Clean Fuels Program
Fourth Quarter 2018 Data

Contact: OregonCleanFuels@deq.state.or.us
 700 NE Multnomah St., Portland, OR 97232

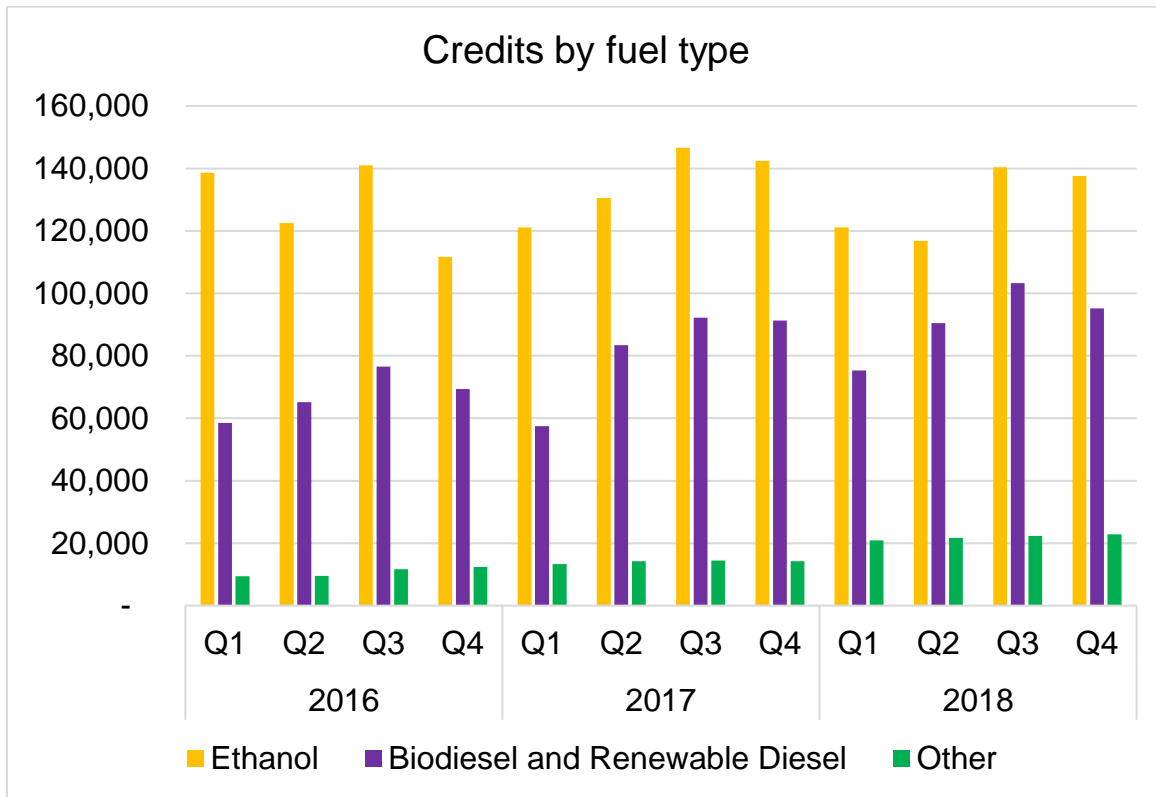

DEQ staff are pleased to issue this quarterly data summary for the Clean Fuels Program. The aggregated quarterly data for the program is also posted on our website in an Excel spreadsheet.

The first graph shows the number of credits and deficits generated. Credits are generated by fuels that have a carbon intensity which falls below this year’s target, while deficits are generated by fuels whose carbon intensity is higher than this year’s target.

*Note: DEQ [calculates the number of residential EV credits](#) on an annual basis and distributes them amongst the electric utilities who have opted into the program and the Backstop Aggregator. The credits are issued in the first quarter of the following year and retroactively divided between the 4 quarters. The 2018 residential EV credits are not yet included in the 2018 quarterly data.

The second graph shows the breakdown of which fuels generated credits. The majority of credits have come from Ethanol, Biodiesel, and Renewable Diesel which are blended into gasoline and diesel, respectively. The Other category includes alternative fuels such as Natural Gas, Electricity, Biogas and Propane.
