Information Required for Individual Wastewater NPDES Permit Readiness Review

Checklist to be completed by permit readiness team

Water Quality Permitting

Use this checklist to determine Individual NPDES permit readiness. Complete one readiness review for each individual permit

*Key documents required to complete this review - application, correspondence and permit

Readiness summary (to be completed by reviewer after checklist is completed): This permit has been delayed because of temperature litigation. The facility discharges non-contact cooling water and sump wastewater from five different outfalls. The temperature limits set for this permit were developed to protect the lahontan cutthroat trout. There is no treatment for any of the pollutants except for oil and grease. The application package is missing the site map. The MZ study needs to be reviewed and updated if necessary. The high multiplier on this permit relates to the litigation and the external interactions that may be needed to complete the permit renewal.							
Readiness Score ((# of "action required" + Sum of estimated time rankings) * Complexity)						172
