

# Request for Exposure Location Variance from Underlying Zoning

---

Facility Name: \_\_\_\_\_

Permit Number: \_\_\_\_\_

**Instructions:**

A facility may request to model an exposure location in a manner that differs from underlying zoning for that exposure location based on the current land use [\[OAR 340-245-0210\(1\)\(a\)\(F\)\]](#). In order to approve an exposure location variance from underlying zoning, please submit this form with the following documents when you submit your Cleaner Air Oregon Modeling Protocol:

1. An aerial photo showing where you assert that modeled exposure locations differ from underlying zoning (for more information, please see our [FAQ webpage](#)).
2. Complete the AQ522 table (Excel format), listing all exposure locations, their corresponding land use zoning designations, and an explanation of each location for which you are requesting an exposure location variance, with justification for DEQ review.

If DEQ approves the exposure location variance and a risk assessment is completed, DEQ will issue a permit with annual reporting requirements. Annual verification that the current land use has not changed, and the variance should continue, will be determined using form AQ540, submitted as part of the annual report.

**Statement of Certification:**

By signing this document, I hereby certify that based on information and belief formed after reasonable inquiry, the statements and information in this document are true, accurate, and complete.
