How to Use This Document

This document is intended to be used by responders in the field or who otherwise do not have access to the [online interactive map version of the South Oregon Coast GRP](#). Especially for notification areas, the fastest and most reliable way to identify which notifications to make for an incident is to:

1. Pan and zoom to the affected area in the map.
2. Use the **Select** tool to draw a shape on the map to indicate the area that is impacted or could be impacted (the area within which you want to notify facilities and organizations).

3. Open the data tables by clicking the up arrow at the bottom of the map.

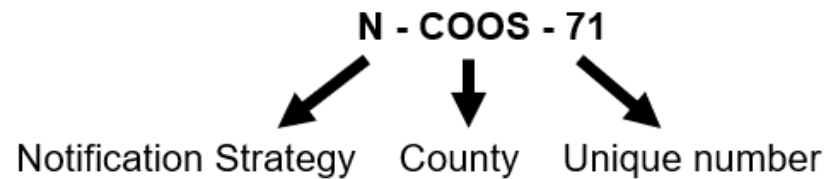

4. Click the tabs for the Notification Strategy Points and Notification Strategy Areas. When you have features selected on the map, by default these tables will show details on only the selected strategies.

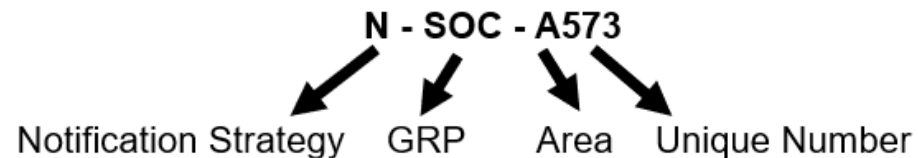

Naming Convention for Notification Strategies

For notification strategies, the number is just a unique number. A higher or lower number in the short name of a notification strategy does not mean anything about the strategy; these numbers were simply assigned in the order they were developed.

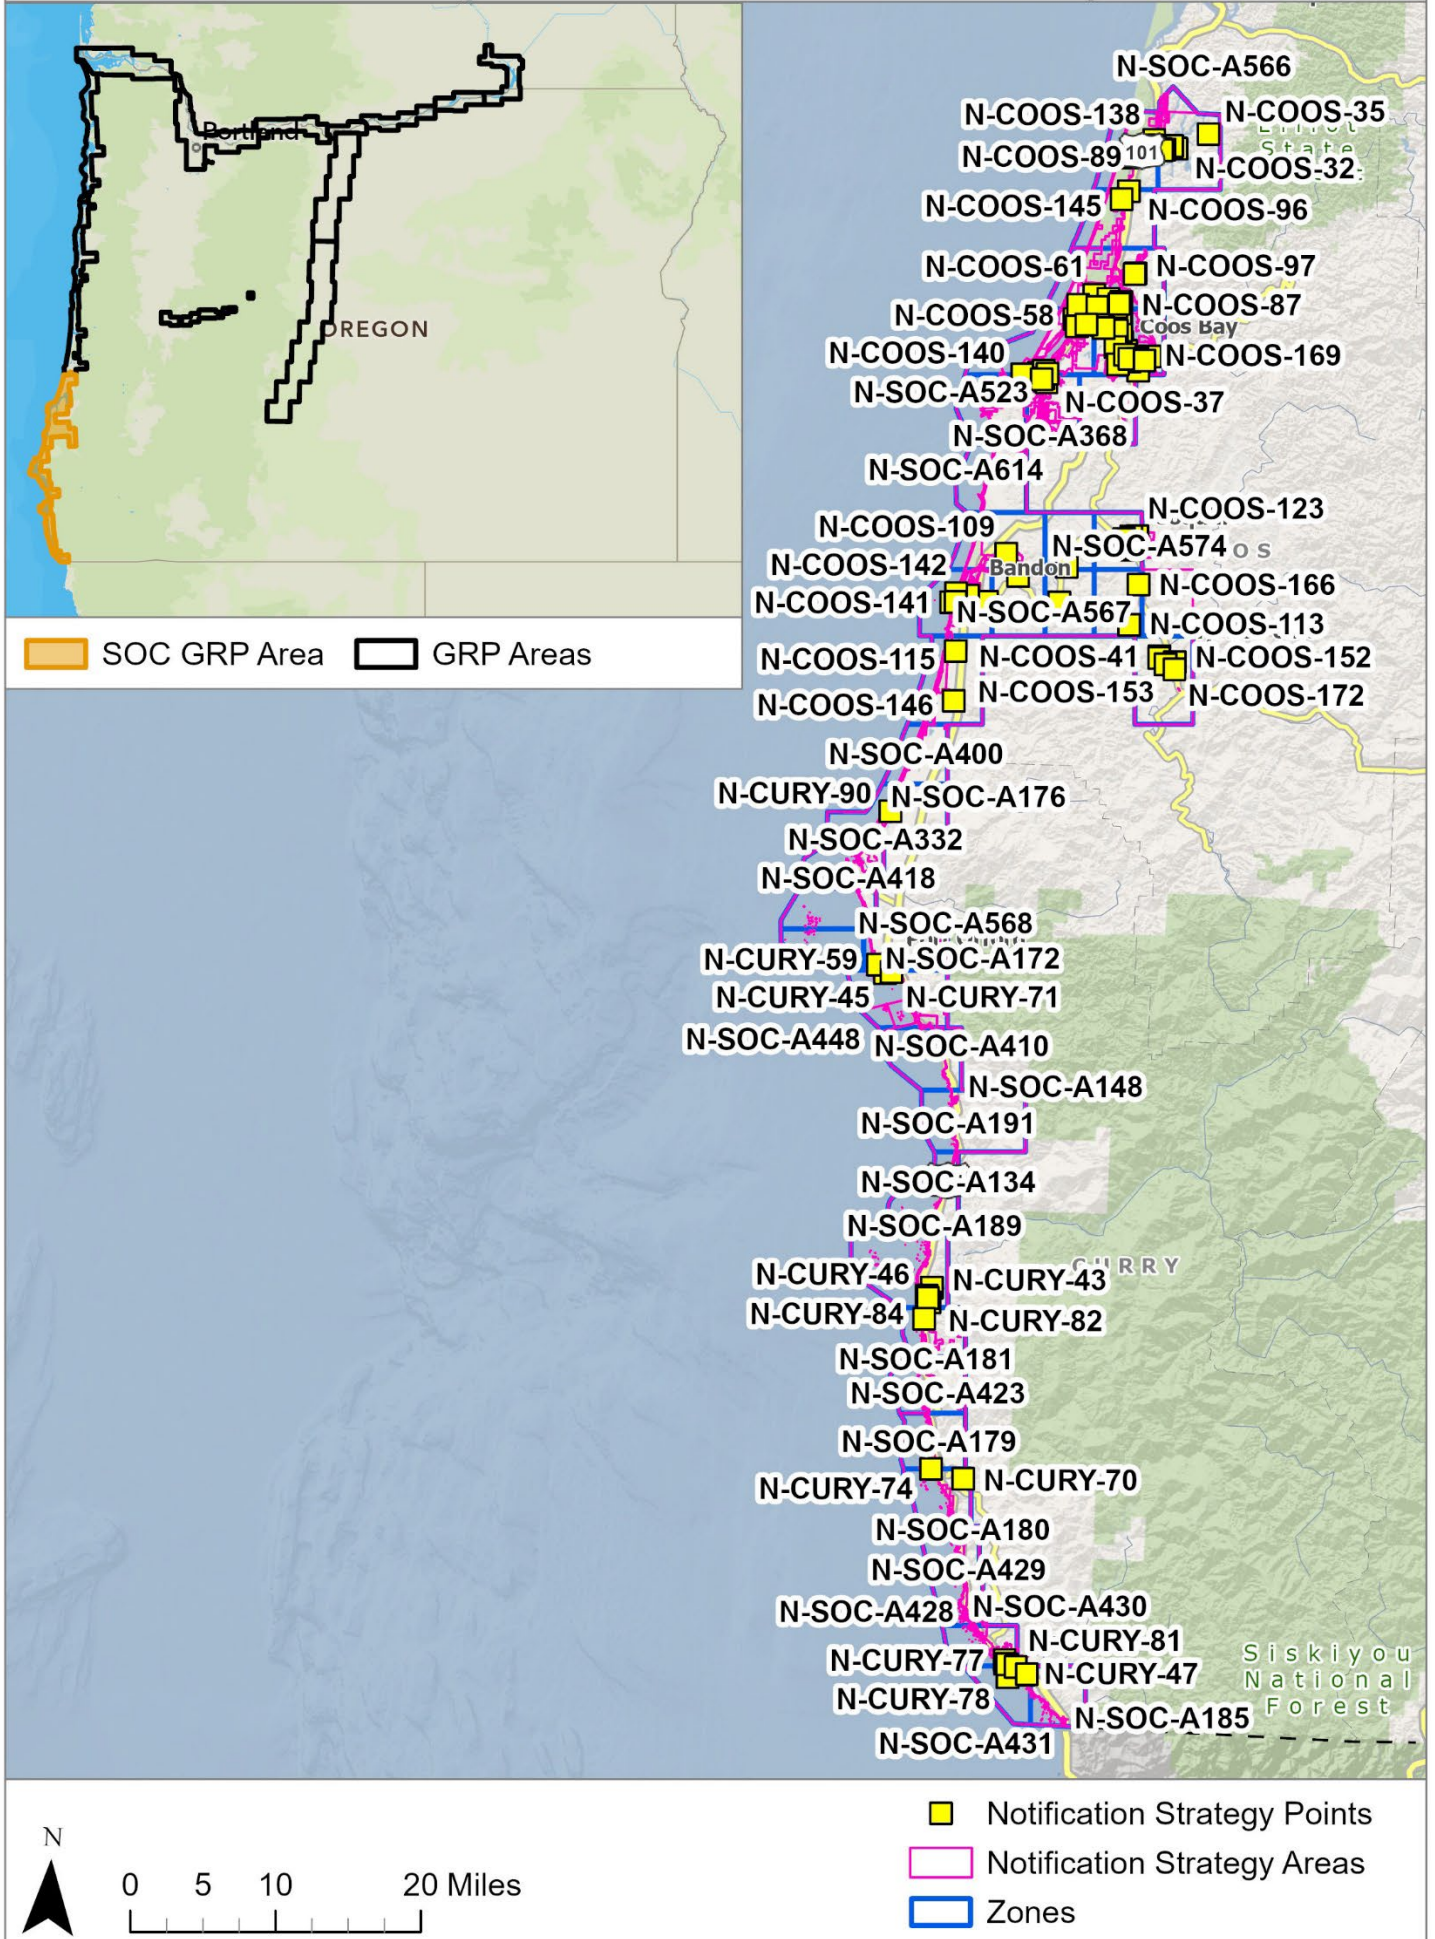

Example 1: Notification Point Short Name

Example 2: Notification Area Short Name
