Information Required for Individual Wastewater NPDES Permit Readiness Review

Checklist to be completed by permit readiness team

Water Quality Permitting

Use this checklist to determine Individual NPDES permit readiness. Complete one readiness review for each individual permit

*Key documents required to complete this review - application, correspondence and permit

<p>Readiness summary (to be completed by reviewer after checklist is completed): The interfor facility is an industrial minor facility with two outfalls: Outfall 001 and 003. Outfall 003 is not active, but retained in the permit. ELGs are applied to this permit. The current fact sheet states that a smaller mixing zone is required and the mixing zone information should be reviewed. Whole Effluent Toxicity testing requirements need to be added to the permit because of the amount of toxic pollutants in the discharge. There are effluent data for temperature, but DO is not a monitoring requirement... data is needed for DO since it is on the 303(d) list. Excel spreadsheet of data needs to be obtained from the permittee. The facility will have to possibly get treatment for copper and other toxic pollutants. Facility will need to collect Copper BLM parameters.</p>							
Readiness Score ((# of "action required" + Sum of estimated time rankings) * Complexity)						144
