RE: Clean Fuels Credits Revenue Spending Report

Per OAR 340-253-0640, the Oregon Department of Environmental Quality (DEQ) implemented an annual reporting requirement for utilities that obtain revenue from the sale of clean fuel credits. As a result, all electric utilities that receive base or incremental clean fuels credits must, on an annual basis, report the following:

- The total revenue from the sale of base and incremental Credits.
- The percentage of the Clean Fuels Program (CFP) related administrative costs.
- A description of the programs that CFP funded revenue from the sale of base credits.
- A description of the programs that CFP funded revenue from the sale of total credits.

In summary, for 2022, Forest Grove Light & Power sold 1,617 CFC for \$120 per credit, which generated a total revenue of \$194,010.00.

Forest Grove Light Power paid all administration costs regarding the Clean Fuel program.

Programs that are supported by clean fuels funding include:

An incentive of \$500 to purchase an electric vehicle level 2 charger. The incentive applies to all prior and future purchasers of Level 2 chargers. In 2022 forty-nine customers used the incentive to install chargers in their homes. As a result, Forest Grove Light & Power issued \$24,500 to our customers.

In conclusion, Forest Grove Light & Power will continue to add programs and help with strategies for addressing global climate change.

We thank your team for your continued support and willingness to help us make these programs a reality.

Sincerely,

Eddie Littlefield
