defense Quality Systems Manual (DoD QSM) version 4.1 (DOD, 2009), the reviewers recommended that full method reporting limit (MRL) should be used for censoring undetected values and that the full reported value should be used for censoring EMPC-qualified data. The reviewers acknowledged that statisticians strongly recommend against insider censoring (e.g., Helsel, 2005a) in which undetected results are censored using MRL values, which are greater than the "J"-flagged detected data (which fall between the MDL and the MRL and are used at face value). However, the Kaplan-Meier method is non-parametric and the plotting position of survival function is based on the detected results; therefore, this method is relatively insensitive to the choice of censoring values. The reviewers recommended that the sums could be calculated twice, once using the MDLs and once using the MRLs for censoring non-detects, and the differences discussed in the uncertainty sections of the report.

Where the Kaplan-Meier method cannot be used, the reviewers recommended using the substitution method, substituting the full method reporting limit (MRL) for undetected compounds (in compliance with the DoD QSM; DOD, 2009). The reviewers agreed that individual compounds that were never detected in site media should be excluded from the sums for total PCBs as Aroclors.

Proposed Modifications to the RI Report

The Kaplan-Meier method is a non-parametric statistical method and does not require assumptions of normality (Kaplan and Meier, 1958). It is currently the recommended method used in EPA's ProUCL software for calculating the 95% UCL for data sets with one or more censored results (EPA 2009a, 2009b). In the application of summing a group of related compounds, the Kaplan-Meier mean is estimated from a set of data (consisting of detected and non-detected values) coming from a given sample, and this Kaplan-Meier mean is then multiplied by the number of compounds (mean × n) to compute the sum for the sample.

In the revised RI Report, the Kaplan-Meier method (as encoded in the ProUCL software) will be used to calculate total PCB and PAH concentrations, with the incorporation of the Efron's bias correction, in which the minimum result (if it is a censored value) is re-coded as a detected result (EPA, 2010). The Kaplan-Meier method is used whenever it is feasible with the ProUCL software (i.e., when there are five or more components to the sum and at least two detected results [three coded-detected results if Efron's bias correction is used]). To safeguard against a potential biased-high estimate of the KM mean, if the aforementioned summation method results in a total concentration greater than a simple summation of detected concentrations and full censoring concentrations

(MDL, MRL, RDL, or EMPC value) of the non-detected data, the simple sum will establish an upper bound of the total concentration.

Total PCBs (as Congeners) – Total concentrations would be calculated using the Kaplan-Meier method, censoring undetected data at the reported detection limit (RDL) and EMPC-qualified at the reported concentration. (Please note that although censoring using a MRL was suggested by the reviewers, the laboratory only provided RDL values.) The resulting total concentration will be capped by the simple sum of detected concentrations, EMPC-qualified concentrations, and RDLs for undetected congeners. This method is more statistically robust, as well as more conservative than calculating the sums by substitution of half of the RDL for undetected results and half of the reported value for EMPC-qualified data. However, it does not change the conclusions derived from the sums (i.e., comparison to screening level values).

For all samples used in the RI Report, the attached table compares the concentrations of total PCB (as congeners) computed in five different ways:

- Simple sum with undetected and EMPC-qualified data set to zero.
- Simple sum with undetected results set at one half the RDL and EMPC-qualified data at one half the reported value.
- Simple sum with undetected results set at the RDL and EMPC-qualified data at the reported value.
- Kaplan-Meier based sum.
- Kaplan-Meier based sum, capped at the simple sum with undetected results set at the RDL and EMPC-qualified data at the reported value

URS proposes that the final column (capped Kaplan-Meier method) be used in the RI Report and associated RAs.

Total PCBs (as Aroclors) – Since no more than two individual Aroclors were ever detected in a given sample, the Kaplan-Meier method cannot be used. Therefore, the substitution method will be used. Individual compounds that were never detected in a given media will be excluded from the sums. Two sums will be calculated for each sample. In the first sum, Aroclors that may be undetected in a certain sample but detected at least once in the remaining samples of a given media would be included in the sample-specific summations using the MDL as a substitution value. In the second sum, these Aroclors would be included using the MRL as a substitution value.

Total PAHs – Total concentrations will be calculated for low-molecular weight PAHs (LPAHs), high-molecular weight PAHs (HPAHs), and all PAHs (tPAHs). No individual PAHs will be excluded from the sums. The sums will be calculated twice: once using the MDL as the censoring value for non-detects, and once using the MRL as the censoring value for non-detects. Whenever a minimum of five component PAHs are included in

the sum, and at least two component PAHs are detected, the sum will be calculated using the Kaplan-Meier method, capped by the simple sum with undetected results set at the MDL (or MRL). When these requirements are not met, the sum will be calculated as the simple sum with undetected results set at the MDL (or MRL).

Notes:

MDL = method detection limit
MRL = method reporting limit
bold = analyte detected above MDL.
PAH = Polycyclic Aromatic Hydrodarbons
LPAH = Low Molecular Weight PAH
HPAH = High Molecular Weight PAH
- = Not Analyzed

J = The reported value is an estimate.
UJ = The analyte was not detected. The reported MDL/MRL is an estimate.
U = The analyte was not detected at or above the MDL.
KM = Kaplan–Meier-based with Efron's bias correction
KM, capped = Kaplan–Meier-based with Efron's bias correction, capped
* = The data displayed are the result of averaging primary and field duplicate results at this sampling location as described in Section 5.1
All units are in micrograms per kilogram (µg/kg), dry weight

Notes:

MDL = method detection limit
MRL = method reporting limit
bold = analyte detected above MDL.
PAH = Polycyclic Aromatic Hydrodarbons
LPAH = Low Molecular Weight PAH
HPAH = High Molecular Weight PAH
- = Not Analyzed

J = The reported value is an estimate.
UJ = The analyte was not detected. The reported MDL/MRL is an estimate.
U = The analyte was not detected at or above the MDL.
KM = Kaplan–Meier-based with Efron's bias correction
KM, capped = Kaplan–Meier-based with Efron's bias correction, capped
* = The data displayed are the result of averaging primary and field duplicate results at this sampling location as described in Section 5.1
All units are in micrograms per kilogram (µg/kg), dry weight

Notes:

MDL = method detection limit
MRL = method reporting limit
bold = analyte detected above MDL.
PAH = Polycyclic Aromatic Hydrodarbons
LPAH = Low Molecular Weight PAH
HPAH = High Molecular Weight PAH
- = Not Analyzed

J = The reported value is an estimate.
UJ = The analyte was not detected. The reported MDL/MRL is an estimate.
U = The analyte was not detected at or above the MDL.
KM = Kaplan–Meier-based with Efron's bias correction
KM, capped = Kaplan–Meier-based with Efron's bias correction, capped
* = The data displayed are the result of averaging primary and field duplicate results at this sampling location as described in Section 5.1
All units are in micrograms per kilogram (µg/kg), dry weight

Notes:

MDL = method detection limit
MRL = method reporting limit
bold = analyte detected above MDL.
PAH = Polycyclic Aromatic Hydrodarbons
LPAH = Low Molecular Weight PAH
HPAH = High Molecular Weight PAH
- = Not Analyzed

J = The reported value is an estimate.
UJ = The analyte was not detected. The reported MDL/MRL is an estimate.
U = The analyte was not detected at or above the MDL.
KM = Kaplan–Meier-based with Efron's bias correction
KM, capped = Kaplan–Meier-based with Efron's bias correction, capped
* = The data displayed are the result of averaging primary and field duplicate results at this sampling location as described in Section 5.1
All units are in micrograms per kilogram (µg/kg), dry weight

Notes:

MDL = method detection limit
MRL = method reporting limit
bold = analyte detected above MDL.
PAH = Polycyclic Aromatic Hydrodarbons
LPAH = Low Molecular Weight PAH
HPAH = High Molecular Weight PAH
NC = Not calculated

J = The reported value is an estimate.
UJ = The analyte was not detected. The reported MDL/MRL is an estimate.
U = The analyte was not detected at or above the MDL.
KM = Kaplan–Meier-based with Efron's bias correction
KM, capped = Kaplan–Meier-based with Efron's bias correction, capped
* = The data displayed are the result of averaging primary and field duplicate results at this sampling location as described in Section 5.1
All units are in micrograms per kilogram (µg/kg), dry weight

Notes:
[1] Only Aroclors 1248, 1254, and 1260 were included in summing Total PCBs as Aroclors because all other aroclors were undected in Landfill AOPC soil samples.
MDL = method detection limit
MRL = method reporting limit
bold = analyte detected above MDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The reported MDL/MRL is an estimate.
U = The analyte was not detected at or above the MDL.
* = The data displayed are the result of averaging primary and field duplicate results at this sampling location as described in Section 5.1
All units are in micrograms per kilogram (µg/kg), dry weight

Aroclor 1260	**78.0**	**78.0**	**37.0**	**37.0**	**160**	**160**	**35.0**	**35.0**	**27.0**	**27.0**	19.0 U	19.0 U
Total PCBs as Aroclors [1]	**78.0**	**78.0**	**37.0**	**37.0**	**160**	**160**	**35.0**	**35.0**	**27.0**	**27.0**	19.0 U	19.0 U

Notes:
[1] Only Aroclor 1260 was included in summing Total PCBs as Aroclors because all other aroclors were undected in Bulb Slope AOPC soil samples.
MDL = method detection limit
MRL = method reporting limit
bold = analyte detected above MDL.
J = The reported value is an estimate.
U = The analyte was not detected at or above the MDL.
* = The data displayed are the result of averaging primary and field duplicate results at this sampling location as described in Section 5.1
All units are in micrograms per kilogram (µg/kg), dry weight

Total PCBs as Congeners in ug/kg, wet weight													
Total PCBs as Congeners (full EMPC/full RDL)		33.7	J	1,440	J	879	J	96.7	J	42.0	J	137	J
Total PCBs as Congeners (KM-based)		33.7	J	1,440	J	879	J	96.7	J	42.0	J	137	J
Total PCBs as Congeners (KM-based, capped)		33.7	J	1,440	J	879	J	96.7	J	42.0	J	137	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight													
Total PCBs as Congeners (full EMPC/full RDL)		59.4	J	1,734	J	69.7	J	149	J	19,310	J	325	J
Total PCBs as Congeners (KM-based)		59.3	J	1,733	J	69.6	J	149	J	19,303	J	325	J
Total PCBs as Congeners (KM-based, capped)		59.3	J	1,733	J	69.6	J	149	J	19,303	J	325	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight													
Total PCBs as Congeners (full EMPC/full RDL)		1,306	J	32.2	J	54.8	J	1,193	J	26,511	J	2,482	J
Total PCBs as Congeners (KM-based)		1,306	J	32.1	J	54.9	J	1,193	J	26,505	J	2,482	J
Total PCBs as Congeners (KM-based, capped)		1,306	J	32.1	J	54.8	J	1,193	J	26,505	J	2,482	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight															
Total PCBs as Congeners (full EMPC/full RDL)		40.8	J	201	J	48.0	J	42.1	J	45.1	J	22.5	J	164	J
Total PCBs as Congeners (KM-based)		40.7	J	201	J	47.9	J	41.8	J	44.7	J	22.1	J	164	J
Total PCBs as Congeners (KM-based, capped)		40.7	J	201	J	47.9	J	41.8	J	44.7	J	22.1	J	164	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight													
Total PCBs as Congeners (full EMPC/full RDL)		45.0	J	42.0	J	117	J	35.8	J	39.8	J	69.1	J
Total PCBs as Congeners (KM-based)		44.4	J	41.7	J	117	J	35.8	J	39.8	J	69.0	J
Total PCBs as Congeners (KM-based, capped)		44.4	J	41.7	J	117	J	35.8	J	39.8	J	69.0	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Table H-7

Total PCBs as Congeners in ug/kg, wet weight																	
Total PCBs as Congeners (full EMPC/full RDL)		50.2	J	43.1	J	499	J	44.2	J	60.6	J	77.9	J	53.0	J	52.8	J
Total PCBs as Congeners (KM-based)		50.2	J	43.1	J	499	J	44.2	J	60.6	J	77.9	J	52.9	J	52.8	J
Total PCBs as Congeners (KM-based, capped)		50.2	J	43.1	J	499	J	44.2	J	60.6	J	77.9	J	52.9	J	52.8	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, dry weight													
Total PCBs as Congeners (full EMPC/full SDL)		29.7	J	1.70	J	1.09	J	2.10	J	1.24	J	1.13	J
Total PCBs as Congeners (KM-based)		29.7	J	1.69	J	1.08	J	2.10	J	1.24	J	1.12	J
Total PCBs as Congeners (KM-based, capped)		29.7	J	1.69	J	1.08	J	2.10	J	1.24	J	1.12	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, dry weight													
Total PCBs as Congeners (full EMPC/full SDL)		0.784	J	0.696	J	0.155	J	0.402	J	0.0670	J	0.206	J
Total PCBs as Congeners (KM-based)		0.778	J	0.684	J	0.143	J	0.399	J	0.0611	J	0.204	J
Total PCBs as Congeners (KM-based, capped)		0.778	J	0.684	J	0.143	J	0.399	J	0.0611	J	0.204	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners (KM-based)		0.272	J	0.442	J	0.273	J	0.161	J	0.634	J	0.326	J	0.409	J	0.0880	J
Total PCBs as Congeners (KM-based, capped)		0.272	J	0.442	J	0.273	J	0.161	J	0.634	J	0.326	J	0.409	J	0.0880	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Table H-8
Sediment PCB Congener Analysis Results

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight													
Total PCBs as Congeners (full EMPC/full SDL)		312	J	65.7	J	51.5	J	30.6	J	26.7	J	26.9	J
Total PCBs as Congeners (KM-based)		312	J	65.7	J	51.5	J	30.7	J	26.7	J	26.9	J
Total PCBs as Congeners (KM-based, capped)		312	J	65.7	J	51.5	J	30.6	J	26.7	J	26.9	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight													
Total PCBs as Congeners (full EMPC/full SDL)		25.5	J	24.5	J	25.9	J	24.7	J	65.8	J	95.1	J
Total PCBs as Congeners (KM-based)		25.6	J	24.5	J	25.9	J	24.6	J	65.8	J	95.1	J
Total PCBs as Congeners (KM-based, capped)		25.5	J	24.5	J	25.9	J	24.6	J	65.8	J	95.1	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight													
Total PCBs as Congeners (full EMPC/full SDL)		33.2	J	34.0	J	33.1	J	33.3	J	31.7	J	30.9	J
Total PCBs as Congeners (KM-based)		33.1	J	34.0	J	33.1	J	33.2	J	31.6	J	30.8	J
Total PCBs as Congeners (KM-based, capped)		33.1	J	34.0	J	33.1	J	33.2	J	31.6	J	30.8	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight													
Total PCBs as Congeners (full EMPC/full SDL)		28.4	J	33.0	J	31.6	J	31.4	J	29.8	J	30.4	J
Total PCBs as Congeners (KM-based)		28.3	J	32.9	J	31.6	J	31.3	J	29.7	J	30.4	J
Total PCBs as Congeners (KM-based, capped)		28.3	J	32.9	J	31.6	J	31.3	J	29.7	J	30.4	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight													
Total PCBs as Congeners (full EMPC/full SDL)		34.5	J	33.7	J	30.2	J	28.7	J	34.4	J	33.0	J
Total PCBs as Congeners (KM-based)		34.5	J	33.7	J	30.2	J	28.6	J	34.3	J	32.9	J
Total PCBs as Congeners (KM-based, capped)		34.5	J	33.7	J	30.2	J	28.6	J	34.3	J	32.9	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight													
Total PCBs as Congeners (full EMPC/full SDL)		32.9	J	29.8	J	30.8	J	27.0	J	26.9	J	21.4	J
Total PCBs as Congeners (KM-based)		32.8	J	29.7	J	30.7	J	27.0	J	26.9	J	21.5	J
Total PCBs as Congeners (KM-based, capped)		32.8	J	29.7	J	30.7	J	27.0	J	26.9	J	21.4	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight													
Total PCBs as Congeners (full EMPC/full SDL)		1.46	J	16.8	J	16.9	J	42.7	J	12.5	J	3.14	J
Total PCBs as Congeners (KM-based)		1.44	J	16.9	J	16.9	J	42.6	J	12.4	J	3.12	J
Total PCBs as Congeners (KM-based, capped)		1.44	J	16.8	J	16.9	J	42.6	J	12.4	J	3.12	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight													
Total PCBs as Congeners (full EMPC/full SDL)		0.611	J	0.846	J	0.831	J	1.36	J	0.555	J	1.13	J
Total PCBs as Congeners (KM-based)		0.591	J	0.825	J	0.816	J	1.34	J	0.536	J	1.12	J
Total PCBs as Congeners (KM-based, capped)		0.591	J	0.825	J	0.816	J	1.34	J	0.536	J	1.12	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight											
Total PCBs as Congeners (full EMPC/full SDL)		0.706	J	0.746	J	0.783	J	0.984	J	0.469	J
Total PCBs as Congeners (KM-based)		0.692	J	0.735	J	0.774	J	0.952	J	0.456	J
Total PCBs as Congeners (KM-based, capped)		0.692	J	0.735	J	0.774	J	0.952	J	0.456	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight											
Total PCBs as Congeners (full EMPC/full SDL)		0.510	J	0.889	J	1.96	J	1.14	J	1.03	J
Total PCBs as Congeners (KM-based)		0.496	J	0.876	J	1.94	J	1.12	J	1.02	J
Total PCBs as Congeners (KM-based, capped)		0.496	J	0.876	J	1.94	J	1.12	J	1.02	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight											
Total PCBs as Congeners (full EMPC/full SDL)		0.528	J	0.665	J	0.620	J	0.958	J	0.614	J
Total PCBs as Congeners (KM-based)		0.498	J	0.650	J	0.609	J	0.946	J	0.587	J
Total PCBs as Congeners (KM-based, capped)		0.498	J	0.650	J	0.609	J	0.946	J	0.587	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight													
Total PCBs as Congeners (full EMPC/full SDL)		15.0	J	48.9	J	4,784	J	915	J	559	J	141	J
Total PCBs as Congeners (KM-based)		14.9	J	48.8	J	4,773	J	915	J	559	J	141	J
Total PCBs as Congeners (KM-based, capped)		14.9	J	48.8	J	4,773	J	915	J	559	J	141	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight													
Total PCBs as Congeners (full EMPC/full SDL)		22.9	J	26.2	J	12.3	J	23.1	J	24.1	J	39.7	J
Total PCBs as Congeners (KM-based)		22.9	J	26.1	J	12.3	J	23.1	J	24.2	J	39.6	J
Total PCBs as Congeners (KM-based, capped)		22.9	J	26.1	J	12.3	J	23.1	J	24.1	J	39.6	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight													
Total PCBs as Congeners (full EMPC/full SDL)		9.90	J	35.4	J	19.6	J	35.6	J	40.7	J	16.8	J
Total PCBs as Congeners (KM-based)		9.87	J	35.3	J	19.4	J	35.6	J	40.7	J	16.9	J
Total PCBs as Congeners (KM-based, capped)		9.87	J	35.3	J	19.4	J	35.6	J	40.7	J	16.8	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight													
Total PCBs as Congeners (full EMPC/full SDL)		18.2	J	18.5	J	24.0	J	32.4	J	27.6	J	31.5	J
Total PCBs as Congeners (KM-based)		18.1	J	18.4	J	24.0	J	32.4	J	27.5	J	31.5	J
Total PCBs as Congeners (KM-based, capped)		18.1	J	18.4	J	24.0	J	32.4	J	27.5	J	31.5	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners in ug/kg, wet weight													
Total PCBs as Congeners (full EMPC/full SDL)		22.3	J	27.2	J	17.4	J	30.6	J	24.3	J	8.17	J
Total PCBs as Congeners (KM-based)		22.3	J	27.2	J	17.3	J	30.5	J	24.2	J	8.14	J
Total PCBs as Congeners (KM-based, capped)		22.3	J	27.2	J	17.3	J	30.5	J	24.2	J	8.14	J

Notes:

C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
ng/kg = nanogram/kilogram
ug/kg = micrograms/kilogram
pg/g = picograms/gram

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
RDL = Reported detection limit
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners (full EMPC/full SDL)		16.3	J	99.0	J	56.4	J	154	J	62.1	J	96.9	J
Total PCBs as Congeners (KM-based)		14.7	J	97.7	J	55.7	J	153	J	61.2	J	95.7	J
Total PCBs as Congeners (KM-based, capped)		14.7	J	97.7	J	55.7	J	153	J	61.2	J	95.7	J

Notes:

All results are in units of pg/L (picograms/Liter)
C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
RDL = Reported detection limit

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners (KM-based, capped)		22.6	J	154	J	26.4	J	138	J	24.3	J	154	J	21.2	J	109	J

Notes:

All results are in units of pg/L (picograms/Liter)
C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
RDL = Reported detection limit

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Total PCBs as Congeners (full EMPC/full SDL)		23.9	J	150	J	27.6	J	147	J	26.3	J	123	J
Total PCBs as Congeners (KM-based)		22.8	J	149	J	26.7	J	146	J	25.6	J	123	J
Total PCBs as Congeners (KM-based, capped)		22.8	J	149	J	26.7	J	146	J	25.6	J	123	J

Notes:

All results are in units of pg/L (picograms/Liter)
C = Concentration represents coeluting congeners.
U = The analyte was not detected above the RDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The RDL is an estimate.
RDL = Reported detection limit

EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
1= When two or more congeners can not be resolved in the chromatogram they are considered to be 'coeluting' and are reported as a single concentration. This concentration is reported once for all the coeluting congeners.
KM-based = Kaplan–Meier-based with Efron's bias correction
KM-based, capped = Kaplan–Meier-based with Efron's bias correction, capped

Notes:
[1] The crayfish and sculpin Total PCBs as Aroclors are shown as the maximum MDL/MRL because all aroclors were undected in Reference Area crayfish and sculpin samples.
MDL = method detection limit
MRL = method reporting limit
bold = analyte detected above MDL.
J = The reported value is an estimate.
UJ = The analyte was not detected. The reported MDL/MRL is an estimate.
U = The analyte was not detected at or above the MDL.
Tissues are in micrograms per kilogram (µg/kg), wet weight

Notes:

MDL = method detection limit
MRL = method reporting limit
bold = analyte detected above MDL.
PAH = Polycyclic Aromatic Hydrodarbons
LPAH = Low Molecular Weight PAH
HPAH = High Molecular Weight PAH

J = The reported value is an estimate.
U = The analyte was not detected at or above the MDL.
All units are in micrograms per kilogram (µg/kg), dry weight
NC = Not calculated
KM = Kaplan–Meier-based with Efron's bias correction
KM, capped = Kaplan–Meier-based with Efron's bias correction, capped

Notes:

MDL = method detection limit
MRL = method reporting limit
bold = analyte detected above MDL.
PAH = Polycyclic Aromatic Hydrodarbons
LPAH = Low Molecular Weight PAH
HPAH = High Molecular Weight PAH

J = The reported value is an estimate.
U = The analyte was not detected at or above the MDL.
All units are in micrograms per kilogram (µg/kg), dry weight
NC = Not calculated
KM = Kaplan–Meier-based with Efron's bias correction
KM, capped = Kaplan–Meier-based with Efron's bias correction, capped

Notes:
MDL = method detection limit
MRL = method reporting limit
bold = analyte detected above MDL.
PAH = Polycyclic Aromatic Hydrodarbons
LPAH = Low Molecular Weight PAH
HPAH = High Molecular Weight PAH

J = The reported value is an estimate.
UJ = The analyte was not detected. The reported MDL/MRL is an estimate.
U = The analyte was not detected at or above the MDL.
All units are in micrograms per kilogram (µg/kg), dry weight
NC = Not calculated
KM = Kaplan–Meier-based with Efron's bias correction
KM, capped = Kaplan–Meier-based with Efron's bias correction, capped

Notes:

MDL = method detection limit
MRL = method reporting limit
bold = analyte detected above MDL.
J = The reported value is an estimate.
U = The analyte was not detected at or above the MDL.
PAH = Polycyclic Aromatic Hydrodarbons

LPAH = Low Molecular Weight PAH
HPAH = High Molecular Weight PAH
All units are in micrograms per kilogram (µg/kg), dry weight
NC = Not calculated
KM = Kaplan–Meier-based with Efron's bias correction
KM, capped = Kaplan–Meier-based with Efron's bias correction, capped

APPENDIX I
DATA SUMMARY AND STATISTICS

Table I-1
Data Summary for Landfill AOPC Samples
Bradford Island - Upland Operable Unit
(1 of 24)

Medium	Analyte Group	Preparation Fraction	Analyte	Depth Category	Unit	Number of Samples	Minimum MDL of NDs	Maximum MDL of NDs	Minimum MRL of NDs and Detects below MRL	Maximum MRL of NDs and Detects below MRL	Number of Non-Detects (below MDL)	Number of Detects Between MDL and MRL	Number of Detections Above MRL	Min Detected Value	Max Detected Value	Number of Detections	Detection Rate	Limited Data Set (< 8 samples)	Detection Rate > 5%?[1]

Notes

Table I-1
Data Summary for Landfill AOPC Samples
Bradford Island - Upland Operable Unit
(24 of 24)

Medium	Analyte Group	Preparation Fraction	Analyte	Depth Category	Unit	Number of Samples	Minimum MDL of NDs	Maximum MDL of NDs	Minimum MRL of NDs and Detects below MRL	Maximum MRL of NDs and Detects below MRL	Number of Non-Detects (below MDL)	Number of Detects Between MDL and MRL	Number of Detections Above MRL	Min Detected Value	Max Detected Value	Number of Detections	Detection Rate	Limited Data Set (< 8 samples)	Detection Rate > 5%?[1]

(1) Only evaluated for analytes with a sample size of 20 or more.
If all samples were NDs (detection rate=0%), or if there was only one distinct detected result, or if there were four or fewer samples and the data set contained NDs, the mean and standard deviation are not shown.
If there were two or more distinct detected results, but not all samples were detected results (i.e., detection rate = <100%), the mean and standard deviation were estimated by the Kaplan-Meier method.
Minimum and maximum detected values are not shown if all samples were NDs.
Minimum and maximum MDLs/MRLs for NDs are not shown if all samples had detected results.
The potentially mass wasting soil subset is comprised of the following samples: BIL01USE through BIL09USE, BIL13SSI, and L-01 through L-04.

'--' = Not evaluated
% = percent
Max = maximum
MDL = method detection limit
mg/kg = milligrams per kilogram
Min = minimum
MRL = methode reporting limit
MW Soil = Mass Wasting Soil
ND = non-detect
NWTPH-Dx = northwest total petroleum hydrocarbon-diesel-extended
NWTPH-Gx =northwest total petroleum hydrocarbon-gasoline-extended
PCB = polychlorinated biphenyl
SVOC = semi-volatile organic carbon
VOC = volatile organic carbon
ug/kg = micrograms per kilogram
ug/L = micrograms per liter

Notes
(1) Only evaluated for analytes with a sample size of 20 or more.
If all samples were NDs (detection rate=0%), or if there was only one distinct detected result, or if there were four or fewer samples and the data set contained NDs, the mean and standard deviation are not shown.
If there were two or more distinct detected results, but not all samples were detected results (i.e., detection rate = <100%), the mean and standard deviation were estimated by the Kaplan-Meier method.
Minimum and maximum detected values are not shown if all samples were NDs.
Minimum and maximum MDLs/MRLs for NDs are not shown if all samples had detected results.
The erodible soil subset is comprised of the following samples: SB-EUA, SB-EUB, SB-EUA-02, SB-EUA-04, SB-EUA-06, SB-EUA-08, SB-EUB-02, SB-EUB-03, SB-EUB-12, SB-EUB-15, and SB-04.

Notes
(1) Only evaluated for analytes with a sample size of 20 or more.
(2) In the absense of MDLs, number of non-detected where the MRL was used in lieu of an MDL.
If all samples were NDs (detection rate=0%), or if there was only one distinct detected result, or if there were four or fewer samples and the data set contained NDs, the mean and standard deviation are not shown.
If there were two or more distinct detected results, but not all samples were detected results (i.e., detection rate = <100%), the mean and standard deviation were estimated by the Kaplan-Meier method.
Minimum and maximum detected values are not shown if all samples were NDs.
Minimum and maximum MDLs for NDs are not shown if all samples had detected results.
For some (older) historial data, the MDLs were not available. In these cases, MRLs were used.
All concentrations are totals.

'--' = Not evaluated
% = percent
DP = Direct Push
Max = maximum
MDL = method detection limit

Table I-5
Data Summary for All Four AOPCs Combined
Bradford Island - Upland Operable Unit

Notes
(1) Only evaluated for analytes with a sample size of 20 or more.
If all samples were NDs (detection rate=0%), or if there was only one distinct detected result, or if there were four or fewer samples and the data set contained NDs, the mean and standard deviation are not shown.
If there were two or more distinct detected results, but not all samples were detected results (i.e., detection rate = <100%), the mean and standard deviation were estimated by the Kaplan-Meier method.
Minimum and maximum detected values are not shown if all samples were NDs.
Minimum and maximum MDLs for NDs are not shown if all samples had detected results.
For some (older) historial data, the MDLs were not available. In these cases, MRLs were used.
All concentrations are totals.

'--' = Not evaluated
% = percent
Max = maximum
MDL = method detection limit

Table I-6
Data Summary for Reference Area Samples
Bradford Island - Upland Operable Unit
(3 of 3)

Medium	Analyte Group	Preparation Fraction	Analyte	Depth Category	Unit	Number of Samples	Minimum MDL of NDs	Maximum MDL of NDs	Minimum MRL of NDs and Detects below MRL	Maximum MRL of NDs and Detects below MRL	Number of Non-Detects (below MDL)	Number of Detects Between MDL and MRL	Number of Detections Above MRL	Min Detected Value	Max Detected Value	Number of Detections	Detection Rate	Limited Data Set (< 8 samples)	Detection Rate > 5%?[1]

mg/kg = milligrams per kilogram
mg/L = milligrams per liter
Min = minimum
MRL = methode reporting limit
ND = non-detect
NWTPH-Dx = northwest total petroleum hydrocarbon-diesel-extended
NWTPH-Gx =northwest total petroleum hydrocarbon-gasoline-extended
SVOC = semi-volatile organic carbon
VOC = volatile organic carbon
ug/kg = micrograms per kilogram
ug/L = micrograms per liter

Notes

Table I-7
Data Summary for Pre-Sediment Removal Forebay Samples
Bradford Island - River Operable Unit
(3 of 3)

Medium	Analyte Group	Preparation Fraction	Analyte	Unit	Basis	Number of Samples	Minimum MDL of NDs	Maximum MDL of NDs	Minimum MRL of NDs and Detects below MRL	Maximum MRL of NDs and Detects below MRL	Number of NDs (below MDL)	Number of Detects Between MDL and MRL	Number of Detects Above MRL	Min Detected Value	Max Detected Value	Number of Detections	Detection Rate	Limited Data Set (< 8 samples)

% = percent
Dry = Dry weight
KM, capped = Kaplan–Meier-based with Efron's bias correction, capped
Max = maximum
MDL = method detection limit
mg/kg = milligrams per kilogram
mg/L = milligrams per liter
Min = minimum
MRL = method reporting limit
ND = non-detect
No. = number
NWTPH-Dx = northwest total petroleum hydrocarbon-diesel-extended
NWTPH-Gx =northwest total petroleum hydrocarbon-gasoline-extended
PCB = polychlorinated biphenyl
SVOC = semi-volatile organic carbon
ug/kg = micrograms per kilogram
ug/L = micrograms per liter
Wet = Wet Weight

Notes
% = percent
Dry = Dry weight
KM, capped = Kaplan–Meier-based with Efron's bias correction, capped
Max = maximum
MDL = method detection limit
mg/kg = milligrams per kilogram
mg/L = milligrams per liter
Min = minimum
MRL = methode reporting limit
ND = non-detect
No. = number
NWTPH-Dx = northwest total petroleum hydrocarbon-diesel-extended
NWTPH-Gx =northwest total petroleum hydrocarbon-gasoline-extended
PCB = polychlorinated biphenyl
SVOC = semi-volatile organic carbon
ug/kg = micrograms per kilogram
ug/L = micrograms per liter
Wet = Wet Weight

Notes
For C+F RDL values, the values shown are the sum of the RDLs and/or EMPCs for the ND column and filter results.

% = percent
Dry = Dry weight
KM, capped = Kaplan–Meier-based with Efron's bias correction, capped
EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
ND = non-detect
PCB = polychlorinated biphenyl
pg/kg = picograms per kilogram
pg/L = picograms per liter
RDL = reported detection limit
Wet = Wet Weight

Notes

Table I-9a
Data Summary for Targeted Forebay Samples
Bradford Island - River Operable Unit
(5 of 5)

Medium	Analyte Group	Preparation Fraction	Analyte	Unit	Basis	Number of Samples	Minimum MDL of NDs	Maximum MDL of NDs	Minimum MRL of NDs and Detects below MRL	Maximum MRL of NDs and Detects below MRL	Number of NDs (below MDL)	Number of Detects Between MDL and MRL	Number of Detects Above MRL	Min Detected Value	Max Detected Value	Number of Detections	Detection Rate	Limited Data Set (< 8 samples)

% = percent
Dry = Dry weight
KM, capped = Kaplan–Meier-based with Efron's bias correction, capped
Max = maximum
MDL = method detection limit
mg/kg = milligrams per kilogram
mg/L = milligrams per liter
Min = minimum
MRL = methode reporting limit
ND = non-detect
No. = number
NWTPH-Dx = northwest total petroleum hydrocarbon-diesel-extended
NWTPH-Gx =northwest total petroleum hydrocarbon-gasoline-extended
PCB = polychlorinated biphenyl
SVOC = semi-volatile organic carbon
ug/kg = micrograms per kilogram
ug/L = micrograms per liter
Wet = Wet Weight

Clam	Total		Total PCBs As Congeners (KM, capped)	ug/kg	Wet	1	-	-	-	-	-	-	21.4	21.4	1	100%	Yes

Notes
% = percent
Dry = Dry weight
KM, capped = Kaplan–Meier-based with Efron's bias correction, capped
EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
ND = non-detect
PCB = polychlorinated biphenyl
pg/kg = picograms per kilogram
RDL = reported detection limit
Wet = Wet Weight

Table I-11a
Data Summary for Random Reference Samples
Bradford Island - River Operable Unit
(7 of 7)

Medium	Analyte Group	Preparation Fraction	Analyte	Unit	Basis	Number of Samples	Minimum MDL of NDs	Maximum MDL of NDs	Minimum MRL of NDs and Detects below MRL	Maximum MRL of NDs and Detects below MRL	Number of NDs (below MDL)	Number of Detects Between MDL and MRL	Number of Detects Above MRL	Min Detected Value	Max Detected Value	Number of Detections	Detection Rate	Limited Data Set (< 8 samples)

Notes

% = percent
Dry = Dry weight
Max = maximum
MDL = method detection limit
mg/kg = milligrams per kilogram
mg/L = milligrams per liter
Min = minimum
MRL = methode reporting limit
ND = non-detect
KM, capped = Kaplan–Meier-based with Efron's bias correction, capped
No. = number
NWTPH-Dx = northwest total petroleum hydrocarbon-diesel-extended
NWTPH-Gx =northwest total petroleum hydrocarbon-gasoline-extended
PCB = polychlorinated biphenyl
SVOC = semi-volatile organic carbon
ug/kg = micrograms per kilogram
ug/L = micrograms per liter
Wet = Wet Weight

Notes
For C+F RDL values, the values shown are the sum of the RDLs and/or EMPCs for the ND column and filter results.

% = percent
Dry = Dry weight
KM, capped = Kaplan–Meier-based with Efron's bias correction, capped
EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
ND = non-detect
PCB = polychlorinated biphenyl
pg/kg = picograms per kilogram
pg/L = picograms per liter
RDL = reported detection limit
Wet = Wet Weight

Notes
Only those analytes with at least 2 detected results are shown on this table.
If not all samples were detected results (i.e., detection rate = <100%), the mean and standard deviation were estimated by the Kaplan-Meier method.
The potentially mass wasting soil subset is comprised of the following samples: BIL01USE through BIL09USE, BIL13SSI, and L-01 through L-04.

% = percent
KM = Kaplan-Meier
MDL = method detection limit
mg/kg = milligrams per kilogram
MRL = method reporting limit
MW Soil = Mass Wasting Soil

Notes
Only those analytes with at least 2 detected results are shown on this table.
If not all samples were detected results (i.e., detection rate = <100%), the mean and standard deviation were estimated by the Kaplan-Meier method.
The erodible soil subset is comprised of the following samples: SB-EUA, SB-EUB, SB-EUA-02, SB-EUA-04, SB-EUA-06, SB-EUA-08, SB-EUB-02, SB-EUB-03, SB-EUB-12, SB-EUB-15, and SB-04.

% = percent
DP = Direct Push
KM = Kaplan-Meier

Notes
Only those analytes with at least 2 detected results are shown on this table.
If not all samples were detected results (i.e., detection rate = <100%), the mean and standard deviation were estimated by the Kaplan-Meier method.

% = percent
DP = Direct Push
KM = Kaplan-Meier
MDL = method detection limit
mg/kg = milligrams per kilogram
MRL = method reporting limit
MW Soil = Mass Wasting Soil
ND = non-detect
NWTPH-Dx = northwest total petroleum hydrocarbon-diesel-extended
NWTPH-Gx =northwest total petroleum hydrocarbon-gasoline-extended
PCB = polychlorinated biphenyl
SD = standard deviation
SVOC = semi-volatile organic carbon
ug/kg = micrograms per kilogram
ug/L = micrograms per liter
ug/m^3 = micrograms per cubic meters
UCL = upper confidence limit

Table I-17
Data Summary for Reference Area Samples
Bradford Island - Upland Operable Unit
(2 of 2)

Notes
For analytes with less than 100% detection rate, but at least one detection, the maximum detected value was assessed as the non-parametric UPL.
For analytes with no detections (0% detection rate), the maximum MDL and maximum MRL are shown (MDL/MRL) as the non-paramentric UPL.
UPLs were not calculated when less than 8 samples were available (i.e., groundwater is not shown because there were less than 8 samples).

% = percent
Max = maximum
MDL = method detection limit
mg/kg = milligrams per kilogram
MRL = methode reporting limit
SVOC = semi-volatile organic carbon
ug/kg = micrograms per kilogram
UPL = upper prediction limit

Statistical Summary for Random Forebay Samples
Bradford Island - River Operable Unit
(4 of 4)

											Statistics - ND censored at the MDL				Statistics - ND censored at the MRL			
Medium	Analyte Group	Preparation Fraction	Analyte	Unit	Basis	Number of Samples	Number of Detections	Mean of Detects	Median of Detects	Maximum Detected Value	KM-Mean	KM-SD	Final 95% UCL	UCL Type	KM-Mean	KM-SD	Final 95% UCL	UCL Type
Clam	SVOCs	Total	Pyrene	ug/kg	Wet	19	7	2.96	2.40	6.30	2.23	1.15	2.76	95% KM (t) UCL	2.26	1.14	2.80	95% KM (t) UCL

Notes
Only those analytes with at least 2 detected results are shown on this table.
If not all samples were detected results (i.e., detection rate = <100%), the mean and standard deviation were estimated by the Kaplan-Meier method.

% = percent
Dry = Dry weight
KM = Kaplan-Meier
MDL = method detection limit
mg/kg = milligrams per kilogram
mg/L = milligrams per liter
MRL = method reporting limit
ND = non-detect
NWTPH-Dx = northwest total petroleum hydrocarbon-diesel-extended
PCB = polychlorinated biphenyl
SD = standard deviation
SVOC = semi-volatile organic carbon
ug/kg = micrograms per kilogram
ug/L = micrograms per liter
UCL = upper confidence limit
Wet = Wet Weight

Notes
Only those analytes with at least 2 detected results are shown on this table.
If not all samples were detected results (i.e., detection rate = <100%), the mean and standard deviation were estimated by the Kaplan-Meier method.

% = percent
Dry = Dry weight
EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
KM = Kaplan-Meier

Notes
For analytes with less than 100% detection rate, but at least one detection, the maximum detected value was assessed as the non-parametric UPL.
For analytes with no detections (0% detection rate), the maximum MDL and maximum MRL are shown (MDL/MRL) as the non-paramentric UPL.
UPLs were not calculated when less than 8 samples were available (i.e., surface water is not shown because there were less than 8 samples).

% = percent
Dry = Dry weight
MDL = method detection limit
mg/kg = milligrams per kilogram
MRL = method reporting limit
NWTPH-Dx = northwest total petroleum hydrocarbon-diesel-extended
PCB = polychlorinated biphenyl
SD = standard deviation
SVOC = semi-volatile organic carbon
ug/kg = micrograms per kilogram
UPL = upper prediction limit
Wet = Wet Weight

Notes
For analytes with less than 100% detection rate, but at least one detection, the maximum detected value was assessed as the non-parametric UPL.
For PCB congeners with no detections (0% detection rate), the maximum of the RDL and EMPC was assessed as the non-parametric UPL.
UPLs were not calculated when less than 8 samples were available (i.e., surface water is not shown because there were less than 8 samples).

% = percent
Dry = Dry weight
EMPC = The analyte was not positively identified; the associated numerical value is the Estimated Maximum Potential Concentration.
ND = non-detect
NWTPH-Dx = northwest total petroleum hydrocarbon-diesel-extended
PCB = polychlorinated biphenyl
pg/kg = picrograms per kilogram
ug/kg = micrograms per kilogram
RDL = reported detection limit
UPL = upper prediction limit
Wet = Wet Weight

APPENDIX J
SCREENING LEVEL VALUES

J.0 Selection of Screening Level Values

For each media, screening level values (SLVs) were selected for human and ecological receptors, based on a hierarchy of sources (Tables J-1 through J-3). These SLVs were developed based on discussions with the United States Army Corps of Engineers (USACE) and the (Oregon) Department of Environmental Quality (DEQ) during the meetings held from December to February, 2010, as documented in Data Sufficiency Report (DSR) Meeting Minutes Memorandum (URS 2010a) and River Operable Unit (OU) and Upland OU DSR Response to Comments (RTC) (URS 2010b,c). The agreed-upon hierarchy of Human Health SLVs is presented in Section J.1 and the hierarchy of Ecological SLVs is presented in Section J.2. Section J.3 presents the SLVs (generally the more conservative of the human health and ecological SLVs, unless only one is applicable) used for identifying preliminary contaminants of potential concern (COPCs) for discussion of nature and extent of contamination (Section 9.0 of the RI Report). Tables J-4 and J-5 present the SLVs for specific human health and ecological receptors, respectively, used to identify COPCs in the human health risk assessment (Appendix M) and contaminants of potential ecological concern (CPECs) in the ecological risk assessment (Appendix N).

J.1 Human Health SLV Hierarchy

Site-specific reference concentrations were used to establish SLVs for inorganic analytes in soil and sediment. The Upland OU reference soil concentrations were established using 14 surface soil samples from an undeveloped portion of Bradford Island (see Figure 6-1 of the RI Report). The River OU reference sediment concentrations were established using 18 sediment samples from an upstream area (see Figure 6-2 of the RI Report). For Upland OU soil and River OU sediment, 95% upper prediction limits (UPLs) were calculated (Appendix I, Tables I-17 and I-20). These site-specific reference area 95% UPLs were used in the selection of SLVs for human and ecological receptors in soil and sediment, as described below.

The following summarizes the human health SLV hierarchy (Tables J-1 and J-4):

J.1.1 Soil

Except for polychlorinated biphenyl (PCB) Aroclors, the SLV is selected as the higher of the 95% UPL of site-specific Reference Area soil concentrations, for inorganic analytes only, and the human health SLVs, in order of preference as follows:

1. .DEQ's occupational, construction, and excavation worker Risk-based Concentrations (RBCs) (2003, updated 2009)
2. USEPA's industrial Regional Screening Levels (RSLs) (2010)

For Total PCBs (as Aroclors) and for individual Aroclors, USEPA's non-residential RSLs were used; DEQ's non-residential RBCs were not used. In the absence of individual Aroclor RSLs, the Total PCBs SLV was used for both individual Aroclors and Total PCBs (as Aroclors).

J.1.2 Sediment and Erodible/Mass Wasting Soil

The highest value of the following:

- 95% UPL of site-specific Reference Area sediment concentrations, for inorganic analytes only.

- DEQ's Sediment Bioaccumulation SLVs protective of humans (general and subsistence) (2007).

J.1.3 Soil Gas

1. DEQ's occupational soil gas RBCs (2003, updated 2009).

2. USEPA's Industrial Ambient Air RSLs multiplied by a factor of 1000 (2010).

J.1.4 Groundwater, Seep Water, and Surface Water

Ingestion and Direct Contact Pathways

Except for PCB Aroclors, the order of preference for Ingestion/Direct Contact SLVs is as follows:

1. DEQ's Groundwater RBCs (all groundwater RBCs) (2003, updated 2009).

2. USEPA's Tapwater RSLs (2010).

3. DEQ's Maximum Contaminant Levels (MCLs) (Accessed 2010; DEQ 2010a).

For Total PCBs (as Aroclors) and for individual Aroclors, USEPA's tapwater RSLs were the first choice; DEQ's Groundwater RBCs were not used since they were not Aroclor-specific values.

Discharge to Surface Water and Bioaccumulation Pathways

1. USEPA's National Ambient Water Quality Criteria (NAWQC) (2009) for freshwater protective of human health (water + organisms, organism only).

2. DEQ's human health-based Water Quality Criteria (WQC), Table 33A (OAR, Section 340-041; DEQ 2009a).

3. DEQ's human health-based WQC, Table 33B (OAR, Section 340-041; DEQ 2009a).

J.1.5 Tissue

1. DEQ's Acceptable Tissue Levels (ATLs), on wet weight basis, protective of humans subsistence/recreational (carcinogens and non-carcinogens) (2007) for subsistence fishers and for recreational fishers.

2. A few additional COIs were detected in crayfish and smallmouth bass tissue for which ATLs were not provided in DEQ (2007). They include a few inorganics, phthalates, and polycyclic aromatic hydrocarbons (PAHs). PAHs are generally considered to exhibit limited bioaccumulation in fish tissue due to the capacity of fish to metabolize PAHs. However, several PAHs were detected in smallmouth bass and crayfish tissue. Therefore, they were categorized into carcinogenic and non-

carcinogenic PAHs. The lower of DEQ's ATLs for fluoranthene and pyrene was applied to the non-carcinogenic PAHs. ATLs were estimated for the phthalates and carcinogenic PAHs by applying DEQ's methodology for ATL development and using cancer potency values from USEPA's IRIS database. The COIs for which ATLs were developed included B2EHP, butylbenzyl phthalate, di-n-butyl phthalate, di-n-octyl phthalate and eight carcinogenic PAHs (benzo(a)anthracene, benzo(b)flouranthene, benzo(g,h,i)perylene, benzo(k)flouranthene, benzo(a)pyrene, chrysene, dibenz(a,h)anthracene and indeno (1,2,3-cd)pyrene) (Table J-2).

J.2 Ecological SLV Hierarchy

As was done for the human health SLVs, site-specific reference 95% UPLs were used to establish ecological SLVs for inorganic analytes in soil and sediment. The following summarizes the ecological SLV hierarchy (Tables J-1 and J-5):

For all media, each individual Aroclor was screened against the Aroclor-specific SLV, unless the SLV for total PCBs is more conservative, in which case the SLV for total PCBs was applied to the individual Aroclor. If there is no Aroclor-specific SLV, each Aroclor was screened against the Total PCBs SLV. The Total PCBs (as Aroclors) was also screened against the Total PCBs SLV.

J.2.1 Soil

The SLV is selected as the higher of the 95% UPL of site-specific Reference Area soil concentrations, for inorganic analytes only, and the ecological SLVs, in order of preference as follows:

1. USEPA's Ecological Soil Screening Levels (EcoSSLs) protective of plants, soil invertebrates, birds, and mammals (2005-2008).
2. DEQ's Level II SLVs for soil protective of plants, soil invertebrates, birds, and mammals (DEQ 2001).
3. Oak Ridge National Laboratory's (ORNL's) Preliminary Remediation Goals (PRGs) for ecological endpoints protective of birds and mammals (Efroymson et al. 1997c) and ORNL publications with screening levels for plants and soil invertebrates (Efroymson et al. 1997a,b).
4. USEPA's Toxicity Reference Values (TRVs) protective of plants and invertebrates (1999b).

J.2.2 Sediment and Erodible/Mass Wasting Soil:

The SLV is selected as the higher of the 95% UPL of site-specific Reference Area soil concentrations, for inorganic analytes only, and the lowest of the following ecological SLVs:

- DEQ's Sediment Bioaccumulation SLVs protective of birds, mammals, and fish (2007).
- DEQ's Level II SLVs for freshwater sediments protective of benthic invertebrates (2001).

J.2.3 Groundwater, Seep Water, and Surface Water

1. USEPA's NAWQC for freshwater protective of aquatic life (Criteria Continuous Concentrations; 2009).
2. DEQ's WQC protective of freshwater organisms (Criteria Continuous Concentrations; OAR, Section 340-041, Table 33A; DEQ 2009a).
3. DEQ's Level II SLVs for freshwater protective of aquatic life, birds, and mammals (2001).
4. ORNL's toxicological benchmarks for freshwater protective of aquatic biota (Suter and Tsao 1996).
5. USEPA's Freshwater Chronic Values (FCVs) for PAHs protective of aquatic life (2003b).
6. Canadian Water Quality Guidelines for the Protection of Aquatic Life (Canadian Council of Resource and Environment Ministers 2007).
7. NOAA's Screening Quick Reference Tables (SQuiRTs) for freshwater (Buchman 2008).

J.2.4 Tissue

1. DEQ's ATLs protective of birds and mammals and Critical Tissue Levels (CTLs) protective of fish and shellfish (2007).
2. A few additional COIs were detected in tissue for which ATLs were not provided in DEQ (2007). They include a few inorganics (aluminum, thallium, vanadium, and zinc), phthalates, and PAHs. For the PAHs, the ATLs and CTLs for fluoranthene were used as surrogate screening levels for individual low molecular weight PAHs (LPAHs) detected tissue, and the ATLs/CTLs for pyrene were used to screen individual high molecular weight PAHs (HPAHs) detected in tissue. ATLs and CTLs were estimated for the three phthalates (bis[2-ethyl-hexyl]phthalate, butyl benzyl phthalate, and di-n-butyl phthalate) (Table J-3) by applying DEQ's methodology for ATL and CTL development and using ORNL TRVs (Sample et al 1996) for the mink and great blue heron to be consistent with DEQ's guidance (2007).

   ATLs and CTLs were not developed for the inorganics in tissue for the following reasons**:**

   a. Concentrations of inorganics in Forebay sediment were not elevated above the Reference Area concentrations (Appendix L, Tables L-4 to L-6).
   b. Concentrations of thallium and vanadium in Forebay clams, crayfish, and smallmouth bass were not elevated above Reference Area concentrations (Appendix L, Tables L-4 to L-6).
   c. Concentrations of aluminum and zinc in Forebay clams and crayfish were not elevated above the Reference Area concentrations (Appendix L, Tables L-4 to L-6).
   d. Although aluminum and zinc concentrations in Forebay bass tissue were found to

be statistically higher than the Reference Area bass tissue concentrations in the population-to-population evaluation (Table 8-3 and Appendix L, Tables L-4 to L-6), the Forebay smallmouth bass tissue had 95% UCL concentrations (Appendix I, Table I-18a) lower than the Reference Area maximum detected concentrations:

- Aluminum – Small mouth bass 95% UCL for the Forebay was 7.11 mg/kg compared to the Reference Area maximum concentration of 10.1 mg/kg.
- Zinc – Small mouth bass 95% UCL for the Forebay was 14.9 mg/kg compared to the Reference Area maximum concentration of 15.5 mg/kg.

The tissue SLVs were compared to the types of tissue that correspond to the dietary intake assumptions:

- SLVs protective of fish/shellfish were compared to all tissue data
- SLVs protective of birds were compared to smallmouth bass tissue data
- SLVs protective of mammals were compared to crayfish, sculpin, and smallmouth bass data (as three distinct datasets; no combination of tissues indicating dietary proportions were performed for the Screening Assessment)

J.3 Minimum Potentially Applicable SLVs Used to Identify preliminary COPCs for Nature and Extent

This section summarizes the selected minimum potentially applicable SLVs by media used to identify preliminary COPCs for discussion of nature and extent of contamination (Section 9.0 of the RI Report).

The SLVs used for identification of preliminary COPCs are as follows:

J.3.1 Soil

- Inorganic COIs in Soil (0-1 and 0-3 feet bgs) – The greater of the Reference Area 95% upper prediction limit (UPLs) and the toxicity based SLVs (lower of the human health and ecological SLVs) based on exposure to individual COIs. The 95% UPL was constructed for the next single future observation with a false positive rate for all four AOPCs combined likely greater than 5% due to the multiple comparisons. This is a conservative approach for the four AOPCs combined because skewing the data to a higher false positive rate allows for a lower chance of false negatives.
- Organic COIs in Soil (0-1 and 0-3 feet bgs) – The lower of the human health and ecological toxicity-based SLVs based on exposure to individual COIs.
- Inorganic COIs in Soil (0-10 feet bgs and > 10 feet bgs) – The greater of the Reference Area 95% UPLs and the human health toxicity based SLVs based on exposure to individual COIs. Ecological SLVs are not considered because, as noted in the RI/FS MP (URS 2007a), soil deeper than 3 feet is not relevant for ecological risk assessment and soils shallower than 3 feet bgs have already been considered in the other depth intervals.
- Organic COIs in Soil (0-10 feet bgs and > 10 feet bgs) – The selected human health

toxicity-based SLVs based on exposure to individual COIs. Ecological SLVs are not considered because, as noted in the RI/FS MP (URS 2007a), soil deeper than 3 feet is not relevant for ecological risk assessment and soils shallower than 3 feet bgs have already been considered in the other depth intervals.

J.3.2 Sediment

- Inorganic COIs– The greater of the Reference Area 95% UPLs and the toxicity based SLVs (lower of the human health and ecological SLVs) based on exposure to individual COIs.
- Organic COIs – The lower of the human health and ecological toxicity-based SLVs based on exposure to individual COIs.

J.3.3 Soil Gas

- Inorganic and Organic COIs – The human health toxicity-based SLVs based on exposure to individual COIs.

J.3.4 Groundwater, Seep Water, and Surface Water

- Dissolved metals and all organic COIs – The lower of the selected direct contact and groundwater-to-surface water/bioaccumulative toxicity-based water SLVs established for human and/or ecological receptors based on exposure to individual COIs.
- Total metals – the lower of the selected direct contact and groundwater-to-surface water/bioaccumulation toxicity-based water SLVs established for human health toxicity only (because ecological SLVs are not based on total metals).

J.3.5 Tissue

- Inorganic and Organic COIs – The lower of the human health and ecological toxicity-based SLVs based on exposure to individual COIs for crayfish and smallmouth bass.
- Inorganic and Organic COIs – The lowest ecological toxicity-based SLVs based on exposure to individual COIs for clam and sculpin (these tissues are not relevant for the human health pathway).

Note

Human Health Screening Levels correspond to a target risk of 1E-06 for carcinogens and target hazard quotient of 1.0 for non-carcinogens for the selected receptor and pathway.
MCLs incorporate considerations of risk as well as feasibility in attaining target level.
- = No benchmark available
DEQ = Oregon Department of Environmental Quality
Eco SSL = Ecological Soil Screening Level
USEPA = US Environmental Protection Agency
HMW = High Molecular Weight
LMW = Low Molecular Weight
MCL = Maximum Contaminant Level
mg/kg = milligram per kilogram dry weight
ORNL = Oak Ridge National Laboratory
PAH = Polycyclic Aromatic Hydrocarbons
PRG = Preliminary Remediation Goal
RBC = Risk Based Concentrations
RI = Remedial Investigation
RSL = Regional Screening Level
SLV = Screening Level Value
TRV = Toxicity Reference Value
UPL = Upper Prediction Limit

* = Eco SSL is dependent on pH.

** = Eco SSL is a determination of the geochemical conditions (i.e., pH and Eh at a minimum) of the environmental setting, as well as the presence of iron floc and the toxic metals, is critical to the determination of the relative importance of iron at a site.

*** = PAH Eco SSLs are based on Total LMW PAHs (Invert. Eco SSL = 29 mg/kg and Mammal Eco SSL = 100 mg/kg) and Total HMW PAHs (Invert. Eco SSL = 18 mg/kg and Mammal Eco SSL = 1.1 mg/kg).
LMW PAHs include: 2-Methylnaphthalene, Acenaphthene, Acenaphthylene, Anthracene, Fluorene, Naphthalene, and Phenanthrene.
HMW PAHs include : Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(j,k)flouranthenes, Benzo(k)fluoranthene, Chrysene, Dibenzo(a,h)anthracene, Fluoranthene, Indeno(1,2,3-cd)pyrene, and Pyrene.

[a] Aroclor 1221 was used as a surrogate because there was no chemical specific SLV.
[b] Toxic Equivalency Factors for Benzo(g,h,i)perylene (0.01) was applied to the Benzo(a)pyrene SLV because there was no chemical specific SLV.
[c] BHC alpha was used as a surrogate, because there was no chemical-specific SLV, and BHC alpha was the lowest BHC.
[d] Chlordane (technical) was used as a surrogate because there was no chemical specific SLV.
[e] 1,3- Dichloropropene was used as a surrogate because there was no chemical specific SLV.
[f] Endosulfan was used as a surrogate because there was no chemical specific SLV.
[g] The SLV for naphthalene was used as a surrogate because there was no chemical-specific SLV.
[h] Xylene (mixed) was used as a surrogate because there was no chemical specific SLV.
[i] Dibutyltin compounds was used as a surrogate because there was no chemical specific SLV.
[j] Manganese (water) was used as opposed to Manganese (diet).
[k] Cadmium (diet) was used as opposed to Cadmium (water).
[l] Bis(2-ethylhexyl) Phthalate was used as a surrogate, because there was no chemical-specific SLV, and Bis(2-ethylhexyl) Phthalate was the lowest phthalate.
[m] 1,4- Dichlorobenzene was used as a surrogate because there was no chemical specific SLV.
[n] 1,2- Dichloropropane was used as a surrogate because there was no chemical specific SLV.
[o] Phenol was used as a surrogate because there was no chemical specific SLV.
[p] 2-Methylphenol was used as a surrogate because there was no chemical specific SLV.
[q] 2-Nitroaniline was used as a surrogate because there was no chemical specific SLV.
[r] Bis(2-chloroethyl) ether was used as a surrogate because there was no chemical specific SLV.
[s] Bromodichloromethane was used as a surrogate because there was no chemical specific SLV.
[t] Endrin was used as a surrogate because there was no chemical specific SLV.
[u] DEQ 2003. Risk-Based Decision Making for the Remediation of Petroleum-Contaminated Sites. Land Quality Division, Environmental Cleanup and Tanks Program. September. Updated 2009
[v] US Environmental Protection Agency (USEPA) 2009. Regional Screening Level. December.
[w] **Human Health Hierarchical SLV Selection: 1. DEQ RBCs (the minimum of Ingest Occupational, Ingest Construction, Ingest Excavation, Volatize Outdoor, and Vapor Intrusion) and 2. USEPA Soil RSL.**
[x] Toluene was used as a surrogate because there was no chemical specific SLV.
[y] Heptachlor was used as a surrogate because there was no chemical specific SLV.
[z] Acetone was used as a surrogate because there was no chemical specific SLV.
[ab] The lowest PRG (mammal) for Total PCBs was used as a surrogate because the SLV is based on bioaccumulation and is more conservative than the DEQ Level II individual aroclor SLVs and Total PCB SLV, which do not take into account bioaccumulation.
[ab] Benzo(a)anthracene was used as a surrogate because there was no chemical-specific SLV, and benzo(a)anthracene had the lowest SLV of the HMW PAHs.
[ac] BHC gamma was used as a surrogate, because there was no chemical-specific SLV, and BHC gamma was the lowest BHC.
[ad] di-n-butyl Phthalate was used as a surrogate because there was no chemical specific SLV, and di-n-butyl Phthalate was the lowest of the phthalates.
[ae] Chlordane (CAS # 57-74-9) was used as a surrogate.
[af] Naphthalene was used as a surrogate because there was no chemical-specific SLV, and naphthalene had the lowest SLV of the LMW PAHs.
[ag] Tributyltin oxide was used as a surrogate, because there was no chemical-specific SLV.
[ah] 1,3- Dichlorobenzene was used as a surrogate because there was no chemical specific SLV, and it had the SLV lowest of the non-methylbenzenes.
[ai] 1,2- Dichloroethane was used as a surrogate because there was no chemical specific SLV.
[aj] DDT (and metabolites) was used as a surrogate because there was no chemical specific SLV, and DDT was the lowest of the herbicides/pesticides.
[ak] Dichloromethane was used as a surrogate because there was no chemical specific SLV.
[al] Carbon tetrachloride was used as a surrogate because there was no chemical specific SLV.

[bk] **Ecological Hierarchical SLV Selection: 1. USEPA Eco SSL, 2. DEQ Level II SLV, 3. ORNL, 4. USEPA TRV (Plants and Soil Invertebrates Only).**
[bl] **The Soil SLV Selection for Preliminary COPC Screening: <u>For 0-1 and 0-3 ft bgs -</u> Most conservative of the Selected Human Health and Ecological SLVs with Surrogates. <u>For 0-10 ft bgs -</u> Selected Human Health SLV with Surrogates.**
[bm] The lowest Eco SSL (mammal) for Dieldrin was used as a surrogate because the SLV is based on bioaccumulation and is more conservative than the DEQ Level II Endrin SLV, which does not take into account bioaccumulation.
[bn] The lowest PRG (avian) for Mercury was used as a surrogate because the SLV is based on bioaccumulation and is more conservative than the DEQ Level II Mercury SLV, which does not take into account bioaccumulation.
[bo] Tributyltin was used as a surrogate because there was no chemical specific SLV.
[bp] The RSL for Total PCBs was selected as the SLV per DEQ.
[bq] The SLV for Xylenes (mixed) was selected as a surrogate because there was no chemical specific SLV.
[br] The SLV for 2,4,5-TP (Silvex) was selected as a surrogate because there was no chemical specific SLV.
[bs] The SLV for dibenzofuran was selected as a surrogate because there was no chemical specific SLV.
[bt] The SLV for anthracene was selected as a surrogate because there was no chemical specific SLV.
[bu] The SLV for isopropylbenzene (cumene) was selected as a surrogate because there was no chemical specific SLV.
[bv] The SLV for chromium IV was used for total chromium, as a worst case scenario
[bw] Benzo(k)fluoranthene was used as a surrogate because there was no chemical-specific SLV.
[bx] Benzo(b)fluoranthene was used as a surrogate because there was no chemical-specific SLV and benzo(b)fluoranthene had the lowest SLV of the benzofluoranthenes.

Note:																										
Human Health Screening Levels correspond to a target risk of 1E-06 for carcinogens and target hazard quotient of 1.0 for non-carcinogens for the selected receptor and pathway. MCLs incorporate considerations of risk as well as feasibility in attaining target level.																										
- = No benchmark available or available benchmark not needed, based on hierarchy of sources																										
DEQ = Oregon Department of Environmental Quality																										
USEPA = US Environmental Protection Agency																										
GW = groundwater																										
MCL = Maximum Contaminant Level																										
ug/L = microgram per liter																										
NOAA = National Oceanic and Atmospheric Administration																										
NRWQC = National Recommended Water Quality Criteria																										
ORNL = Oak Ridge National Laboratory																										
PAH = Polycyclic aromatic hydrocarbon																										
RBC = Risk Based Concentrations																										
RI = Remedial Investigation																										
RSL = Regional Screening Level																										
SLV = Screening Level Value																										
SQuiRTs = Screening Quick Reference Tables																										
WQC = Water Quality Criteria																										
[a] Vanadium, Metallic was used.																										
[b] Benzo(a)pyrene was used as a surrogate because there was no chemical-specific SLV.																										
[c] BHC alpha was used as a surrogate, because there was no chemical-specific SLV, and BHC alpha was the lowest BHC.																										
[d] Chlordane was used as a surrogate.																										
[e] Dichloropropene, 1,3- was used as a surrogate.																										
[f] 4,4'-DDT was used as a surrogate because the Aquatic Level II SLV is for DDT and its metabolites and is more conservative than the Avian Level II SLV for DDE.																										
[g] Tributyltin compounds was used as a surrogate because there was no chemical specific SLV.																										
[h] Xylene (mixed) was used as a surrogate because there was no chemical specific SLV.																										
[i] Manganese (water) was used as opposed to Manganese (diet).																										
[j] Naphthalene was used as a surrogate because there was no chemical-specific SLV.																										
[k] Dibutyltin compounds was used as a surrogate because there was no chemical specific SLV.																										
[l] Cadmium (water) was used.

[q] DEQ. Water Quality Criteria for freshwater organisms (Oregon Administrative rules, section 340-041, Table 33A).																										
[r] 1,2,4- Trichlorobenzene was used as a surrogate because there was no chemical specific SLV.																										
[s] Groundwater HH Hierarchical SLV Selection for Direct Contact: 1. DEQ RBCs (the minimum of Ingest Residential, Ingest Occupational, Volatilize Outdoor, Vapor Intrusion, Excavation), 2. USEPA RSL, and 3. DEQ MCL. Surface Water HH Hierarchical SLV Selection for Direct Contact: 1) DEQ RBCs (the minimum of Ingest Residential and Ingest Occupational) and 2-6 same as groundwater; this does not result in a change of the selected SLV.																										
[t] 1,2- Dichloropropane was used as a surrogate because there was no chemical specific SLV.																										
[u] Phenol was used as a surrogate because there was no chemical specific SLV.																										
[v] 2- Methylphenol was used as a surrogate because there was no chemical specific SLV.																										
[w] 2- Nitroaniline was used as a surrogate because there was no chemical specific SLV.																										
[x] Bromodichloromethane was used as a surrogate because there was no chemical specific SLV.																										
[y] Ethylbenzene was used as a surrogate because there was no chemical specific SLV.																										
[z] Bis(2-ethyl hexyl) phthalate was used as a surrogate because there was no chemical specific SLV, and Bis(2-ethyl hexyl) phthalate was the lowest of the pthalates.																										
[ab] Endrin was used as a surrogate because there was no chemical specific SLV.																										
[ab] Tributyltin was used as a surrogate because there was no chemical specific SLV.																										
[ac] Chlordane (CAS # 57749) was used as a surrogate because there was no chemical specific SLV.																										
[ad] Chromium (III) was used as a surrogate because there was no chemical specific SLV.																										
[ae] 2,4-D was used as a surrogate because there was no chemical specific SLV.

[ak] Ecological Hierarchical SLV Selection: 1. USEPA Freshwater NAWQC, 2. ODEQ Freshwater Table 33A WQC, 3. DEQ Level II SLVs (lowest), 4. ORNL Tier II Value, 5. USEPA PAH FCV, 6. Canadian Freshwater WQG, 7. NOAA SQuiRTs Freshwater Chronic.																										
[al] For organic analytes, most conservative of Human Health and Ecological Selected Water Screening Levels with Surrogates. For inorganic analytes, selected Human Health Selected Screening Level.																										
[am] For all analytes, most conservative of Human Health and Ecological Selected Water Screening Levels with Surrogates.																										
[an] Total PCBs was used as a surrogate because the SLV is more conservative than the individual aroclor SLVs.																										
[ao] 4-(2,4-Dichlorophenoxy)butyric Acid was used as a surrogate because there was no chemical specific SLV.																										
[ap] 1,4-Dichlorobenzene was used as a surrogate because there was no chemical specific SLV.																										
[aq] The SLV for anthracene was used as a surrogate because there was no chemical specific SLV.																										
[ar] Diethyl Phthalate was used as a surrogate because there was no chemical specific SLV.																										
[as] Endosulfan was used as a surrogate because there was no chemical specific SLV.																										
[at] The RSL for Total PCBs was selected as the SLV per DEQ.																										
[au] Toxic Equivalency Factors for Benzo(g,h,i)perylene (0.01) was applied to the Benzo(a)pyrene SLV because there was no chemical specific SLV.																										
[av] Benzo(k)fluoranthene was used as a surrogate because there was no chemical-specific SLV.																										
[aw] Benzo(b)fluoranthene was used as a surrogate because there was no chemical-specific SLV and benzo(b)fluoranthene had the lowest SLV of the benzofluoranthenes.																										
[ax] As per EPA guidance, certain NRWQC were adjusted for hardness based on a site-specific hardness value of 60 mg/L (minimum value of 54 mg/L and maximum value of 64 mg/L).																										
[ay] For these two PAHs, the ecological SLV hierarchy presented in footnote "ak" was not followed. As per the response to DEQ's Specific Comment #26 (see Appendix P), EPA's FCVs were used instead (EPA 2003).
