Information Required for Individual Wastewater NPDES Permit Readiness Review

Checklist to be completed by permit readiness team

Water Quality Permitting

Use this checklist to determine Individual NPDES permit readiness. Complete one readiness review for each individual permit

*Key documents required to complete this review - application, correspondence and permit

Readiness summary (to be completed by reviewer after checklist is completed): The Eagle Creek NFH discharges from 12 outfalls. The long-term average for these outfalls ranges between 0 and 7.92 MGD; The facility is treated as a CAFO, and used Form 2B to apply for renewal; There is no mixing zone for this permit, and one may be needed given the high flows from some of the outfalls. Given the chemicals identified as being in use, and possibly in the Effluent, WET testing may be necessary. The facility has several enforcement issues in the past for temperature violations (see WQ/I-NWR-14490).							
Readiness Score ((# of "action required" + Sum of estimated time rankings) * Complexity)						102
