

Oregon Requirements for Uniform Hazardous Waste Manifest

State of Oregon
Department of
Environmental
Quality

Background

Hazardous waste manifests provide the mechanism for “cradle-to-grave” tracking of hazardous waste. All hazardous waste shipments must be accompanied by the manifest unless they meet exceptions listed in the Code of Federal Regulations – 40 CFR 262.20(f). The U.S. Environmental Protection Agency Uniform Hazardous Waste Manifest (EPA Forms 8700-22 and 8700-22A) is used by hazardous waste generators, hazardous waste transporters and hazardous waste treatment, storage and disposal facilities in Oregon and the rest of the nation.

In addition to federal requirements found in the Appendix to 40 CFR Part 262, Oregon has additional manifest requirements, which are listed in this fact sheet. More information about the federal requirements can be found on EPA’s web page: www.epa.gov.

Must copies of manifests be submitted to the state of Oregon?

No. The Oregon Department of Environmental Quality does not require copies of Uniform Hazardous Waste Manifests. DEQ collects information from manifests on the annual hazardous waste report submitted by hazardous waste generators; hazardous waste treatment, storage and disposal facilities; and designated hazardous waste recycling facilities. Requirements to complete DEQ’s annual hazardous waste report replace EPA Biennial Report requirements. See Oregon Administrative Rule 340-102-0041 for Oregon reporting requirements.

Should I be concerned with the management codes?

Yes. Please note that Hazardous Waste Management Method Codes provided in Item 19 on the federal Uniform Hazardous Waste Manifest may not be the correct management code required on DEQ’s annual hazardous waste report. DEQ requires the management code that describes the final management method of the waste. Item 19 on the manifest is the management code for the first treatment of the waste. For more information about annual hazardous waste reporting, visit DEQ’s website at: www.oregon.gov/deq

What do I do if a manifest is not received back from the designated facility?

If you don’t receive your signed manifest back from the designated treatment, storage and disposal facility within 35 days of when the waste was shipped, you must contact the management facility designated on the manifest. Within 45 days from date of shipment, if you still have not received a signed returned manifest from the designated facility, you must file an exception report with DEQ. This report must include a legible copy of the manifest in question and a letter explaining efforts taken to locate the hazardous waste. Send the exception report to DEQ Hazardous Waste Program, Attn: Forms Clerk, 700 NE Multnomah St, Suite 600, Portland, OR 97232-4100. For more information on exception reporting, refer to the Code of Federal Regulations 40 CFR 262.42.

Are there state-specific hazardous waste codes in Oregon?

Yes. If your waste is neither a federally listed or characteristic hazardous waste, it may be a “State Only” hazardous waste. Waste codes that are considered hazardous waste only in Oregon, as identified in OAR 340-101-0033, are on page 2 of this document.

Where do I get additional information?

For additional questions about Oregon-specific requirements for the EPA Uniform Hazardous Waste Manifest, call 503-229-6968 in Portland or toll-free in Oregon at 1-800-452-4011, ext. 6968.

For questions about hazardous waste regulations or help in identifying areas that can be improved upon to reduce waste and disposal costs, contact the DEQ hazardous waste technical assistance staff in the regional office closest to you:

Bend	541-388-6146
Pendleton	541-276-4063
Portland	503-229-5263
Salem	503-378-8240

Alternative formats

Documents can be provided upon request in an alternate format for individuals with disabilities or in a language other than English for people with limited English skills. To request a document in another format or language, call DEQ in Portland at 503-229-5696, or toll-free in Oregon at 1-800-452-4011, ext. 5696; or email deqinfo@deq.state.or.us.

Oregon “State-Only” Waste Codes

State-Only Waste Code	State-Only Waste Type
1. ‘OR’ followed by the associated federal waste code. These are acute hazardous wastes, with codes beginning with the letter ‘P.’ For example: ORP003	A residue containing a 3 percent or greater concentration of any substance or mixture of substances contained in the federal rule 40 CFR 261.33 (e) (the "P" list) except pesticide wastes and those substances or mixtures of substances containing only those toxic contaminants listed in 40 CFR 261.24 in Table 1 (the TC list). If a residue contains only contaminants on the “P” list, and all those contaminants are ALSO on the TC list, the residue only needs evaluation using the TCLP method. The residue does not need additional evaluation as an Oregon “P” hazardous waste.
2. ‘OR’ followed by the associated federal waste code. These are toxic wastes, with codes beginning with the letter ‘U.’ For example: ORU001	A residue containing a 10 percent or greater concentration of any substance or mixture of substances contained in 40 CFR 261.33 (f),(the "U" list) except pesticide wastes and those substances or mixtures of substances containing those toxic contaminants listed in 40 CFR 261.24 in Table 1 (the TC list). If a residue contains only contaminants on the “U” list, and all those contaminants are ALSO on the TC list, the residue needs evaluation using the TCLP method. The residue does not need additional evaluation as an Oregon “U” hazardous waste. Note: U075 (Dichlorodifluoromethane) and U121 (Trichloromonofluoromethane), when they are intended to be recycled, are not considered to be Oregon “U” hazardous wastes.
3. ‘OR’ followed by the associated federal waste code. These are acute hazardous wastes or toxic wastes, with codes beginning with the letters ‘P’ or ‘U.’	Spill cleanup debris containing any amount of hazardous waste listed in 1 and 2 above.
4. X001	Waste pesticide residue, except for those managed as universal wastes or whose constituents are listed in 40 CFR 261.24 (a) but are below the prescribed regulatory levels.
5. X007	Wastes received from out of state that are not regulated in Oregon but are regulated as hazardous waste in state of origin.
6. F998	Residues from demilitarization, treatment and testing of blister agents (such as mustard agents), which have been added to and made a part of the list found in 40 CFR 261.31.
7. F999	Residues from demilitarization, treatment and testing of nerve agents, such as GB (Sarin) and VX; which have been added to and made a part of the list found in 40 CFR 261.31.
8. P998	Blister agents, such as mustard agents, which have been added to the list of commercial chemical products found in 40 CFR 261.33(e).
9. P999	Nerve agents, such as GB (Sarin) and VX, which have been added to the list of commercial chemical products found in 40 CFR 261.33(e).

The following wastes have been assigned codes but currently are **not** regulated as hazardous waste in Oregon. **Do not report these wastes on DEQ’s annual hazardous waste report if you generate them; do report these wastes if you receive them from off-site.**

- X002 Polychlorinated Biphenyls (PCBs)
- X004 Non-hazardous industrial waste
- X006 Lab Pack that is not considered hazardous waste under RCRA.
- X008 Household hazardous waste
