Re: Best Work Practices Agreement: High Solids Clear Coat

Dear Dave:

Daimler Trucks North America ("DTNA") received our renewed Title V permit dated May 17, 2021. The permit incorporates conditions from our Best Work Practices Agreement ("BWPA"). Condition 27.c required that we submit a plan last fall to study the feasibility of converting to high solids clear coat and provides a schedule for implementation if the technology is deemed feasible. This letter is to inform you that DTNA has successfully converted to the use of high solids clear coat so there is no need to further assess our plan. The measure has been fully implemented through the use of high solids clear coat provided to us by our new coatings vendor, Axalta.

Please contact me at (503) 745-2533 or at christopher.blake@daimler.com if you have any questions.

Sincerely,

Chris Blake
Environmental Engineer
Daimler Trucks North America
