

Oregon Department of Environmental Quality

Residential Electricity Credits for the First Half of 2023

Date published: Nov. 1, 2023

Contact: OregonCleanFuels@deq.oregon.gov

Background

The Oregon Department of Environmental Quality, the Oregon Department of Energy, and the Oregon Public Utility Commission periodically receive vehicle registration data from the Oregon Department of Transportation's Division of Motor Vehicles. This data set is the official data used to track progress toward EV adoption goals and is what the Clean Fuels Program uses to calculate residential electricity credits. It is also the data that ODOE uses to populate its EV Dashboard.

Since the last credit issuance

There are no changes in the methodology used to calculate the CFP residential electricity credits. DEQ continues to use the method outlined in the following [document for determining the number of electric vehicles used to calculate the residential EV credits](#).

Results

Table 1 below shows the detailed breakdown of the number of EVs used to calculate the CFP residential electricity credits for January through June 2023. Electric vehicles include light trucks, cars, motorcycles, and mopeds that are registered through DMV.

CFP staff allocate the EVs, based on the address associated with each registered Vehicle Identification Number, to:

- 1) specific electric utilities who have opted in to participate in the program; and
- 2) the Backstop Aggregator if:
 - a. there is no address,
 - b. the address is located in an electric utility who has not opted into the program, or
 - c. there is no specified utility for the address.

Contact
