# Information Required for Individual Wastewater NPDES Permit Readiness Review

## Checklist to be completed by permit readiness team

### Water Quality Permitting

Use this checklist to determine Individual NPDES permit readiness. Complete one readiness review for each individual permit

\*Key documents required to complete this review - application, correspondence and permit

Indicate permit status and/or reasons for delay		administratively extended	Category for delay	Resource limitations		Reason for delay	Technical staff unavailable
<p><b>Readiness summary (to be completed by reviewer after checklist is completed):</b> Lumber drying operation, with constant boiler blow down of high pH wastewater that is neutralized on site, wastewater also includes vehicle wash and log sprinkling water. application indicates that the facility will be installing a recirculation system that will eliminate discharges during the dry season, schematic in the application indicates that the system is not fully operational; mixing zone study should be reviewed and/or updated, mixing zone study was not available for review; a cogeneration system was also installed which discharges high temp wastewater, this type of discharge with minimal treatment may create complexities for the permit writer; correspondence between permit writer and permittee should be reviewed in regards to recommendations in application; application extension was requested and approved;</p>							
<p><b>Readiness Score ((# of "action required" + Sum of estimated time rankings) * Complexity)</b></p>						<p><b>132</b></p>
