Fact Sheet

Estimating Vehicle Trips Per Day at Underground Injection Controls

Purpose
The purpose of this fact sheet is to provide Underground Injection Control owners with a quick way to calculate vehicle trips per day at properties that use stormwater UICs. Stormwater UICs, also known as stormwater drywells, are devices that infiltrate stormwater into the ground.

Background
In order to comply with the Oregon UIC regulations, UIC owners need information about the amount of vehicular traffic on the surface that the UIC drains. Specifically, the UIC owner has to know whether the average number of vehicle trips per day is greater than 1,000 trips per day or less than 1,000 trips per day because the pollutant load is larger for surfaces with more than 1,000 trips per day. UIC fees, sampling requirements, and Stormwater Management Plan requirements depend on vehicle trips per day.

Calculating vehicle trips per day
This fact sheet provides estimates of vehicle trips per day using methods in the 9th Edition of the Institute of Transportation Engineers (ITE) Trip Generation Manual. The estimates are based on easily-measurable characteristics of a facility, such as building size, number of employees, or number of students. Estimates of vehicular traffic for different types of facilities are provided in Table 1 through Table 5:

- Table 1: School District Facilities
- Table 2: Residential Facilities
- Table 3: Service Facilities
- Table 4: Office Buildings
- Table 5: Retail Facilities

If your facility is not listed on the tables in the following pages, then consult the Institute of Transportation Engineers Trip Generation Manual.

Figure 1: A catch basin (square feature) that collects stormwater from a parking lot and conveys the stormwater to a drywell (circular feature)

Limitations
The estimates of vehicle trips per day in this fact sheet are only one way of estimating vehicular traffic. UIC owners may use a different method in the ITE Trip Generation Manual, or may use direct measurement to determine vehicle trips per day. In addition, this fact sheet is only designed to estimate vehicle trips in order to meet UIC Program requirements; the fact sheet is not designed to estimate vehicle trips for engineering design purposes.

Alternative formats
Documents can be provided upon request in an alternate format for individuals with disabilities or in a language other than English for people with limited English skills. To request a document in another format or language, call DEQ in Portland at 503-229-5696, or toll-free in Oregon at 1-800-452-4011, ext. 5696; or email deqinfo@deq.state.or.us.
### TABLE 1—SCHOOL DISTRICT FACILITIES
