### **Beneficial Use of Solid Waste Determination Evaluation Form**

~~~	Applicant:		American Gypsum Recycling	, Inc.		
The second secon	BUD#:	ВІ	BUD-20180205			
	Solid Waste:		Waste new construction wa	llboard a	nd waste demolition wallboard.	
DEQ	Summary of Proposed Beneficial Use:					
State of Oregon	Soil amendment, concrete feedstock, wallboard feedstock, animal bedding and compost feedstock.					
Department of Environmental	Reviewer:		Esch, David	Date:	2/7/2018	
Quality	Tier:		One 🛛 Two 🗌 Three			

#### **Beneficial Use of Solid Waste**

Beneficial use of solid waste is a sustainability practice that may involve using an industrial waste in a manufacturing process to make another product or using a waste as a substitute for construction materials.

The environmental benefits of substituting industrial waste materials for virgin materials includes conserving energy, reducing the need to extract natural resources and reducing demand for disposal facilities.

Oregon Administrative Rules 340-093-0280 - 0290 establish standing beneficial uses and a process for DEQ review of case-specific beneficial use proposals. Under these rules, DEQ may issue a beneficial use determination as an alternative to a disposal permit for proposals that meet the rule criteria. If approved, once a beneficial use determination is issued, DEQ no longer regulates the waste as a solid waste as long as the waste is used in accordance with the approved beneficial use determination.

#### **Beneficial Use Determination Evaluation Summary**

$\boxtimes$	Yes, the Beneficial Use of this solid waste meets all the case-specific performance criteria listed below and is approved.
	No, the Beneficial Use of this solid waste does not meet all the case-specific performance criteria listed below and is not approved.

**Summary:** AGR, Inc. provided suitable characterization of the waste material to include pertinent analytical data. Used in accordance with the BUD approval conditions, and currently acceptable agricultural and manufacturing techniques associated with the use of materials this beneficial use will replace, the environment as well as human health and safety will be adequately safeguarded. AGR, Inc. will provide appropriate use/management information to those receiving/using the material and will track the uses/location/amounts of the material that is beneficially used. Having several viable options for beneficial use, AGR, Inc. and downstream users will likely not speculatively accumulate the material.

## **Beneficial Use of Solid Waste Determination Evaluation** Form

Applicant:	American Gypsum Recycling, Inc.
BUD #:	BUD-20180205
Solid Waste:	New construction waste wallboard and demolition waste wallboard.
Date:	2/7/2018

## Case-Specific Beneficial Use Performance Criteria:

DEQ may approve an application for a case-specific beneficial use of solid waste only if all the following performance criteria are addressed: 1) Characterization of the Solid Waste; 2) Productive Beneficial Use of the Solid Waste; and, 3) The effect of the Proposed Beneficial Use on Public Health, Safety, Welfare and/or the Ε

### 1

Environment.
1) Characterization of the Solid Waste
Did the applicant characterize the solid waste and proposed beneficial use sufficiently to demonstrate compliance with the rules for case-specific beneficial use determinations (OAR 340-093-0280) by submitting required information for the appropriate tier? (See tier sections below for detailed characterization information.)
∑ Yes □ No
Was the following information submitted for DEQ review and how adequate was it?
Tier 1 ⊠ Applicable □ Not applicable
Did the applicant provide an adequate description of the material proposed for beneficial use, the manner of generation and the estimated quantity to be used beneficially each year?
The material consists of two separate waste streams: "clean" new construction waste wallboard (unpainted, un-textured, uncontaminated), and "used" reclaimed demolition wallboard (textured and/or painted and potentially containing fasteners, caulks and other standard construction materials). AGR, Inc. estimates maximum of 2000 total tons unprocessed material, 30 cubic yards of paper wallboard backing, and 2000 tons reclaimed gypsum powder to be on-site at any given time. AGR, Inc. estimates annual thru-put at 30,000 tons.
Did the applicant provide an adequate description of the proposed beneficial use and justify how the proposed use is beneficial?
Applicant proposes the following uses for reclaimed "clean" material: soil amendment in agricultural environments, and gypsum feedstock for concrete and wallboard manufacturing. Reclaimed paper backing will be used as animal bedding and/or compost feedstock.
Applicant proposes the following uses for reclaimed "used" material: gypsum feedstock for concrete and wallboard manufacturing. Reclaimed paper backing from "used" material will be properly disposed (landfilled).
Did the applicant provide a sufficient comparison of the chemical and physical characteristics of the material proposed for beneficial use with the material it will replace?       ✓ Yes ☐ No
Suitable demonstrations were made showing that reclaimed gypsum from wallboard is equivalent to feedstocks used in manufacturing wallboard and concrete, and that reclaimed gypsum is equivalent to gypsum produced from raw natural materials.

## Beneficial Use of Solid Waste Determination Evaluation Form

Applicant:	American Gypsum Recycling, Inc.
BUD #:	BUD-20180205
Solid Waste:	New construction waste wallboard and demolition waste wallboard.
Date:	2/7/2018

<ul> <li>Did the applicant successfully demonstrate compliance of the proposed beneficial use with the performance criteria in OAR 340-093-0280 based on knowledge of the process that generated the material, properties of the finished product, or testing?</li></ul>
Analytical lab data for reclaimed material was provided for comparison.
If required, did the applicant provide any other DEQ required information to evaluate the proposal?
No other information was required.
Tier 2 Applicable Not applicable
Did the applicant submit all the information required for a Tier 1 application?
Did the applicant submit adequate sampling and analysis to make a determination of suitability for beneficial use? (Note: The analysis must provide chemical, physical, and biological characterization of the material proposed for beneficial use and identify potential contaminants in the material or the end product, as applicable.)
There are no biological characteristics to evaluate. Suitable demonstrations were made showing that reclaimed gypsum from wallboard is equivalent to feedstocks used in manufacturing wallboard and concrete, and that reclaimed gypsum is equivalent to gypsum produced from raw natural materials. SDS's and lab results were provided for comparison.
• When applicable, did the applicant provide a risk screening comparing the concentration of hazardous substances in the material to existing, DEQ approved, risk-based screening level values, and demonstrate compliance with acceptable risk levels? ☐ Yes ☐ No
Concentrations of hazardous substances were below or similar to those of conventional raw materials.
When applicable, did the applicant supply the location or type of land use where the material will be applied, consistent with the risk scenarios used to evaluate risk?      ✓ Yes ✓ No
Not applicable. The proposed uses are not site-specific.
• When applicable, did the applicant supply contact information of property owner(s) if this is a site-specific land application proposal, including name, address, phone number, e-mail, site address and site coordinates (latitude and longitude)? ☐ Yes ☐ No
Not applicable. The proposed use is not site-specific.
Did the applicant supply an adequate description of how the material will be managed to minimize potential adverse impacts to public health, safety, welfare, or the environment?       ∀es □ No
Adoption of industry standard practices applicable to conventional raw materials and their use will minimize potential adverse impacts. DEQ, through the "Conditions of Use" noted in the BUD, have further bolstered those safeguards.
