Information Required for Individual Wastewater NPDES Permit Readiness Review

Checklist to be completed by permit readiness team

Water Quality Permitting

Use this checklist to determine Individual NPDES permit readiness. Complete one readiness review for each individual permit

*Key documents required to complete this review - application, correspondence and permit

Indicate permit status and/or reasons for delay	administratively extended	Category for delay	Resource limitations		Reason for delay	Technical staff unavailable	
<p>Readiness summary (to be completed by reviewer after checklist is completed): The Sandy WWTP application has the Maximum Daily TDS value at 2.50 mg/L. This is the same value reported for the average TDS and the MRL for the method. There are several errors in the application that need to be rectified. I'm sure there is a MZ study. There's no evidence of it in the file. Same with the recycled water use plan. Need to verify if the facility has a WLA from the Willamette TMDL. This facility is a minor on the NWR drive, however, it's treated like a major in the permit with WET requirements, and the full toxics screen. recent compliance issues may increase the complexity of the permit;</p>							
<p>Readiness Score ((# of "action required" + Sum of estimated time rankings) * Complexity)</p>						84
