RE: Annual Biosolids Report 2018

Dear Mr. Kennedy-

Please find enclosed a copy of the 2018 Annual Biosolids Report for the H2O & S WWTP.

We contracted with Zwald Transport of Tillamook to do our annual biosolids hauling in 2018. On August 10, 2018, we sent four loads of 5,500 gallons each to the field in Logsdan, Oregon we call Wycaver #3. We applied the 22,000 gallons onto approximately 1.74 acres.

The total municipal flow (we only process municipal flow) through the plant for the year 2018 was 13,068,000 gallons or 13.07 MGD. This was calculated from the DMRs for 2018. As was said above, 22,000 gallons of treated sludge were applied to the Wycaver property. The concentration of this material was at 1.7 % solids. This took four truck loads (each load being 5500 gallons). The total amount of Dry Solids applied to the property was: $0.022 \text{ MGD} \times 17,000 \text{ mg/L} \times 8.34 = 3,119 \text{ pounds}$ or 1.56 tons. As you know, we use alkaline stabilization both for Pathogen Reduction and Vector Attraction Reduction of our Class B Biosolids (addition of sufficient alkali to raise the pH of the biosolids to at least 12 at 25 C and maintain a pH of ≥ 12 for 2 hours and a pH of ≥ 11.5 for 22 more hours).

The total area of land the biosolids were applied to was 120' X 630'. This is equivalent to 75,600' or 1.74 acre (0.704 hectare).

If you have any questions about this matter, please contact me at 503-667-6735 or 503-777-2909.

Sincerely,

John Huntington
Treatment Plant Supervisor

Preparation

Plant consists of one extended aeration channel, one 41,000 gallon aerobic digester, a 12,000 gallon aerobic batch tank, a 55,000 gallon clarifier, a chlorine contact chamber and an ocean outfall. The annual influent volume is 13,068,000 gallons.

Influent enters the facility at the bar screen, flow through a primary settling chamber then into an aeration basin (41,000 capacity). The flow then moves from the aeration basin to the clarifier and is returned to the aeration basin. Solids are target wasted to the sludge digester. The decantate from the clarifier flows to the chlorine contact chamber for disinfection prior to discharge from the outfall to the Pacific Ocean.

Solids Treatment Processes

The EPA'S 40 CFR parts 503 and DEQ's Oregon Administrative Rules (OR) 340-50 allow permittees to use EPA approved alternatives to satisfy Class B biosolids pathogen or vector attraction reduction criteria. The H2O & s WWTP uses the following approved methods for treatment of its biosolids:

A. Pathogen Reduction-

Use of a process to significantly reduce pathogens (PSRP) 40 CFR 503.32(b)(3) Alt 2 #5. This involves sufficient use of an alkaline stabilization agent added to the sewage biosolids to raise the pH of the biosolids to 12 for ≥ 2 hours of contact (mixed).

B. Vector Attraction Reduction

As above, the plant uses addition of alkali to achieve vector reduction (40 CFR 503.33(b)(6)). This involves the addition of sufficient alkali to raise the pH of the biosolids to at least 12 S.U.s at 25C and maintain a pH of ≥ 12 for 2 hours and a pH of ≥ 11.5 for 22 more hours.

Nutrient and metals analysis are an average of representative sampling events taken over the year biosolids are land applied.

Nutrient and metal concentrations are determined from the current year's representative solids analysis.

Site loading rates for nutrients and metal must be adjusted based on current analysis to meet authorized site loading rates.

Sample calculation:

Order No.: 1806D46

Dear John Huntington:

Analytical Laboratory Group received 3 sample(s) on 6/27/2018 for the analyses presented in the following report.

The analysis was performed according to our laboratory's NELAP/TNI-approved quality assurance program. Any exceptions to this quality assurance program are noted on the case narrative.

Testing methods used are sufficiently sensitive enough to meet the requirements that support client/permittee NPDES permits that we have on file. The client is responsible for reviewing reports. The permittee is responsible for meeting permit limits.

Quality control data is within laboratory defined or method specified acceptance limits except if noted on the case narrative.

If you have any questions regarding these tests results, please feel free to call.
