Proposed Intended Use Plan 2027 Second Edition update summary

This Intended Use Plan 2027 Second Edition includes updated information from the Intended Use Plan 2027 Initial Edition summarized below. The majority of the content is the same as the IUP 2027 Initial Edition. This Proposed IUP 2027 Second Edition updates include:

Principal forgiveness section (page 9) – updated statement: “Federal Infrastructure Investment and Jobs Act funds expire federal fiscal year 2026, which will reduce the amount of principal forgiveness available for borrowers. The program has updated principal forgiveness eligibility criteria and limits for all new and amended loans starting Oct. 1, 2026, documented in Appendix 6 – Principal forgiveness eligibility criteria and limits page 73.”

Affordability criteria section (page 9) - The Oregon CWSRF program has updated affordability criteria to use the Oregon Distressed Areas Index [Business Oregon : Distressed Areas in Oregon : Reports, Publications, and Plans : State of Oregon](#). This index identifies economically distressed cities and counties in Oregon and meets requirements under the Clean Water Act and Oregon Administrative Rules for affordability criteria including: income, unemployment, population trends, and other information deemed relevant by the State. The program is prioritizing principal forgiveness for federally recognized Tribes, very small communities with a population up to 2,500, and small communities with a population 2,501 – 10,000 that meet affordability criteria and implement domestic wastewater projects.

Applications section (page 11) updated statement: “This Proposed Intended Use Plan 2027 Second Edition includes 10 new loan applications requesting \$17,901,561 from the April 2025 round of applications. This Proposed IUP 2027 Second Edition includes a total of 80 loan applications on the Project Priority List including 57 non-planning (design/construction) loan applications requesting \$436,406,162 and 23 planning loan applications requesting \$7,305,100—for a total of \$443,711,262 requested from the fund.”

Table 1: Intended Use Plan New Loan Applicants updated on page 11.

Table 2: New and Amended Loans SFY 2026 (July 1, 2025 – June 30, 2026) on page 13.

Project Descriptions (page 19) updated with new applications organized by planning loan applicants, design and construction loan applications, and applications with loans signed for design to be amended (increased) for construction.

- **Planning Loan Applications** page 19.
- **Design and Construction Loan Applications** page 25.
- **Design loans pending construction** page 38.

Public Notice updated for Proposed Intended Use Plan 2027 Second Edition page 56.

Appendix 1A – Project Priority List for Non-planning Applications updated with new applicants, adjusted for applicants with full loan commitments and applications removed from the IUP 2027 Initial Edition page 57.

Appendix 1B – Project Priority List for Planning Applications updated with new applications, adjusted for applications with full loan commitments and applicants removed from the IUP 2027 Initial Edition page 62.

Appendix 3 – Estimated Funds Available – update with actuals through 6/30/2026 page 69.

Appendix 4 – Binding Commitments and Funds Available – updated with actuals through 6/30/2025 page 70.

Appendix 6 – Principal forgiveness eligibility criteria and limits – the Oregon CWSRF program has updated principal forgiveness eligibility criteria and limits in Appendix 6 page 73.

Introduction

The Clean Water State Revolving Fund program rules and regulations are referenced here:

- Title VI of the Clean Water Act ([33 U.S. Code §1383](#)) and CWSRF Regulations ([40 CFR Part 35.3100](#))
- Oregon Revised Statute [468.020 and ORS 468.423 – 468.440](#)
- [Oregon Administrative Rules Chapter 340, Division 54](#)

The Oregon Department of Environmental Quality prepares the Intended Use Plan as required by the U.S. Environmental Protection Agency and Oregon Administrative Rules to inform Oregonians and Clean Water State Revolving Fund loan applicants about how DEQ proposes to use the fund during state fiscal year 2027 (July 1, 2026, through June 30, 2027).

DEQ's Clean Water State Revolving Fund program offers below-market rate loans and bond purchases to public agencies for planning, design, construction and implementation of the following water quality improvement projects:

- Wastewater collection, treatment, water reuse and disposal systems
- Nonpoint source water pollution control projects
- Development and implementation of management plans for federally designated estuaries in Oregon (Tillamook Bay and Lower Columbia River)

DEQ accepts applications at any time but sets application deadlines for application review and scoring periods two times per year in April and October in 2026. Loan applicants should become familiar with the CWSRF [application process and loan requirements](#) prior to applying.

Once scored and ranked, DEQ incorporates eligible applications into this plan, submits the plan to EPA for review and issues a public notice about the plan. DEQ notifies the public by announcing the public comment period in the Daily Journal of Commerce. After the public comment period, DEQ updates this plan and publishes it on the [program's IUP web page](#). Applicants can begin completing loan requirements after the public comment period.

EPA requires that each state's Clean Water State Revolving Fund program develop a project priority list, which is a primary component of the Intended Use Plan. DEQ includes applications for eligible projects on the project priority list in ranked order for financing, based on project score in Appendices 1A and 1B. However, DEQ does not commit or reserve funds for individual projects until an applicant meets all loan requirements. DEQ determines that the applicant is "ready to proceed" to loan agreement execution once all application requirements are satisfied.

In the event the program does not have sufficient funds available to finance all projects that are ready to proceed, DEQ will award funding to projects that are ready to proceed in priority order based on project score. Loan increases to existing loans receive priority over new applications.

This Intended Use Plan includes loan program requirements, definitions, and application process information. The plan also details the program's administration, budget, and fiscal condition.

This Intended Use Plan 2027 Initial Edition will be used to apply for three additional cap grants allocated for the Oregon CWSRF by EPA for Federal Fiscal Year 2026 and Oregon State Fiscal Year 2027:

- Annual base capitalization grant allocated for federal fiscal year 2026 in the amount of \$8,068,000.
- Infrastructure Investment and Jobs Act supplemental capitalization grant allocated for federal fiscal year 2026 in the amount of \$27,829,000.
- Infrastructure Investment and Jobs Act emerging contaminants capitalization grant allocated for federal fiscal year 2026 in the amount of \$2,402,000.

Program goals

Mission statement:

Oregon's Clean Water State Revolving Fund program supports communities by financing projects that improve water quality and environmental outcomes. The program is dedicated to working with small communities and on water quality projects that increase financial and environmental sustainability, resiliency, and water and energy efficiency.

1. **Goal:** Assist communities in restoring, maintaining, and enhancing water quality by offering financial assistance for water pollution control, water quality improvement and protection projects. (PROJECTS)

Objectives

- Continue priority focus on providing loans to publicly owned treatment facilities.
- Develop tools to assist communities in obtaining loans.
- Promote the local community loan to support emerging markets.
- Encourage innovative and non-traditional projects, such as green infrastructure, water and/or energy efficiency, resilience, and environmentally and financially sustainable projects.
- Encourage communities to focus on high priority, water quality improvements projects statewide, including stormwater, nonpoint source pollution controls and estuary management projects.

2. **Goal:** Administer the Clean Water State Revolving Fund to ensure programmatic compliance with regulatory requirements, financial integrity, fund viability and perpetuity. (PROGRAM)

Objectives

- Maintain the revolving nature of the fund and an active pace of disbursements in conjunction with the receipt of new funds and loan repayments.
- Ensure program budget adequately supports resources, administrative costs and anticipates future needs.
- Provide financial assistance most advantageous to borrowers, to the maximum extent possible, and maintain sound financial management of the fund.
- Ensure the program aligns with existing, developing and emerging markets, incorporating treatment and non-treatment solutions for all sources of water pollution.
- Ensure the program management complies with current state and federal regulations.
- Strategically market and communicate the Clean Water State Revolving Fund project and borrower eligibility and benefits to decision makers at eligible public agencies.

- Build on previous successes and increase those market shares.
3. **Goal:** Assist communities with the loan application and loan management process to meet regulatory requirements with federal and state requirements, water quality standards, utility, and financial management. (TECHNICAL ASSISTANCE)

Objectives

- Provide technical assistance to small communities using principles of effective utility management to assess planning, financial, operational, managerial, and infrastructure capability needs that will result in water quality improvements.
 - Provide training and technical assistance to communities in conjunction with program requirements of the Water Resources Reform and Development Act of 2014.
4. **Goal:** Coordinate and collaborate with other state and federal programs to provide financial solutions for water quality improvements to Oregon public agencies. (COORDINATION)

Objectives

- Develop a strategy with other funding agencies to communicate, coordinate and jointly fund projects with high priority water quality needs in the state.
- Identify opportunities and financial solutions to address point source and nonpoint source water quality impairments.

The program's Annual Report 2025 demonstrates actions taken to achieve the program's goals.

Infrastructure Investment and Jobs Act priorities

The Infrastructure Investment and Jobs Act, Nov. 15, 2021, includes supplemental federal funding for Clean Water State Revolving Fund programs with requirements and priorities. This Intended Use Plan addresses IIJA requirements and priorities in accordance with the Clean Water Act and EPA.

Principal forgiveness

IIJA requires states to provide 49% of the IIJA supplemental capitalization grant amount as additional subsidization in the form of principal forgiveness or grants. Oregon CWSRF will provide 49 percent of the IIJA supplemental capitalization grant as principal forgiveness. In 2023, the program increased limits of the amount of principal forgiveness on a per loan basis to provide more principal forgiveness for the program to meet this requirement.

Federal Infrastructure Investment and Jobs Act funds expire federal fiscal year 2026, which will reduce the amount of principal forgiveness available for borrowers. The program has updated principal forgiveness eligibility criteria and limits for all new and amended loans starting October 1, 2026, documented in Appendix 6 – Principal forgiveness eligibility criteria and limits page 73.

Affordability criteria

The Oregon CWSRF program has updated affordability criteria to use the Oregon Distressed Areas Index [Business Oregon : Distressed Areas in Oregon : Reports, Publications, and Plans : State of Oregon](#). This index identifies economically distressed cities and counties in Oregon and meets requirements under the Clean Water Act and Oregon Administrative Rules for affordability criteria including: income, unemployment, population trends, and other information deemed relevant by the State. The program is prioritizing principal forgiveness for federally recognized Tribes, very small communities population up to 2,500, and small communities

population 2,501 – 10,000 that meet affordability criteria and implement domestic wastewater projects.

Technical assistance

Oregon CWSRF has developed technical assistance services internally for the program focused on loan readiness. The primary goal of CWSRF Technical Assistance for Loan Readiness is to provide communities on the IUP with assistance to help them move through the application process more efficiently, effectively, become better prepared to sign their CWSRF loan and meet EPA's timely and expeditious requirements. The program has dedicated staff to identify cohorts of applicants to provide technical assistance focused on meeting program requirements and moving forward to loan commitment in a timely and expeditious manner. Technical assistance is customized to meet specific needs of applicants to help understand requirements and move through the process from application to loan commitment, which may include:

- Troubleshooting areas of concern that may include financial management, environmental review crosscut requirements, and other administrative challenges
- Working with external consultants/technical assistance providers, which may include EPA technical assistance, to share with cohort members as appropriate
- Ongoing meetings with communities to identify needs, provide direct assistance and identify action items that will resolve issues in a timely manner
- Provide specific services to each cohort based on their needs so communities can go through similar trainings, webinars, coaching and find solutions to current challenges while also working with others to share lessons learned and other strategies

Oregon DEQ CWSRF will not use federal capitalization grant funds for technical assistance. DEQ continues to assess needs and resources for technical assistance and coordinates with EPA region 10 staff regarding technical assistance by EPA and Oregon CWSRF in Oregon.

Program administration

Administrative expenses

DEQ charges an annual fee in the amount of 0.5 percent of the unpaid balance, beginning with the second repayment, as prescribed in Oregon Administrative Rule [340-054-0065\(6\)](#) to pay program administrative expenses. DEQ will continue to monitor the fee revenue account to ensure the revenue source is adequate. The fee revenue account is separate from the loan fund. As of February 28, 2026, the program has approximately \$2.44 million in the administrative fund. For state fiscal year 2027, DEQ will not utilize the annual capitalization grant award toward program administrative expenses. DEQ will use loan repayment and administrative funds up to four percent of federal capitalization grant amounts as allowed to cover administrative expenses.

Financing options

Oregon's CWSRF program offers two financing options:

- Loans with terms not-to-exceed the lesser of 30 years or the useful life of the asset.
- Bond purchase agreements not-to-exceed the lesser of 30 years or the useful life of the asset.

Terms and conditions

Loans and bond purchases

The Clean Water State Revolving Fund offers loans and bond purchases agreements with a maximum up to 30-year repayment terms. The repayment term begins after project completion. Interest rates are based on the average 20-year municipal bond rate, as published by the Federal Reserve. Thirty-year terms are subject to an interest rate premium based on community demographics. Shorter terms may have different interest rates. The average bond rate is calculated on a quarterly basis. A percentage of that rate is used for the loan interest rate on loans signed in the subsequent calendar quarter. These percentages are stated in Oregon Administrative Rule [340-054-0065\(4\)](#).

DEQ updates interest rates quarterly. Current interest rates are based on the average municipal bond rates during the April 1 to June 30, 2026, period. New rates for the next quarter will be calculated and published on the [Clean Water State Revolving Fund website](#) on July 1, 2026.

Applications and program funding solicitation

DEQ conducts Annual Solicitation throughout the year. Program staff continues to conduct outreach with program information through Loan Information Request Form meetings, coordination with funding partners, One Stop meetings, conference and training events including League of Oregon Cities, Oregon Infrastructure Summit, Oregon Association of Clean Water Agencies, Oregon Infrastructure Workshops, and responding to inquiries, which are increasing as a result of program enhancements related to IJA. Although DEQ accepts loan applications at any time, DEQ reviews and scores applications three times per year. The most recent application round for this Intended Use Plan was Dec. 12, 2025. Application deadlines for calendar year 2026 are April 10, 2026, and Oct. 9, 2026.

Under Oregon Administrative Rule [340-054-0025\(6\)\(a\)](#), project applications may remain on the project priority list for up to 36 months, after which the applicant can request a six-month or 12-month extension, or the application will be removed from the list. DEQ also removes project applications from the list upon execution of a loan agreement. Projects that have a design portion loan to be amended for construction remain on the IUP.

This Proposed Intended Use Plan 2027 Second Edition includes 10 new loan applications requesting \$17,901,561 from the April 2025 round of applications. This Proposed IUP 2027 Second Edition includes a total of 80 loan applications on the Project Priority List including 57 non-planning (design/construction) loan applications requesting \$436,406,162 and 23 planning loan applications requesting \$7,305,100—for a total of \$443,711,262 requested from the fund.

Table 1 - Intended Use Plan New Loan Applicants

Applicant	Application Number	Project Type and Name	Amount Requested
City of Hermiston	90137	Section 212. Design and Construction. Hermiston Feedville and 207 Sewer Main Extension	\$1,500,994.00
City of Milwaukie	70281	Section 212. Design and Construction. Kellogg Creek Sewer Relocation	\$5,000,000.00

Applicant	Application Number	Project Type and Name	Amount Requested
City of Sumpter	51329	Section 212. Planning. Sumpter Wastewater Compliance Planning	\$100,000.00
Cloverdale Sanitary District	69563	Section 212. Design and Construction. New Sequencing Batch Reactor (SBR) Wastewater Treatment Plant	\$4,068,920.00
Devils Lake Water Improvement District	85079	Section 319. Construction. Devils Lake Dredging Project	\$750,000.00
Medford Irrigation District	52662	Section 319. Planning. Medford Canal Piping Planning Project	\$100,000.00
Oak Lodge Water Services	24589	Section 212. Construction. Secondary Clarifier Refurbishment Project	\$5,000,000.00
Owyhee Irrigation District	27737	Section 319. Design and Construction. Snivley Bench Flume and Ontario-Nyssa Pumping Project	\$1,021,647.40
Port of Tillamook Bay	28081	Section 212. Planning. Septage Receiving Station Relocation Planning Project	\$60,000.00
Wedderburn Sanitary District	66020	Section 212. Planning. Facilities Plan and Collection System Assessment Project	\$300,000.00

Since July 1, 2025 (beginning of SFY 2026) through June 30, 2026, DEQ executed 65 new and amended loan agreements totaling \$193,423,236 listed on Table 2 below (D = Design, C = Construction, P = Planning):

Table 2 – New and Amended Loans SFY 2026 (July 1, 2025 – June 30, 2026)

Project descriptions include:

- Planning loan applications, design and construction loan applications, applications with loans signed for design to be amended for construction.
- Type of loan, loan amount and application numbers.
- A description of the project goals and water quality benefits.
- The section of the Clean Water Act the project qualifies for: Section 212 (treatment works), Section 319 (nonpoint source pollution control) or Section 320 (estuary management).
- Reference to a Comprehensive Conservation and Management Plan for estuary management projects if applicable.
- Projects eligible for IIJA Emerging Contaminants funding included in project descriptions.

Project descriptions

Planning Loan Applications

City of Bandon (Coos County)

Loan application number: 77131

Amount requested: \$100,000

Section 212, Planning, Wastewater Facility Plan. An update to the 2002 Wastewater Facility Plan will be developed, evaluating the existing plant's system conditions, capacity, any NPDES permit renewal requirements, develop plans for flood resiliency, and identify improvement projects with potential benefits of reducing inflow and infiltration, operations costs, energy consumption, and improving the useful life of equipment, including the pump stations and collection system reliability. A 3-phase capital improvement plan will be developed, including preliminary designs, layouts, costs, scheduling, and phasing of priorities over a 20-year period. A financing plan will be formulated considering O&M costs of improvements projects and a draft report will be assembled for review and comment by all stakeholders.

City of Bend (Deschutes County)

Loan application number: 26677

Amount requested: \$500,000

Section 212, Planning, Stormwater Master Plan. Planning project to generate an updated stormwater master plan for the City of Bend. The city has specific deadlines in their NPDES MS4 permit. This project will incorporate recommendations for projects, programs, policies, and standards that will be targeted at regulatory compliance and meeting deadlines. The plan will address drainage and density, hydrogeological assessments, stakeholder engagement, existing facilities condition and capacity assessment, and city stormwater goals.

Crescent Sanitary District (Klamath County)

Loan application number: 87385

Amount requested: \$100,000

Section 212, Planning, Gilchrist Redesign and Replacement – Preliminary Engineering Report. Crescent Sanitary District will conduct a preliminary engineering report to replace the collection system for the community of Gilchrist. The existing system is comprised of terra cotta pipe,

which is failing due to age and root encroachment and likely leading to contamination of the Little Deschutes River, residential yards and subsurface aquifers used to supply public drinking water for Gilchrist. The existing system needs to be mapped and surveyed including mainlines, location of manholes and analysis of design calculations to relocate all mainline and manholes for access in the future for maintenance. The goal of this analysis is to connect as many homes as possible to a gravity system. The preliminary engineering report can be used in public outreach forums with the community for education, input and support for plans and a future collection system project. This planning effort does not include the preparation of bid documents for construction, specifications, or construction of the redesigned system. Crescent Sanitary District can use the plan and design information to apply for additional funding to complete construction. The preliminary engineering report and environmental assessment portion of this project is a critical first step in replacing the collection system in the future.

City of Culver (Jefferson County)

Loan application number: 54946

Amount requested: \$100,000

Section 319, Planning, City of Culver Stormwater Improvement Project - Stormwater Master Plan. The City of Culver requests \$100,000 to support planning for a new stormwater system, including comprehensive design, wetland delineation and stream function assessment, environmental review, and cultural resource evaluation and monitoring. This effort will mitigate chronic drainage issues and flooding across the City by implementing a phased stormwater infrastructure upgrade that emphasizes the incorporation of existing and natural infrastructure, such as the existing and adjacent constructed wetlands located north of the City, mitigating strain on City capacity and finances in the long term.

Emerging Contaminants: The proposed planning effort will guide the design and implementation of a new stormwater system to better manage emerging contaminants such as sediments, pesticides, nutrients, and endocrine-disrupting chemicals. The current system is undersized and cannot adequately treat these pollutants, which pose environmental and public health risks. Located in a low-lying basin surrounded by farmland, the City receives agricultural runoff during flood events that clogs ditches and pipes with contaminated debris. Crews have also observed oily sheen on roadways, indicating oil-based contamination. The planned improvements will increase conveyance capacity, reduce flooding, and decrease exposure to pollutants. Stormwater will be routed through constructed wetlands that provide passive treatment through sedimentation, biological uptake, and natural breakdown, reducing contaminant movement into soil and groundwater. Although sampling has not yet been conducted, the City recognizes the risk of emerging contaminants and is monitoring evolving regulatory requirements.

City of Dayville (Grant County)

Loan application number: 27499

Amount requested: \$100,000

Section 212, Planning, City of Dayville Sewer Project. The purpose of the planning effort is to enable the City of Dayville to be able to get a mixing zone study, a rate study, a feasibility study and to get the recycled water reuse plan updated. These studies and plan are important so that the City of Dayville can ensure the safety of the public health and make sure they are within their permit regulations. The feasibility study will help the city determine what updates will be needed for the existing sewer facility.

Gleneden Sanitary District (Lincoln County)

Loan application number: 00742

Amount requested: \$3,750,000

Section 212, Planning, Wastewater Treatment Plant Facilities Plan. The facility plan will further identify and solidify options for a new wastewater treatment plant and outfall. The plan will include a final project recommendation. The objective of the plan is to benefit public health by safely and environmentally providing sanitary sewer service.

City of Gold Beach (Curry County)

Loan application number: 55016

Amount requested: \$100,000

Section 212, Planning, Wastewater Facility Plan. An update to the 2006 Wastewater Facilities Plan will be developed evaluating the existing plant's system conditions, capacity, NPDES permit renewal requirements and identify improvement projects with potential benefits of reducing inflow and infiltration, operations costs, energy consumption and improving useful life of equipment, including pump stations and collection system reliability. A 3-phase capital improvement plan will be developed, including preliminary designs, layouts, costs, scheduling and phasing of priorities over a 20-year period. A financing plan will be formulated considering O&M costs of improvements projects and a draft report will be assembled for review and comment by all stakeholders.

City of Heppner (Morrow County)

Loan application number: 31544

Amount requested: \$100,000

Section 212, Planning, Wastewater Facilities Plan. The City is proposing to complete a Wastewater Facilities Plan (WWFP) to evaluate the present condition of the wastewater system components, establish design criteria for the proposed planning period, identify recommended system improvements, and pursue project design and construction funding. The WWFP will also include large-scale collection system investigations to evaluate the integrity of the collection system piping, which has not been inspected in more than 30 years.

City of Hines (Harney County)

Loan application number: 70616

Amount requested: \$50,000

Section 212, Planning, City of Hines Wastewater Facilities Plan Revision. The City of Hines intends to revise its draft WWFP in accordance with DEQ requirements. The WWFP revision will include updated design criteria; evaluation of the existing collection, treatment, and disposal systems; development of improvement alternatives and estimated project costs; determination of a preferred alternative for a long-term solution; and a complete financial analysis of the preferred alternative. The completed WWFP will provide the city with a comprehensive planning document that will identify and prioritize needed system improvements and allow the City to appropriately plan and budget for the selected improvements, including improvements to accommodate the recently proposed residential development. The planning effort also includes developing a Wastewater System Emergency Response and Notification Plan, which is a Water Pollution Control Facilities (WPCF) Permit requirement.

City of Lakeview (Lake County)

Loan application number: 71015

Amount requested: \$100,000

Section 212, Planning, Lakeview Wastewater Facility Plan, Infiltration & Inflow, & System Development Charge System Study. The proposed planning effort will develop a Wastewater Facility Plan (WWFP) for the Town of Lakeview, which to this point has never had a WWFP, along with an Infiltration & Inflow (I&I) Study. This will allow for the development of a System Development Charge (SDC)/Rate Study, which will allow the Town to appropriately charge its customers to support future capital projects and improvements. Together, the WWFP, I&I Study and Rate Study will allow the Town to ensure it can continue providing reliable sewer service to its customers while also maintaining permit requirements and water quality objectives.

Medford Irrigation District (Jackson County)

Loan application number: 52662

Amount requested: \$100,000

Section 319, Planning, Medford Canal Piping Project. Medford Canal Piping Project planning loan is to complete 30% designs for piping 2.7 miles (120-year-old) section of the Medford Canal below Bradshaw Drop, 8 miles NE of City of Medford in Little Butte Watershed. The project section loses an estimated 4.2 cfs (~21%) to seepage and evaporation. By eliminating water loss (~4.2cfs) a dedicated 25% of conserved water (1.05 Fs) instream to improve habitat for ESA-listed species in Little Butte Creek (303(d) listed site for Temp., Dissolved Oxygen, E. Coli). MID will be partnering with Jackson Co. Soil and Water District for water quality monitoring and outreach and Oregon Watershed Enhancement Board (OWEB) for technical assistance on planning. The Project will improve water supply and delivery reliability to MID patrons, decrease O&M costs and reduce flood and safety related risks to nearby homes and the Bradshaw Drop.

City of Myrtle Creek (Douglas County)

Loan application number: 53710

Amount requested: \$100,000

Section 212, Planning, Facilities Plan Amendment. This new Facilities Plan will evaluate current conditions, identify sustainable alternatives and improvements, and promote continued compliance with the City's NPDES permit. Anticipated population increases over the next 20 years further underscore the need for a forward-looking strategy to protect water quality and public health.

City of Prairie City (Grant County)

Loan application number: 68409

Amount requested: \$100,000

Section 212, Planning, City of Prairie City Wastewater Facilities Plan. The Wastewater Facilities Plan will be updated to address the current wastewater system and the current and future needs. The document will provide a detailed study of the inflow and infiltration issue the system has. The document will identify projects to improve the system, reduce I/I, and expand the system into underserved areas within the city limits and Urban Growth Boundary. High potential

flow from I/I reduces the capacity of the system and increases the potential for breakdowns and overflows, creating unsafe/unhealthy conditions for the operators and the general public.

Port of Tillamook Bay (Tillamook County)

Loan application number: 28081

Amount requested: \$60,000

Section 212, Planning, Septage Receiving Station Relocation Planning Project. The Port of Tillamook Bay will determine the feasibility and evaluate options for relocating the Port's Septage Receiving Station to the decommissioned biodigester site. The study will compare each option's advantages, disadvantages, and costs; assess potential lifecycle cost savings from operational improvements at the new site; and evaluate opportunities to reuse the new site for Regional Water System development, analyzing the operational, financial and environmental impacts of locating both the Septage Receiving Station and water treatment and storage facilities at the proposed new location.

City of Reedsport (Douglas County)

Loan application number: 68700

Amount requested: \$100,000

Section 212, Planning, Wastewater Facility Plan. The Wastewater Facility Plan project will be an update to the city's 2004 Wastewater Facility System Plan, evaluating the existing plant's system conditions, capacity, NPDES permit renewal requirements, and identify improvement projects with potential benefits of reducing inflow and infiltration, operations costs, energy consumption and improving useful life of equipment, including pump stations. A capital improvement plan will be developed, including preliminary designs, layouts, costs, scheduling and phasing of priorities over a 20-year period. A financing plan will be formulated considering O&M costs of improvements projects and a draft report will be assembled for review and comment by all stakeholders.

City of Riddle (Douglas County)

Loan application number: 02531

Amount requested: \$100,000

Section 212, Planning. Wastewater Collection System Master Plan Amendment. This new plan will review alternatives for sustainable infrastructure regarding the City's aging wastewater collection system and promote compliance with the City's NPDES permit. The population trends for the City will be analyzed to provide a forward-looking strategy to protect the community's water quality and public health for the next 20 years. With a new housing development currently being implemented on the north-east side of the town an updated Plan is essential in supporting the growing community.

City of Stanfield (Umatilla County)

Loan application number: 59187

Amount requested: \$89,000

Section 212, Planning, City of Stanfield Effluent Outfall Inspection Report and Mixing Zone Study. The Effluent Outfall Inspection Report and Mixing Zone Study will analyze the City's outfall conditions, evaluate impacts of treated wastewater disposal into the Umatilla River, and State of Oregon Department of Environmental Quality

help determine the appropriate size of the City's mixing zone. The Effluent Outfall Inspection Report and Mixing Zone Study will satisfy the City's National Pollutant Discharge Elimination System (NPDES) Permit requirement of completing an Effluent Outfall Inspection Report by June 2026 and an updated Mixing Zone Study by December 2026.

City of Sumpter (Baker County)

Loan application number: 51329

Amount requested: \$100,000

Section 212, Planning, Sumpter Wastewater Compliance Planning. This project will develop a recycled water use plan and archaeological survey to support future upgrade projects. The City is currently under an MAO and facing permit compliance issues due to insufficient irrigation surface area at the disposal site for treated effluent. The Recycled Water Use Plan will directly help meet DEQ compliance timeline orders and complement the City's irrigation disposal project.

Terrebonne Sanitary District (Deschutes County)

Loan application number: 85404

Amount requested: \$100,000

Section 212, Planning, Terrebonne Sanitary District Annexation Planning. This planning loan will include: community outreach to connect with residents for additional annexation into the district, legal fees, surveying, and admin costs to support the annexation process, a contract to develop the district's user charge system, including monthly rates and connection charges, and complete preliminary engineering and design for annexed properties. Connecting more properties to the TSD will improve public health by reducing the amount of hazardous waste that leaks into the ground, local water sources, and public areas.

City of The Dalles (Wasco County)

Loan application number: 06433

Amount requested: \$650,000

Section 212, Planning, The Dalles Wastewater Plan Update. The project will provide a 10-year update to the City's 20-year Wastewater Facilities Plan as it applies to the wastewater treatment plant. The updated Plan will improve water quality and thereby protect public health of recreationists in the Columbia River by addressing a compliance issue of a broken outfall pipe. The updated Plan will identify any plant improvements needed to maintain NPDES permit compliance as the community grows, and as additional low-strength wastewater is received from new data centers.

Tumalo Basin Sewer District (Deschutes County)

Loan application number: 35320

Amount requested: \$100,000

Section 212, Planning, Tumalo Sewer Planning Phase 2: Environmental Review and Financial Readiness. This planning effort will build upon the District's Preliminary Engineering Report (PER) and wastewater planning efforts. This effort will substantially complete the State Environmental Review Process (SERP) required for future DEQ design/construction loan and update the project's financial plan - including preparing a refined 30% design cost estimate and

updating the PER pro-forma and user charge analysis with the latest project costs and financial data. By addressing environmental review and financial sustainability, the District will be prepared to secure construction funding and proceed with improving wastewater infrastructure to protect water quality, safeguarding the Deschutes River and local groundwater, and enhancing public health in Tumalo.

City of Yoncalla (Douglas County)

Loan application number: 21803

Amount requested: \$100,000

Section 212, Planning, City of Yoncalla Wastewater Treatment Plant (WWTP) Upgrades. The Dyer Partnership Engineers and Planners, Inc. (The Dyer Partnership) prepared a Wastewater Facilities Plan (WWFP) for the City of Yoncalla (City) in 2024. The WWFP was conditionally approved by the Oregon Department of Environmental Quality (DEQ) in March 2024.

Recommended WWTP upgrades, as presented in the WWFP, will address ongoing discharge permit compliance issues, as well as provide upgrades to ensure compliance with the upcoming ammonia discharge permit limit.

Wedderburn Sanitary District (Curry County)

Loan application number:

Amount requested: \$300,000

Section 212, Planning, Facilities Plan and Collection System Assessment. The Wedderburn Sanitary District's Facilities Plan and Collection System Assessment project will develop a new comprehensive new Facilities Plan including treatment and collection systemwide. The project will assess the capacity and condition of the treatment and collection system to identify areas of high I&I and prioritize critical repairs and upgrades. The project will include assessment of pipelines, manholes, pump stations and control panels that are nearing the end of their useful life and treatment capacity which has been overwhelmed by inflow and infiltration (I&I).

Ultimately, this planning effort will protect public health by helping to prevent potential overflows of treatment ponds and ensure that an overflow event will not occur, thus protecting the water quality of the surrounding areas.

Design and Construction Loan Applications

Arnold Irrigation District (Deschutes County)

Loan application number: 24605

Amount requested: \$8,699,900

Section 319, Construction, Arnold Irrigation District Infrastructure Resiliency and Modernization Project. The Arnold Irrigation District Infrastructure Resiliency and Modernization Project will enclose 11.9 miles (62,868 length-feet) of open porous canal into leak-free piping resulting in the conservation of 11,083 acre-feet (AF) of water per year. Piping the canals has two immediate outcomes: (1) a substantial reduction in water quantity diverted; and (2) substantial increase of water quantity remaining instream. These outcomes have an immediate benefit to improving streamflow that will result in improvements to water quality, habitat, and habitat availability in the Deschutes River downstream from Wickiup Reservoir.

City of Ashland (Jackson County)

Loan application number: 10498

Amount requested: \$7,605,265

Section 212, Design and Construction, Wastewater Treatment Plant Headworks Upgrade. The new facilities include replacement of the existing mechanical bar screen, addition of a second mechanical bar screen and constructing a new separate downstream grit removal facility.

City of Aumsville (Marion County)

Loan application number: 24280

Amount requested: \$23,977,650

Section 212, Construction, Aumsville Wastewater System Improvements. The City of Aumsville plans to construct a new treatment plant that will meet discharge limits for ammonia related to their NPDES permit and address a Mutual Agreement and Order with DEQ. In addition to addressing ammonia, the new treatment plant will improve biological oxygen demand (BOD), total suspended solids (TSS), which will reduce bacteria, address dissolved oxygen levels and reduce nitrates in the effluent. The City will also complete upgrades to the wastewater collection system including reconstruction of 5,350 feet of gravity mainline pipe and increases to the size of pipes that are operating over capacity, particularly during storm events. The proposed improvements also include removal of biosolids from lagoons. These improvements will allow the City to treat wastewater to the higher standard to achieve compliance with the NPDES permit and increase capacity for the collection system for reliability and resiliency.

City of Bay City (Tillamook County)

Loan application number: 17848

Amount requested: \$ 730,000

Section 319, Design and Construction, Patterson Creek Culvert Replacement. The City of Bay City will remove one culvert on 7th St. and one culvert on 8th Street from Patterson Creek. The 7th St. undersized culvert will be replaced with a fish passage structure; the 8th St. culvert removal will result in an open channel. The project will also result in relocating approximately 350 linear feet of water main, 560 lineal feet of new sewer pipe, a small sewer lift station and one block of new street. This project also includes creek bed restoration, wetland and vegetated corridor plantings and placement of woody debris in the creek for habitat. As phase 1 of a much larger effort, this project will begin to bring reliability and resiliency to the city's infrastructure and crucial upgrades to address winter storms in the Pacific Northwest.

City of Bend (Deschutes County)

Loan application number: 77739

Amount requested: \$10,000,000

Section 212, Design and Construction, South Awbrey Butte Drainage Improvements. Drainage issues on South Awbrey Butte have persisted for decades and continue to inconvenience residents and require a disproportionate amount of the City of Bend's maintenance resources and funding. In 2017, the South Awbrey Butte Drainage Study was completed that identified 7 major Preferred Improvement Areas. In 2023, the highest priority PIA, the Newport Corridor Improvements Project, was completed at the base of Awbrey Butte to collect and treat runoff at the bottom of the watershed before it infiltrated into Underground Injection Control areas or discharged into the Deschutes River. The scope of this project will be to design and construct

the six remaining PIAs upstream of Newport Avenue to capture runoff and convey it to minimize property damage resulting from flooding. Specific drainage issues identified include locations of flooding, non-compliant structures, insufficient pipe capacity and inlet clogging. The project will include land acquisition for an appropriate site to address project goals within the project scope.

City of Bend (Deschutes County)

Loan application number: 73369

Amount requested: \$8,675,000

Section 212, Design and Construction, Southwest Sewer Basin Improvements Phase 3. The purpose of the project is to address sewer deficiencies in the southwest basin of the City as outlined in the 2018 Public Facilities Plan and further identified by City of Bend Utility Department including pump station decommissioning and eliminating on-site septic system issues. The installation of sewer may result in a full-width and full-depth pavement restoration within the existing roadways, as well as address any stormwater concerns within the project area. The project provides overall system reliability and will protect water quality and help eliminate potential health hazards associated with failing septic systems and/or potential pump station failures. This project addresses potential sources of emerging contaminants (including PFAS) in that pump stations and septic systems have limited (or lack) treatment capability respectively. Connecting septic systems to centralized sewer systems and eliminating pump stations are progress toward mitigating impacts of emerging contaminants.

Emerging contaminants: Eliminating pump stations, which have the potential to fail and release raw sewage as well as decommissioning septic systems that may contribute PFAS and other pollutants, reduces the risk for discrete conveyance and contamination of groundwater sources and allows for the opportunity to centrally collect and treat at a publicly operated treatment facility. Centralized treatment affords the City an opportunity to provide treatment service at scale for current and future pollutants of concern. Many septic systems are not currently designed, or in an existing condition, to remove such pollutants. PFAS has been found in toilet paper products and also originates from consumer products such as food packaging, nonstick cookware, and household cleaning products. Due to the common presence of these products in households, raw sewage may contain PFAS. Connecting septic systems to centralized sewer systems and eliminating pump stations are progress toward mitigating impacts of emerging contaminants.

City of Bend (Deschutes County)

Loan application number: 19470

Amount requested: \$1,590,000

Section 212, Design and Construction, Airpark and Waco Sewer Project. This project is part of the City of Bend's Septic to Sewer Conversion program. Project includes design and construction of approximately 1,920 linear feet of pressure sewer main and service laterals, tying into the existing sewer main. The project will allow 22+ properties to decommission septic systems and connect to public sewer supporting water quality protection and helping to eliminate potential public health hazards associated with failing septic systems.

Emerging contaminants: Decommissioning septic systems that may contribute PFAS, and other pollutants reduces the risk for discrete conveyance and contamination of groundwater sources and allow for the potential opportunity to centrally collect and treat at a publicly operated treatment facility. Connecting septic systems to centralized sewer systems is progress towards mitigating impacts of emerging contaminants.

City of Bend (Deschutes County)

Loan application number: 31695

Amount requested: \$2,000,000

Section 212, Design and Construction, Denning and Juniperhaven Sewer Project. This project is part of the City of Bend's Septic to Sewer Conversion program. Project includes design and construction of approximately 2,085 linear feet of pressure sewer main and service laterals, tying into the existing sewer main. The project will allow 24+ properties to decommission septic systems and connect to public sewer supporting water quality protection and helping to eliminate potential public health hazards associated with failing septic systems.

Emerging contaminants: Decommissioning septic systems that may contribute PFAS and other pollutants reduces the risk of groundwater contamination and allows wastewater to be centrally collected and treated at a publicly operated treatment facility. Connecting septic systems to centralized sewer systems is progress towards mitigating impacts of emerging contaminants.

City of Chiloquin (Klamath County)

Loan application number: 67109

Amount requested: \$1,300,000

Section 212, Design and Construction, City of Chiloquin Wastewater Treatment Plant Replacement. The City of Chiloquin's existing wastewater treatment facility does not meet the NPDES discharge limits for Biological Oxygen Demand BOD and Total Suspended Solids. The discharge also exceeds the TMDL limits for dissolved oxygen and phosphorus which impact the Williamson River. The city will construct a new lagoon storage and effluent reuse facility and will abandon the existing plant and outfall pipe to the Williamson River. The project includes a new or modified pumping system that will provide transmission from the existing plant location to a new two-cell facultative lagoon system of approximately 15 acres total with maximum eight feet water depth to treat effluent and store reclaimed water for reuse in irrigation. The city will disinfect effluent in chlorine disinfection facilities before transferring to an irrigation system. An irrigation pump station will pump the reclaimed water from the lagoon cells to a sprinkler system that will irrigate natural vegetation in a 36-acre field. The new project will permanently eliminate discharge to the Williamson River. DEQ plans to issue a WPCF permit for the new lagoon facility in 2022.

Clackamas Water Environmental Services (Clackamas County)

Loan application number: 12032

Amount requested: \$1,200,000

Section 319, Design and Construction, Sponsorship Option. Rose Creek and Mount Scott Creek Riparian Restoration Projects. Clackamas WES will improve in-stream/ riparian habitat, water quality, and public access by such as activities as installing log jams & boulders, adding public signage, remove invasives and restore native vegetation, or creating access where needed at 2 locations: Rose Creek and Mt Scott Creek Oak Bluff. This work will improve water quality by increasing filtration time, reducing pollutant levels, and decreasing runoff; it will involve local partners and landowners; and will build on previous CWSRF funded work nearby at 3 Creeks.

Clackamas Water Environmental Services (Clackamas County)

Loan application number: 65331
Amount requested: \$23,500,000

Section 212, Construction, Sponsorship Option. Middle Clackamas Interceptor Improvements. With the Middle Clackamas Interceptor Improvements project, Clackamas WES will address capacity constraints and aging infrastructure within a key segment of WES' wastewater collection system. The project includes rehabilitation and upsizing of approximately 2.4 miles of 42-inch to 48-inch diameter sewer pipeline and associated manholes, as well as slip lining existing sewers, abandonment of existing sewers and manholes, roadway restoration and bypass pumping. These improvements to address deteriorated interceptor assets beyond their useful life and construct new conveyance capacity will reduce the risk of sanitary sewer overflows, protecting both public health and water quality.

Cloverdale Sanitary District (Tillamook County)

Loan application number: 69563
Amount requested: \$4,068,920

Section 212, Design and Construction, New Sequencing Batch Reactor (SBR) Wastewater Treatment Plant. Cloverdale Sanitary District will retrofit the existing facility to transition from an aging/failing (51+ years old) activated sludge plant to a Sequencing Batch Reactor (SBR) plant. Upgrades & additions include upgrading the Influent Pump Station, a new elevated headworks structure, converting current Aeration Basin/Clarifier to an Aerobic Digester, a new SBR Complex to include a new steel tank and control panels, rebuilding the current Tertiary Filter, updating the current Chemical Feed System, and modifying the current Chlorine Contact Chamber. The new plant will increase reliability and reduce the risk of untreated or partially treated wastewater entering the Nestucca River, supporting compliance with water quality standards and protecting local aquatic ecosystems.

City of Culver (Jefferson County)

Loan application number: 17253
Amount requested: \$1,820,500

Section 212, Design and Construction, Wastewater Expansion Project. This project will acquire land adjacent to the current WWTF lagoons for the construction of an additional storage pond. The city is approaching its limit of winter months wastewater storage. Available storage for wastewater ponds is 17.59 MG. Average hold for 7-month hold period is 16.4 MG. This project will purchase the land adjacent to the current wastewater storage lagoons with the purpose of constructing additional storage ponds. Additionally, the land acquisition will be large enough for the city to construct storm water treatment wetlands for their NPS storm water conveyance and treatment project.

Emerging Contaminants: The land purchase will allow the City to own and expand the stormwater treatment wetlands. Currently, stormwater runoff from high-traffic roadways, agricultural land, and Helena Agri-Enterprises, an agricultural chemical manufacturing facility, is conveyed through open ditches into an existing wetland without pretreatment. The runoff likely contains pesticides, herbicides, fertilizers, and roadway-derived contaminants such as tire wear particles, including 6PPD and 6PPD-Q. The expanded constructed wetland system will improve pollutant removal through sedimentation, filtration, plant uptake, and microbial degradation. Wetland soils and vegetation promote sorption and breakdown of organic compounds, and increased hydraulic residence time enhances the degradation of toxic compounds such as 6PPD-Q before they reach downstream waterways.

City of Culver (Jefferson County)

Loan application number: 87677

Amount requested: \$1,397,053

Section 319, Design and Construction, Stormwater Phase 2- Project 1. This project represents Phase 2 of a citywide stormwater infrastructure improvement effort. During heavy rainfall events, several city streets and downtown homes and businesses experience flooding from untreated stormwater. To address this, the city needs improved stormwater conveyance and treatment systems. This phase includes boring under the BNSF railway to connect to the existing stormwater treatment wetlands, as boring is required to install the large-diameter conveyance piping. Project funding will also support the purchase of a water truck for cleaning existing stormwater pipes, minor improvements to the treatment wetlands, project administration costs (including legal, engineering, and permitting), and road improvements needed for equipment mobilization.

Emerging Contaminants: This project directly addresses emerging contaminants in stormwater, including pesticides, herbicides, fertilizers, tire wear particles, 6PPD, and its transformation product 6PPD-Q. Currently, runoff from high-traffic roadways, agricultural lands, and the Helena Agri-Enterprises, an agricultural chemical manufacturing facility, enters an existing wetland untreated. The City also lacks sufficient conveyance infrastructure, resulting in flooding during heavy rainfall events and uncontrolled discharge of contaminated stormwater. The project will increase treatment capacity by conveying stormwater to an expanded constructed wetland system designed to enhance pollutant removal through sedimentation, filtration, absorption, and microbial degradation. These processes have been demonstrated to break down organic contaminants and reduce concentrations of pesticides and herbicides. As a result, this project will significantly reduce the load of emerging contaminants discharged to receiving waters and improve aquatic ecosystem protection.

Devils Lake Water Improvement District (Lincoln County)

Loan application number: 85079

Amount requested: \$750,000

Section 319, Construction, Devils Lake Dredging Project. The Devil's Lake Dredging project proposes to dredge up to 2,000 cubic yards of accumulated sediment from the lower (west) end of Devil's Lake in Lincoln City, Oregon to improve natural flows. The site area annually fills with depositions of sand and log debris, accumulating behind an existing concrete dam and weir, reducing water hydraulic capacity while creating a flood hazard and barrier to natural flows. This improved circulation is expected to lower water temperatures in stagnant areas, increase dissolved oxygen levels, and reduce the accumulation of nutrients (phosphorus) and subsequent algal growths.

East Fork Irrigation District (Hood River County)

Loan application number: 75993

Amount requested: \$7,000,000

Section 319, Design and Construction, East Fork Piping and Hydropower Project. The East Fork Irrigation District (EFID) proposes piping a section of open canal and installing an in-conduit hydropower facility to generate renewable energy and deliver pressurized water to water users. A powerhouse building will be constructed to house the turbine, valves, generator, switchgear,

flow meter, and electrical controls. This project will reduce seepage and evaporation, reduce end spills, and conserve water instream. The District would allocate 75% of the total water saved instream, improving streamflow in the East Fork Hood River and the Hood River during irrigation season. This project will also generate reliable renewable energy for Hood River County - generating an estimated 2.6 million kWh annually.

City of Grass Valley (Sherman County)

Loan application number: 40987

Amount requested: \$2,800,000

Section 212, Design and Construction, Wastewater Collection and Lagoon System. The City of Grass Valley does not have a community-wide wastewater system but instead relies on individual septic fields. Many of these septic systems are past their useful life and failing. This project will construct a new community-wide gravity sewer collection system, a duplex pump station, a facultative treatment lagoon, and a recycled water irrigation system.

City of Gresham (Multnomah County)

Loan application number: 07921

Amount requested: \$25,570,000

Section 212, Design and Construction, WWTP Anaerobic Digestion and Cogeneration Expansion, Phase 1. The City of Gresham WWTP currently has two 1-million-gallon anaerobic digesters, one with a fixed cover and one with a floating cover that provides gas storage volume. Under existing process conditions, the digesters operate near their maximum hydraulic capacity. The project has two major components: 1) Construct a new 1-million-gallon anaerobic digester (Digester #3) to provide redundancy and increase overall digestion capacity for the WWTP. 2) Construct a new digester control building to house equipment associated with the new digester, such as heat exchangers, recirculation pumps, digested sludge pumps, and control center.

Harbor Sanitary District (Curry County)

Loan application number: 91516

Amount requested: \$1,750,000

Section 212, Design and Construction, Harbor Sanitation Sewer Improvements. Harbor Sanitary District manages a sewer collection system composed of gravity sewer pipe, sewer force mains, and five pumping stations. The system includes old asbestos-cement and concrete pipe, which must be removed and disposed of at distant sites. The gravity pipe network is experiencing inflow and infiltration from leaking joints, holes and cracks and wastewater can leak into the ground during dry times. The project includes replacing approximately 5,200 linear feet of pipe, concrete manholes, PVC sewer pipe, lining if appropriate, and road resurfacing. Some pipe may be repaired in place with liners or by bursting, which will be determined during the design phase.

City of Hermiston (Umatilla County)

Loan application number: 90137

Amount requested: \$1,500,994

Section 212, Design and Construction, Hermiston Feedville and 207 Sewer Main Extension. This project will extend sanitary sewer service into the recently annexed Feedville Road

corridor; enhancing economic & job growth opportunities for the community. The City partnered with the private developer to route this piping via Highway OR207; according to the 2021 Sewer Collection System Master Plan. The existence of sanitary sewer piping along this route will facilitate long-range transition away from septic systems for a number of existing properties along OR207, as well as preventing the development of new septic systems within that area, and divert those flows to the City of Hermiston's Recycled Water Treatment facility. Existence of this new 2.5 miles of sanitary sewer piping also will help stimulate additional housing development by greatly reducing the cost of utility extensions to a significant amount of vacant developable land within the Urban Growth Boundary of the largest city in eastern Oregon.

Hermiston Irrigation District (Umatilla County)

Loan application number: 40122

Amount requested: \$6,000,000

Section 319, Design and Construction, B-Line Lateral Modernization Project. This project will pipe the B-Line lateral (owned by Bureau of Reclamation) to improve HID operations and water management, eliminate leakage from open canals, improve the quality of conveyed irrigation water by eliminating NPS pollution, and support future on-farm innovations. B-Line loses up to 2.77 cfs per day from seepage and evaporation - B-Line irrigation water also interacts with Cold Springs Wash drain which ultimately connects to the Columbia River. Major project components include: replacing the siphon at the head of the B-Line, installing pressure rated pipe in open canal, replacing PVC or concrete pipe with pressure rated pipe, installing pressure rated pipe in new alignments, decommissioning open or non-pressured pipe, installing potential booster pumps and/or pump stations to ensure appropriate pressurization. The project will enhance water quality by diverting less water, lowering water temperature, and less water lost to evaporation and seepage, and support long-term goals in the 2024 Oregon Nitrate Reduction Plan for the Lower Umatilla Basin Groundwater Management Area (LUBGWMA). 75% of the project's saved water would be dedicated to the Columbia River or Cold Springs Reservoir.

Emerging contaminants: pesticides and herbicides – the project will allow Hermiston Irrigation District to eliminate the need for aquatic herbicide treatments on the B-Line system to control aquatic weeds and algal blooms.

City of Lincoln City (Lincoln County)

Loan application number: 79103

Amount requested: \$8,000,000

Section 212, Design and Construction, 2nd Street Infiltration and Inflow Project. SE 2nd Street Inflow & Infiltration Project (Project) includes construction to upgrade an existing 14-inch asbestos-cement (AC) sanitary sewer line to replace an existing sanitary sewer line (constructed in 1968) that crosses wetland and under Devils Lake. To eliminate inflow and infiltration (I&I) and to meet NPDES Permit for temperature (copper and zinc) and reducing flow. The project is located east of U.S. Highway 101 (US101) between SE 1st Street and south of NE 6th Street. The project will substantially reduce the amount of sewage that currently is pumped and treated at the treatment plant.

City of Madras (Jefferson County)

Loan application number: 08736

Amount requested: \$1,800,000

Section 212., Design and Construction. Mountain View Sewer Extension Phase 2. This project will extend the gravity sewer to the Mountain View subdivision. The project's objective is to expand the gravity sewer to property owners currently on septic systems, decommission septic systems, and have the properties connect to the city sewer.

Medford Irrigation District (Jackson County)

Loan application number: 81809

Amount requested: \$4,000,000

Section 319, Design and Construction, Joint System Canal Modernization Project. The project will pipe 11.1 miles of the existing Joint System Canal and add roughly 0.4 miles of new siphon routes, for a total of about 11.5 miles of canal converted to pressurized pipeline. It will upgrade three existing siphons—Lake Creek, Wyant, and Osborne—and install three new siphons, allowing the system to be straightened and shortened while retiring about 1.6 miles of open canal. In addition, the project will upgrade 24 irrigation turnouts to enable pressurized water delivery, and some of these turnouts may be designed to accommodate fire-hydrant fittings so they can serve as a water supply for wildland firefighting.

City of Milwaukie (Clackamas County)

Loan application number: 70281

Amount requested: \$5,000,000

Section 212, Design and Construction, Kellogg Creek Sewer Relocation. The City of Milwaukie will relocate a city-owned sewer line that currently crosses Kellogg Creek. The project includes construction of a new sanitary sewer pump station and associated force main to replace the existing gravity sewer crossing at Kellogg Creek. Relocation is necessary to protect waterway function and ensure continued, reliable sewer service; relocating the sewer line crossing will improve water quality by eliminating the risk of sewage leaks or spills into Kellogg Creek, removing a potential debris trap and flow obstruction, and allowing for proper long-term maintenance of the sewer system.

City of Mosier (Hood River County)

Loan application number: 61520

Amount requested: \$1,478,301

Section 212, Design and Construction, Implementation of the City of Mosier LIDA Stormwater Plan. The City of Mosier currently does not have a well-connected stormwater system or piped infrastructure. The Mosier City Council identified strategic goals focused on sustainable practices to protect and enhance the environment and develop and maintain a robust infrastructure system. The City will incorporate low-impact development alternatives (LIDA) for stormwater treatment into four planned projects throughout the city including an update to Mosier's sewage treatment plant, refurbished streetscapes and electric vehicle charging stations, a new building containing the fire hall/community center/city hall and a new city plaza. The landscape level and green infrastructure stormwater treatment will be built throughout the sites of the four projects. Various treatment types will be utilized including vegetated swales, extended dry basins, rain gardens, constructed wetlands, flow-through and street-side planters and porous pavement. The project will help the City achieve strategic goals for sustainable infrastructure and result in fully treated stormwater before it flows into Mosier Creek or Rock Creek to benefit watershed health.

Oak Lodge Water Services (Clackamas County)

Loan application number: 24589

Amount requested: \$5,000,000

Section 212, Construction, Secondary Clarifier Refurbishment Project. Oak Lodge Water Services will upgrade vital components in the aging secondary clarifiers for better performance. The clarifiers in question are approaching 30 years old, with mechanical mechanisms that are rusting and in need of replacement. This project will not only replace those aging mechanisms but will also add numerous updated mechanisms and technologies that were not available 30 years ago. These upgrades should improve performance and water quality by producing cleaner less turbid water thereby reducing suspended solids as well as BOD, both of which may contribute to pollution of the receiving streams, as well as having negative impacts on humans and wildlife.

Owyhee Irrigation District (Malheur County)

Loan application number: 27737

Amount requested: \$1,021,647.40

Section 319, Design and Construction, Snivley Bench Flume and Ontario-Nyssa Pumping Project. The Ontario-Nyssa pumping facility has a bank of 4 transformers to deliver water to lands of OID near the Snake River. These transformers have reached end of life and two have failed, needing replacement. Soil erosion on the hillside is threatening the structural integrity of the Snivley Bench flume, and this project will use mechanical stabilization of the hillside to stop the erosion, as well as pipe Kingman 5.4 lateral which has small leaks in the concrete liner.

City of Port Orford (Curry County)

Loan application number: 93479

Amount requested: \$254,000

Section 319, Design and Construction, Failing Vista Access Culvert Removal Project. The failing culvert removal project, an urgent project, will remove a failing culvert and associated fill, resulting in the daylighting of a natural stream by restoring stream function on a salmon stream that is located at North Fork Hubbard Creek, 0.4 miles upstream of the sole source of water for the City of Port Orford's drinking water system. The project is identified in the 2023 DEQ Approved Forest Stewardship Plan as a high priority for the city to complete because the culvert was assessed to be at high risk of failure and already partially collapsed. Due to an unexpected further collapse of the culvert in March of 2025, by not removing the failing artificial culvert it is essentially a certainty that both of the state's turbidity standards would be exceeded for an unknown period of time into the future.

City of Rainier (Columbia County)

Loan application number: 73256

Amount requested: \$12,710,000

Section 212, Design and Construction, WWTP Improvements. The City of Rainier will design and construct or install improvements to the WWTP to meet MAO and permit requirements. Improvements will include increasing plant capacity, replacing outdated equipment, installing new equipment, updating plant maintenance practices, updating the biosolids plan, and clearing the majority if not all of the deferred maintenance backlog. This will help the city come back into

compliance and maintain future compliance in the future in normal and high-volume storm events.

Rogue Valley Sewer Services (Jackson County)

Loan application number: 40184

Amount requested: \$11,059,100

Section 212, Construction, Gold Hill Regional Sewer Intertie. Construction of an intertie to connect the Gold Hill collection system to the City of Medford treatment plant. Project will include construction of pipeline, pump stations and decommissioning of the current Gold Hill treatment plant. During project design additional components may also be identified for construction.

City of Stayton (Marion County)

Loan application number: 91519

Amount requested: \$5,784,730

Section 212, Design and Construction, Evergreen and Ida Street East Pipeline Upsizing Project. The project includes: replacement of undersized pipes on Evergreen and W Ida street, upsizing gravity main along these road segments, and installing approximately 2,720 LF of 15-inch pipe on Evergreen and approximately 2,780 linear feet of 18-inch pipe on West Ida Street.

City of Stayton (Marion County)

Loan application number: 27093

Amount requested: \$3,388,979

Section 212, Design and Construction, Mill Creek Force Main Extension and Gardner Pump Station Displacement. Mill Creek Force Main Extension - The force main on Mill Creek will be extended to reroute flows away from Jetters Way which has capacity issues. Force main will instead connect to a discharge vault upstream of the WWTP headworks. Gardner Pump Station Displacement - The gravity mains near the Gardner Pump Station are at capacity. Wastewater flow will be rerouted, and the Gardner pump station will be decommissioned. New gravity pipe will be installed on N. Gardner Ave.

City of St. Helens (Columbia County)

Loan application number: 53117

Amount requested: \$16,400,000

Section 212, Design and Construction, Sanitary Sewer Capacity Improvements. The City of St. Helens Sanitary Sewer Capacity Improvements Project will focus on three critical sanitary sewer basins (Basins 4, 5, and 6). As noted in the City's November 2021 Wastewater Management Plan, the majority of the City's sewer mains are currently operating at or above capacity. The project includes design and construction and will replace the existing sewer trunklines with larger sized pipes. The Sanitary Sewer Capacity Improvements Project will achieve several objectives by increasing the capacity in Basins 4, 5, and 6: reduce risk of potential sanitary sewer overflows in the collection system and manholes, which will protect public health and streams; reduce inflow and infiltration in the collection system and provide for growth and expansion into the City's Urban Growth Boundary.

Talent Irrigation District (Jackson County)

Loan application number: 39460

Amount requested: \$1,250,000

Section 319, Design and Construction, Billings Siphon & Eastside Canal Project. The Talent Irrigation District (TID) proposes to modernize the Billings Siphon and Eastside Canal by assessing the conditions of the Billings Siphon, implementing recommended alternatives, which could include a combination of lining the existing pipeline, spot repairs, or installing new pipelines, and evaluate options to modernize the 23-mile Eastside Canal including piping and/or lining the canal from Emigrant Reservoir, 11-miles, to the Billing Siphon. TID hopes to reduce the risk of infrastructure failure, reduce safety risks to key transportation along Interstate 5 and Highway 99, secure water supplies for agricultural produces and reduce water seepage and evaporation 28% encouraging water efficiency and enhanced streamflow for protected aquatic species including the coho & chinook salmon.

Terrebonne Sanitary District (Deschutes County)

Loan application number: 82913

Amount requested: \$7,745,480

Section 212, Design and Construction, Terrebonne Wastewater Collection System. The unincorporated community of Terrebonne, Oregon does not have a municipal wastewater system. All developed properties rely on drain fields, sand filters, or unpermitted sewage injection wells for onsite wastewater disposal. The aging onsite wastewater disposal systems and limited soil depth and permeability are resulting in a high rate of onsite system failures, which pose human and environmental health risks including surfacing wastewater and contamination of groundwater and irrigation canals. The Terrebonne Wastewater Feasibility Study initiated by Terrebonne community members in 2019 determined that the only sustainable long-term solution is to provide a community sewer system to Terrebonne. This project includes the design and construction of a Septic Tank Effluent Pump collection system and connection with the City of Redmond Wetlands Complex. The Terrebonne STEP sewer collection system is planned for implementation in three phases. This funding request is for completion of Phase A of the system layout, which will be partially constructed by the Oregon Department of Transportation. The Phase A service area includes the commercial core and many of the currently failing residential systems. Phase A will collect wastewater within the service territory and convey the wastewater to the new City of Redmond Wetlands Complex for wastewater treatment. The objectives of this project are to minimize public/environmental health risks from untreated sewage and to provide a cost-effective alternative to the onsite disposal systems in Terrebonne.

Three Sisters Irrigation District (Deschutes County)

Loan application number: 30501

Amount requested: \$7,000,000

Section 319, Design and Construction, Three Sisters Irrigation District Floating Solar and Battery Storage. Floating solar panels to cover approximately 8 acres of a reservoir owned by TSID. The project will have water quantity and water quality benefits - the solar panels will reduce evaporation on the reservoir, improving water supply reliability for agriculture. By shading the reservoir, the solar panels will also reduce water temperature in the summer, reducing the growth of algae and aquatic weeds and improving the quality of irrigation water delivered to farms and other users. Major project components include: installing 4 megawatts

(MW) of solar panels in single connected array, attached to a series of floating modules made of HDPE to form a platform, a small shed for electrical components constructed at the edge of the reservoir, and 2.4 MW of battery storage adjacent to reservoir - 2 iron flow battery units. The project will generate an estimated 7 million kWh of renewable energy annually and create sustainable revenue for TSID to support District operations and future irrigation modernization projects.

City of Warrenton (Clatsop County)

Loan application number: 55127

Amount requested: \$3,900,000

Section 212, Design and Construction Wastewater MBR Treatment Plant. The city of Warrenton will construct a new Wastewater Membrane Bioreactor Treatment Facility to replace the City's existing SBR plant and ensure long-term compliance with its NPDES permit. The upgrades include site prep, new tanks and buildings, lagoon cleanout, and associated tasks to commission the new system. The project will significantly improve effluent quality by reducing nutrients, suspended solids, and pathogens prior to discharge, resulting in enhanced protection of receiving waters. The project will improve treatment reliability and operational resilience under existing and future flow conditions with planned for expansion to keep up with population growth.

City of Wasco (Sherman County)

Loan application number: 05137

Amount requested: \$400,000

Section 212, Design and Construction, Clark Street Sewer. The project will repair the section of the Clark Street main line that has degraded and repeatedly collapsed. When collapsed the pipe clogs and wastewater overflows onto the surface streets which then drains into the stormwater drain or into adjacent properties. The stormwater system drains into the Spanish Hollow Creek that runs through the city and close to Clark Street.

Westland Irrigation District (Umatilla County)

Loan application number: 78484

Amount requested: \$12,000,000

Section 319, Design and Construction, Community Canal Solar. Westland Irrigation District (WID or the District) is developing a community canal solar project to provide low-cost, locally produced renewable energy to irrigators and area residents. Under Oregon's Community Solar Program, 40% of the energy will be offered to local businesses, and 60% to Umatilla County residents, with at least 20% allocated to low-income community members. Covering approximately 1 mile of the District's A-line Canal with solar panels will reduce evaporation, improve water supply reliability, lower water temperatures, and reduce algae and aquatic weed growth, enhancing water quality.

City of Wilsonville (Clackamas County)

Loan application number: 61437

Amount requested: \$18,000,000

Section 212, Construction, Boeckman Creek Sewer Interceptor. This project will upsize the existing 1.4 miles of the sanitary sewer pipeline running along the Boeckman Creek greenway corridor between the Memorial Park Lift Station and SW Boeckman Road. The project will provide necessary sewer capacity to serve existing and planned residential areas on the east side of Wilsonville by upsizing the existing 12-inch -18-inch diameter pipelines to 18-inch - 24-inch diameter pipelines. The project includes addition of a pathway to provide equipment access and regular maintenance of the sewer trunk line that is currently inaccessible.

Wood River District Improvement Company (Klamath County)

Loan application number: 95475

Amount requested: \$2,000,0000

Section 319, Design and Construction, Wood River District Pumpback Project. This project will capture and reuse up to 36 cubic feet per second of irrigation tailwater from the Wood River District Improvement Company's (WRDIC) West Canal by pumping it back to upstream lands for reuse. The pumpback system will capture, convey, and reuse irrigation tailwater within WRDIC. This recycling of irrigation water will extend the availability of water throughout the growing season and also decrease phosphorus and nitrogen loading into the Upper Klamath Lake. By reducing these nutrient loads, the project will help reduce the development of harmful algal blooms.

Design loans pending construction

City of Athena (Umatilla County)

Loan application number: 96648

Amount requested: \$4,544,000

Section 212, Design and Construction, Wastewater System Improvements- 2027. The purpose of the project is to eliminate the existing mechanical treatment plant and lift station to avoid a costly plant upgrade. The existing storage pond and wetland cells can be modified to use aerated facultative lagoons for treatment, followed by the current wetland cell treatment and disposal of treated wastewater. The current discharge method will not change.

City of Gresham (Multnomah County)

Loan application number: 39194

Amount requested: \$ 2,362,593

Section 212, Design and Construction, Powell Blvd. Tree Lining. The City of Gresham will add nearly 200 trees along Powell Blvd through downtown Gresham in modified stormwater tree wells, which will be designed to capture and treat runoff from the existing roadway and infiltrate or filter the runoff using bioretention facilities that combine street trees in planters containing stormwater planting media, as well as structural soil under the sidewalk. Powell Blvd. is a primary artery running east-west through the City of Gresham; it has large stretches that are void of street trees and runoff from the roadway receives minimal treatment before flowing into the nearby fish-bearing waters of Johnson Creek. The project will also decrease urban heat zones through healthy urban trees that provide shade for the street as well as pedestrians using this busy corridor. Increasing urban tree canopy is a critical tool for creating a more resilient urban environment.

Emerging Contaminants: Powell Blvd. is a high-traffic arterial street in Gresham, which is why it was identified as a high-priority site for retrofitting with stormwater tree wells. Gresham stormwater monitoring data has identified high-traffic streets (those with greater than 1,000 vehicle trips per day) as contributing higher pollutant loads of contaminants associated with automobiles, including heavy metals, combustion by-products such as PAHs and hydrocarbons, and tire wear particles, including the recently documented anti-ozonate, 6PPD-quinone. With 20,000-30,000 vehicle trips per day, Powell Blvd. is one of the highest traffic streets in the Johnson Creek watershed, one of the few remaining steelhead and coho salmon spawning streams in the Portland/Gresham metropolitan area. Several spawning coho are usually documented in the Gresham reach of Johnson Creek each year. Research has shown that both coho and steelhead are extremely sensitive to 6PPD-quinone and that filtering stormwater through bioretention soil media removes this emerging contaminant and makes the water safe for fish. While space constraints along a busy arterial make traditional bioretention challenging to install and maintain, the innovative tree wells being proposed in this project will provide bioretention to improve water quality for fish in Johnson Creek while also providing additional benefits (shade, traffic calming, aesthetics, habitat, etc.) along this busy arterial street.

City of Eugene (Lane County)

Loan application number: 31246

Amount requested: \$1,650,000

Section 212, Design and Construction, South of the Beltline Highway Wastewater Extension. The South Beltline Highway Wastewater Extension project will extend the wastewater collection system pipeline south of Beltline Highway along Prairie Road. The project will provide public wastewater lateral services lines from the mainline to the right of way boundary at the property line. The new mainlines will be designed to flow under gravity conditions and will tie into a downstream gravity fed pipe. The project area is developed with industrial zoning, with the possibility of connecting to approximately 28 tax lots (presumed to be on septic) to the public wastewater system. **Design loan signed for \$30,000 to be amended for construction in the amount of \$1,620,000.**

City of John Day (Grant County)

Loan application number: 48819

Amount requested: \$30,000,000

Section 212, Construction, New WWTP Construction. This project will construct a new wastewater treatment facility. The existing wastewater treatment facility is well past its useful life and in need of a complete replacement and reconfiguration. This project is essential to ensure human health and safety for residents within the City of John Day as well as complying with environmental regulations and Clean Water Act standards. **Design loan signed for \$546,926 to be amended for construction.**

Ochoco Irrigation District (Deschutes County)

Loan application number: 72106

Amount requested: \$3,750,000

Section 319, Design and Construction, Community Floating Solar. The proposed project will install floating solar panels on one of Ochoco Irrigation District's reregulation reservoirs. The purpose of the floating community solar project is to provide low-cost, locally produced, renewable energy to irrigators and area residents and to improve water quality. The panels will

reduce evaporation on the reservoir, improving water supply reliability for agriculture. By shading the reservoir, the solar panels will also reduce water temperature in the summer, reducing the growth of algae and aquatic weeds and improving the quality of irrigation water delivered to farms and other users. Design loan signed for \$1,450,000.

City of Pendleton (Umatilla County)

Loan application number: 95698

Amount requested: \$9,000,000

Section 212, Design and Construction, WWTRRF Upgrades. The City of Pendleton will upgrade various components of Pendleton's Wastewater Treatment Resource Recovery Facility to increase resiliency and ensure continued compliance with the City's National Pollutant Discharge Elimination System permit. Many components of the WWTRRF were built in 1942 and 1952 and have not seen any major improvements. Upgrades include rehabilitation of the secondary digester complex, adding ferric chloride to the primary and secondary digester, a new automatic entrance gate, a new storage warehouse, and a new administration building. **Design loan signed for \$955,400 pending construction.**

Port of Morrow (Morrow County)

Loan application number: 89109

Amount requested: \$50,000,000

Section 212, Design and Construction, Secondary Treatment Improvements. The Port of Morrow has identified needs for several wastewater system improvements. Much of the current infrastructure is over 40 years old and well beyond its useful life. This project will focus on secondary wastewater treatment including upgrades to the secondary treatment operations. The project will help the Port of Morrow achieve and maintain permit compliance with DEQ. The Port is also working with EPA on Water Infrastructure Finance and Innovation Act funding for wastewater system improvements to be co-funded with Oregon CWSRF. **Design loan signed for \$2,007,550 pending construction.**

Rogue River Valley Irrigation District (Jackson County)

Loan application number: 26451

Amount requested: \$5,000,000

Section 319, Design and Construction, Agate Lake Floating Solar Project. The purpose of the floating solar battery storage project is to provide low-cost, locally produced, renewable energy to irrigators and area residents, provide backup power, improve water quality, and generate sustainable revenue. The floating solar panels will cover approx. 3 acres of Agate Lake, a reservoir owned by the Bureau of Reclamation and operated by Rogue River Valley Irrigation District. The project will have water quantity and quality benefits for RRVID and patrons. The panels will reduce evaporation on the reservoir, and reduce water temperature in the summer, reducing the growth of algae and aquatic weeds, improving the quality of irrigation water delivered to farms and other users and improving the water that flows into the Dry Creek. **Design loan signed for \$3,000,000 pending construction.**

Roseburg Urban Sanitary Authority (Douglas County)

Loan application number: 38935

Amount requested: \$3,000,000

Section 212, Design and Construction, Floating Solar at the RUSA NTS Storage Pond. RUSA has contracted with Ameresco, an Energy Services Company (ESCO), to design, develop, construct and guarantee solar PV projects at the Natural Treatment System (NTS) facility. The proposed solar PV project at NTS is a 400kW-dc installation featuring a floating solar panel system. This innovative configuration leverages the unique characteristics of the site, optimizing energy generation potential while minimizing land use. Maintaining the discharge and water quality of the effluent and stabilizing the water temperature and reducing algae growth. Additionally, the integration of renewable technologies enhances the resiliency of RUSA's facility, contributing to continuous and reliable wastewater treatment operations, bolstering the facilities resilience to extreme weather and power outages, reducing the risk of environmental contamination and risks to public health. **Design loan signed for \$1,511,941 to be amended for construction in the amount of \$1,488,059.**

City of Salem (Marion County)

Loan application number: 23167

Amount requested: \$5,292,350

Section 212, Design and Construction, Ferry Street Sewer Pump Station. This project is a replacement of a 1960s-era wastewater pump station serving a 69-acre basin in Salem's downtown core which is at the end of its useful life. The existing pump station is located in a median in an ODOT highway, is difficult to operate and maintain, requires supplemental manually operated pumping during peak flow events, presents safety risks for vehicles and City staff, and is unable to be retrofitted or significantly upgraded at its present location which presents an increasing risk for SSOs into basements, Pringle Creek, and the Willamette River. The new pump station will be relocated to an adjacent city-owned property, will be adequately sized to convey peak flows with full atomization, will be designed to current seismic code, and will include a permanent onsite emergency power generator. The new pump station will also include a dedicated emergency overflow pipe to Pringle Creek, ensuring that in the unlikely event of an SSO, overflows to basements in the basin and associated human health risks will be avoided. The additional capacity and resiliency of the new station will substantially reduce the risks of SSOs and associated public health and environmental impacts. **Design loan signed for \$1,110,000 to be amended for construction in the amount of \$4,182,350.**

South Suburban Sanitary District (Klamath County)

Loan application number: 02766

Amount requested: \$23,978,200

Section 212, Construction, SSSD WWTP Upgrades. The South Suburban Sanitary District existing lagoon system cannot meet current requirements under their National Discharge Pollutant Elimination System permit and frequently exceeds Total Maximum Daily Load limits. The SSSD Wastewater Treatment Plant is not expected to meet the new discharge limits for nitrogen and phosphorus. The SSSD will complete upgrades to the existing WWTP including the installation of a moving bed biofilm reactor (MBBR) treatment system, disinfection improvements, recycled water capabilities, effluent pump station, biosolids processing facilities, influent pump station improvements, headworks improvements, and existing treatment lagoon rehabilitation. These improvements will ensure that the future system can meet NDPES compliance for nitrogen and phosphorus discharge limits and protect water quality in the Klamath River. **Design loan signed for \$6,000,000 pending construction.**

Tri City Joint Water and Sanitary Authority (Douglas County)

State of Oregon Department of Environmental Quality

Loan application number: 81421
Amount requested: \$2,000,000

Section 212, Design and Construction, Inflow and Infiltration Improvement Project. The purpose of the project is to significantly reduce peak hydraulic flows in the collection system resulting from excessive inflow and infiltration into the collection system. During peak flow periods the wastewater treatment facility operated by the City of Myrtle Creek approaches peak hydraulic capacity. If the treatment facility is inundated with damage can occur to the disinfection system rendering it inoperable for an extended period of time. The project will significantly reduce the risks of overflows and inundation of the wastewater treatment facility, which could directly impact public health and water quality. The project will apply various state-of-the-art repairs commonly used in the industry, including sewer line replacement, cast-in-place pipe, lateral repairs, structure lining, and other mitigations and repairs to be fully defined in the project design. The design process will fully define the types of repairs and locations needed to ensure the greatest possible reductions of inflow and infiltration.

City of Umatilla (Umatilla County)

Loan application number: 51054
Amount requested: \$10,701,000

Section 212, Construction, Umatilla WWTP Capacity Improvements. The project will upgrade elements of the collection system and WWTF processes and will have four primary elements:

- Increase size of 380 feet of collection system mainline from 18-inch to 24-inch.
- Upgrade and update headworks.
- Upgrade the current UV disinfection system.
- Install a new belt filter press.

These upgrades will increase the treatment capacity and replace outdated equipment. **Design loan signed for \$200,000 pending construction.**

City of Wilsonville (Clackamas County)

Loan application number: 28629
Amount requested: \$11,000,000

Section 212, Design and Construction, WWTP Aeration Basin Expansion. The City of Wilsonville will increase the capacity of secondary wastewater treatment processes by constructing a new (fourth) aeration basin adjacent to existing aeration basins: coarse bubble mixing, fine bubble aeration diffusers, intermediate baffle walls, mixed liquor recycle pumping; basin covers and connections to outdoor odor control system, instrumentation and control systems; modify the influent splitter box to include a fourth gate to evenly distribute influent between aeration basins; access for equipment and maintenance around the new aeration basin expansion; add an additional 3,000 scfm blower to provide adequate air flow to the new aeration basin. The project will ensure the WWTP meets the NPDES permit limits. **Design loan signed for \$2,000,000 to be amended for construction.**

City of Winston (Douglas County)

Loan application number: 97795
Amount requested: \$4,000,000

Sec. 212, Design and Construction, Sewer Siphon Crossing and Abraham Mainline Replacement. Project 1 is to replace the aging and undersized inverted sanitary sewer system that crosses the South Umpqua River to convey sanitary sewer from the City of Winston to the Winston-Green Wastewater Treatment Facility. This task will include design and construction of a new inverted siphon under the Umpqua River as well as installation of a surge/flow equalization basin to better regulate surges in flow. Project 2 is to replace the undersized sewer mainline from near Lookingglass Road to the Snow Avenue Lift Station. Work scope associated with this task will include upgrading the piping (size and materials) as well as upgrading/installation of new manholes and general landscaping. Project 3 is to replace the stretch of undersized and leaky pipeline along Highway 42 from Abraham Avenue West to City Limits. As with Task 2, this will include replacement of piping and installation of new/upgraded manholes and appurtenances. **Design loan signed for \$205,000 to be amended for construction.**

Table 3– Eligible Emerging Contaminants Projects – *estimated amounts*

Note: One emerging contaminants award per borrower per State Fiscal Year.

Applicant	Application Number	Project	EC Amount
City of Gresham	39194	Powell Blvd. Tree Lining (stormwater)	\$ 1,000,000
Hermiston Irrigation District	40122	B-Line Lateral Modernization Project	\$1,000,000
City of Bend	73369	Southwest Sewer Basin Improvements Phase 3	\$1,000,000
City of Bend	31695	Denning and Juniperhaven Sewer Project	\$1,000,000
City of Bend	19470	Airpark and Waco Sewer Project	\$1,000,000
City of Culver	54946	City of Culver Stormwater Improvement Project - Stormwater Master Plan	\$100,000
City of Culver	17253	Wastewater Expansion, Land Acquisition	\$910,250
City of Culver	87677	Stormwater Phase 2-Project 1	\$698,527
Total			\$6,708,777

Priority scoring and ranking criteria

DEQ uses criteria categories in Oregon Administrative Rules to score and rank applications on this Intended Use Plan Project including water quality standards and public health considerations, watershed health benefits and other considerations. [Appendix 5](#) includes detailed CWSRF scoring criteria for Non-planning and Planning Loans.

Project priority list

[Appendix 1A](#) and [Appendix 1B](#) includes all loan applications, including non-planning and planning applications and those ready to proceed to an executed loan agreement. An applicant must complete all applicable Clean Water State Revolving Fund loan requirements before DEQ will execute a loan agreement. The project priority list includes all loan applications in rank order, project scores, applicant, application number, amount requested, EPA needs category, water quality permit number, green project reserve category and dollar amount, small community as defined under Oregon Administrative Rule [340-054-0010\(28\)](#) and planning. Rank order shifts as loan applications are added and removed from the project priority list.

DEQ will only finance a project that is included in the Intended Use Plan. Additionally, loan applicants must satisfy all Clean Water State Revolving Fund loan requirements prior to receiving an official loan offer from DEQ. Loan requirements include but are not limited to: documentation of a reliable repayment source, authority to undertake the proposed project, a land use compatibility statement, an environmental review, audited financial statements, project budget and approved project planning documentation.

When an applicant satisfies all loan requirements, the applicant is considered “ready to proceed” and DEQ will begin the loan agreement execution process. Appendix 2 estimates applications ready to proceed to a loan. A total of 61 applications are estimated ready to proceed for the remainder of SFY 2026 and through SFY 2027 (31 applications ready to proceed to a loan March – June 30, 2026, and 30 applications estimated ready to proceed July 1, 2026 – June 30, 2027).

Funding award bypass procedure

DEQ estimates funds are available for projects ready to proceed for remainder of SFY 2026 and SFY 2027. Funds are not committed until an applicant is ready to proceed and signs a loan. In the event the program does not have sufficient funds available to finance all projects that are ready to proceed, DEQ will award funding based on highest ranking project that is ready to proceed. If an applicant declines funding, DEQ will go to the next highest-ranking project and offer funding to that applicant until all available funds have been committed. DEQ gives priority to increasing existing loans (i.e. design portion loan to be increased for construction) over new applications on the Intended Use Plan.

Estimated funds available for state fiscal year 2027

The program is experiencing an increase in demand for funding with 78 applications requesting a total of \$452,209,701 in the Intended Use Plan SFY 2027 Initial Edition over a three-year period. Applicants can remain on the IUP for up to 36 months and not all applicants will be ready to proceed with a loan this year. DEQ estimates 30 applications ready to proceed for remainder of SFY 2026 through June 30, 2026 (\$79,302,437) and 30 applicants ready to proceed in SFY 2027 July 1, 2026 – June 30, 2027 (\$203,998,662) for a total of \$283,301,099 (see Appendix 2 – Applicants estimated ready to proceed). Several of these loans will be design portion only to be increased for construction (not for the full amount requested initially). The program estimates \$136,863,816 funds available for SFY 2027. Continued federal funding to capitalize the program and providing principal forgiveness as required is critical to support Oregon CWSRF to finance water quality and infrastructure projects for Oregon communities over the next three years and in perpetuity.

[Appendix 3](#) provides the calculation of funds available for state fiscal year 2027 including the projections for state fiscal year 2027-28. This calculation includes the federal fiscal year 2026 annual base capitalization grant in the amount of \$8,068,000 federal fiscal year 2026, federal fiscal year 2026 IIJA supplemental capitalization grant in the amount of \$27,829,000 and federal fiscal year 2026 IIJA emerging contaminant capitalization grant in the amount of \$2,402,000. For SFY 2028, the program estimates an annual base cap grant in the amount of \$8,000,000 for federal fiscal year 2027 pending future appropriations.

State match funds and estimated repayments of principal, interest paid, and interest earned are also included in estimated funds available.

For the annual base cap grant, DEQ is required to provide a minimum of 20 percent state match to capitalize the fund.

For the IIJA supplemental cap grants, DEQ is required to provide 10 percent match for the first two years and 20 percent match for the following three years of IIJA funding over five years.

There is no match requirement for IIJA emerging contaminants cap grants.

DEQ disburses the required match to borrowers prior to disbursing capitalization grant funds. Once DEQ disburses all match and grant funds, DEQ disburses the state revolved funds (repaid or “recycled” funds) to borrowers.

DEQ raised match bonds in May 2021 to meet the match requirement for state fiscal years 2023, 2024 and 2025. DEQ raised a match bond for \$20 million in SFY2025 to meet the match requirement for state fiscal years 2026, 2027 and 2028. [Appendix 3](#) represents the estimated timing of the fund supply to the demand for funds. DEQ has the statutory and budgetary authority to raise sufficient match bonds to provide the required percent state contribution. DEQ will document the required match requirements prior to disbursing federal funds.

CWSRF Annual Base Capitalization Grant FFY2026

DEQ is applying for the CWSRF Annual Base Capitalization Grant in amount of \$8,068,000 allocated to the Oregon CWSRF for federal fiscal year 2026.

Infrastructure Investment and Jobs Act CWSRF Supplemental Capitalization Grant FFY2026

DEQ is applying for Infrastructure Investment and Jobs Act supplemental funds in the amount of \$27,829,000 allocated to the Oregon CWSRF for federal fiscal year 2026.

Infrastructure Investment and Jobs Act CWSRF Emerging Contaminants Capitalization Grant FFY2026

DEQ is also applying for IIJA Emerging Contaminants supplemental funds in the amount of \$2,402,000 allocated to the Oregon CWSRF for federal fiscal year 2026.

Investment earnings

The fund earns interest on cash deposited in the Oregon State Treasury, increasing funds available. DEQ forecasts investment earnings conservatively based on the market interest rates and the fund’s cash balance. The long-term goal is to keep cash reserves at a level where cash is available to cover future demand and the variability in project completion schedules, ensuring funds in active use by borrowers.

Repayments

Repayment revenues are a primary source of funds DEQ uses to finance projects. Repayment revenues are projected to grow and meet future demand, indicating that the fund is adequately revolving. Borrowers begin repayment six months to one year after project completion, based on an amortization schedule provided by DEQ.

[Appendix 3](#) includes projected repayments (principal and interest) based on existing loan agreements for state fiscal years 2026, 2027 and 2028 including:

- 1) Repayments on projects that are fully disbursed and already in repayment,
- 2) Repayments of interim loans with long-term financing through USDA, Rural Development, and
- 3) Repayments on signed agreements that are not fully disbursed yet but are expected to be in repayment before the end of state fiscal year 2028.

The estimates for 2) and 3) are less time certain due to several factors, including:

- Repayment schedules shift when projects are delayed or completed early,
- Receipt of early loan repayments, and
- Loan agreements for short-term projects go into repayment more quickly, increasing the repayments actually received.

The net effect of these factors in recent years resulted in an increase in actual repayments received over the amount projected. The projections in [Appendix 3](#) do not include repayments from future loan agreements not yet executed.

State fiscal years 2026 and 2027-28 are included in the projected repayments because borrowers typically request fund disbursements for approximately three years after loan execution. Future calculations of funds available may be adjusted as conditions warrant.

Administrative expenses

For state fiscal year 2027, DEQ will not utilize annual capitalization grant federal funds toward program administrative expenses. DEQ will cover administrative expenses from annual loan fees dedicated to support program administration and repayments as allowed by EPA.

Debt service on match bonds

When the State of Oregon issues bonds through DEQ to generate state match for the capitalization grant, the program pays debt service on those bonds using loan interest earnings exclusively. During state fiscal year 2027, the program will pay \$304,000 in debt service costs on bonds issued in previous years (2012). Because debt service reduces funds available for future years, DEQ routinely calls bonds when possible. While this reduces funds available in the short term, the program will realize a reduction of debt service in the long term. In 2025, DEQ raised a bond for \$20 million to cover state match for cap grants over the next 1 – 3 years.

Capitalization grant requirements

DEQ must comply with the annual EPA capitalization grant requirements to receive the federal funding allocation. The grant provides additional funding for Oregon's Clean Water State Revolving Fund loan program, increasing DEQ's capacity to fund water quality improvement projects. This Intended Use Plan includes funding from federal fiscal year 2026 CWSRF Annual Base capitalization grant, FFY 2026 Infrastructure Investment and Jobs Act supplemental

capitalization grant, and FFY 2026 IIJA emerging contaminants supplemental capitalization grant, subsidy requirements, required green project reserve and state match allocations.

FFY 2026 Annual Base Capitalization Grant Payment Schedule

EPA will provide DEQ the federal fiscal year 2026 annual base cap grant in the amount of \$8,068,000 and DEQ will demonstrate \$1,613,600 in state match.

Estimated federal fiscal year 2026 annual base capitalization grant payment schedules:

- FFY-2027/Q1 (10/1/26 to 12/31/26) \$4,000,000
- FFY-2027/Q2 (1/1/27-3/31/27) \$4,068,000
- FFY-2027/Q3 (4/1/27-6/30/27) \$0
- FFY-2026/Q3 (7/1/27-9/30/27) \$0

DEQ disburses 100 percent of the required state match prior to disbursing capitalization grant funds.

FFY 2026 Infrastructure Investment and Jobs Act Supplemental Capitalization Grant Payment Schedule

EPA will provide DEQ the federal fiscal year 2026 IIJA supplemental grant in the amount of \$27,829,000 and DEQ will demonstrate \$5,565,800 in state match.

Estimated federal fiscal year 2026 IIJA supplemental capitalization grant payment schedules:

- FFY-2027/Q1 (10/1/26 to 12/31/26) \$10,000,000
- FFY-2027/Q2 (1/1/27-3/31/27) \$17,829,000
- FFY-2027/Q3 (4/1/27-6/30/27) \$0
- FFY-2026/Q3 (7/1/27-9/30/27) \$0

DEQ disburses 100 percent of the required state match prior to disbursing capitalization grant funds.

FFY 2026 Infrastructure Investment and Jobs Act Emerging Contaminants Capitalization Grant Payment Schedule

EPA will provide DEQ the federal fiscal year 2026 IIJA emerging contaminants grant in the amount of \$2,402,000. There is no match requirement for this grant per EPA.

Estimated federal fiscal year 2026 IIJA emerging contaminants capitalization grant payment schedules:

- FFY-2027/Q1 (10/1/26 to 12/31/26) \$2,402,000
- FFY-2027/Q2 (1/1/27-3/31/27) \$0
- FFY-2027/Q3 (4/1/27-6/30/27) \$0
- FFY-2026/Q3 (7/1/27-9/30/27) \$0

Reporting requirements

Oregon CWSRF will report on each federal capitalization grant received including:

- Annual Base Capitalization Grant FFY 2026
- Infrastructure Investment and Jobs Act Supplemental Capitalization Grant FFY 2026
- Infrastructure Investment and Jobs Act Emerging Contaminants Capitalization Grant FFY 2026

Clean Water Benefits Reporting and Federal Funding Accountability and Transparency Act

DEQ reports project data, loan data and environmental benefits to EPA through the SRF data system. As a condition of the capitalization grant, DEQ reports data no later than the end of the fiscal quarter in which the loan, amendment or binding commitment is executed. Oregon CWSRF will utilize the EPA SRF Data System for reporting on annual base capitalization grant and IIJA supplemental capitalization grant funding as required.

Additionally, DEQ meets the Federal Funding Accountability and Transparency Act requirement by reporting loan award data for loans in an amount equal to the capitalization grant amount for the given state fiscal year. DEQ enters loan data into Sam.gov by the end of the month following the month in which the loan agreement was executed, in accordance with EPA guidance.

Green Project Reserve

The federal fiscal year 2026 allocations require DEQ to use at least 10 percent of the grant amounts for projects that qualify under [EPA's Green Project Reserve Guidance](#), to the extent that there are sufficient eligible projects. DEQ must allocate a minimum of \$3,829,900 to the green project reserve total.

- For the federal fiscal year 2026 annual base cap grant, DEQ must provide \$806,800 to the green project reserve.
- For the federal fiscal year 2026 IIJA supplemental cap grant, DEQ must provide \$2,782,900 to the green project reserve.
- For the federal fiscal year 2026 IIJA emerging contaminants grant, DEQ must provide \$240,200 for green projects.

DEQ expects to satisfy the federal fiscal year 2026 cap grant green project reserve requirements of \$3,829,900 total by executing loan agreements with at least one or more of the applicants that have project costs that meet the EPA green project reserve criteria. DEQ documents green project reserve eligibility for each project and reports the GPR amount in the EPA SRF Data System reporting database.

Principal forgiveness (additional subsidization)

Oregon Administrative Rule [340-054-0065\(12\)](#) allows the maximum percentage of additional subsidization permitted by the federal allocations of each capitalization grant to be allocated to eligible applicants as principal forgiveness. The amount of principal forgiveness DEQ allocates each year is dependent on the federal allocations and what DEQ forecasts the fund can afford while maintaining the fund's perpetuity.

The federal fiscal year 2026 base cap grant allocation requires states to offer a minimum of 20 percent of the capitalization grant amount as additional subsidization in the amount of \$1,613,600 EPA allows states the option to increase the amount of additional subsidization up

to a total maximum 40 percent of the annual base capitalization grant in the amount of \$3,227,200.

The federal fiscal year 2026 IIJA supplemental cap grant allocation requires states to offer 49 percent of the IIJA supplemental capitalization grant amount as additional subsidization in the amount of \$13,636,210.

The federal fiscal year 2026 IIJA emerging contaminants cap grant requires states to offer 100 percent of this cap grant as additional subsidization. DEQ will award the total amount of \$2,402,000 for CWSRF eligible projects that address emerging contaminants as principal forgiveness to meet this requirement for the emerging contaminants cap grant.

DEQ reserves 70 percent of the principal forgiveness allocation for applicants that meet DEQ's affordability criteria as a distressed community per Oregon Administrative Rule [340-054-0065\(12\)\(c\)\(A\)](#). DEQ reserves 30 percent of the annual principal forgiveness allocation for applicants with projects that meet DEQ's green/stormwater/sustainability criteria per Oregon Administrative Rule [340-054-0065\(12\)\(a\)\(B\)](#) for base and IIJA supplemental cap grants. Accordingly, for state fiscal year 2027, DEQ reserves a total of \$11,804,387 in principal forgiveness for applicants that meet the affordability criteria and \$5,059,023 in principal forgiveness for applicants with green/sustainability projects. DEQ will provide \$2,402,000 in principal forgiveness for eligible emerging contaminants projects.

DEQ will offer principal forgiveness to applicants that meet appropriate criteria when they are ready to proceed to executing a loan agreement. At the close of each federal fiscal year, DEQ may reallocate any un-awarded principal forgiveness to another reserve. If reserves still remain after the reallocation.

Annual DEQ funding allocations

Each year DEQ establishes a maximum loan amount available per project and sets aside certain amounts for the planning and small community reserves based on Oregon Administrative Rules.

Maximum loan amount

Oregon Administrative Rule [340-054-0036\(3\)\(b\)\(A\)](#) limits awarding no more than 15 percent of funds available in any given fiscal year to a single loan. For state fiscal year 2027, DEQ estimates a maximum loan amount of \$20 million.

When a borrower requests a loan amount that exceeds the maximum amount allowable for any single loan, DEQ will award the maximum annual loan amount allowed. DEQ may also allocate additional funds if funds are available after allocating the maximum amount to each public agency borrower who requested project funding in a state fiscal year. Loan increases for existing loans have first priority for new funding allocations if funds are available.

Planning reserve

The total planning reserve allocation cannot exceed \$3 million per Oregon Administrative Rule [340-054-0036\(1\)\(b\)](#). DEQ will fund planning loans through the planning reserve until the reserve is fully allocated. Planning loans that are not fully funded through the planning reserve may be funded with the general loan fund in rank order. During the final quarter of the state fiscal year, DEQ will allocate any remaining planning reserve funds to design and construction loans in rank order.

Small community reserve

The small community reserve is designated for municipalities with a population of 10,000 or less. The reserve cannot exceed 25 percent of the current funds available per Oregon Administrative Rule [340-054-0036\(1\)\(a\)](#). Loans to small communities that are not fully funded through the small community reserve may be funded with the general loan fund in rank order. During the final quarter of the state fiscal year, DEQ will allocate any remaining small community reserve funds to design and construction projects in priority order.

Timely use of funds

DEQ intends to use funds in a timely and expeditious manner. Appendix 4 calculates the amount of funds available in state fiscal year 2027 compared to the amount of binding commitments cumulative through June 30, 2026.

Oregon CWSRF Timely and Expeditious Use of Funds Plan SFY 2027

Timely and Expeditious Use of Funds Plan update

Last year, the Oregon CWSRF program included a plan to address Timely and Expeditious Use of Funds requirement per EPA in the IUP 2026 - Oregon CWSRF Plan and Measures to ensure compliance with Timely and Expeditious Use of Funds. Oregon CWSRF and EPA acknowledged the program experienced a decrease in loan activity the previous three years due to many factors including COVID pandemic, project delays due to increasing costs of materials and labor and program changes to address new requirements and priorities under the Infrastructure Investment and Jobs Act, including a rulemaking as documented in the IUP in 2022-23. These program changes were needed for IIJA implementation, which took time. This year is the fourth full year of implementing IIJA funds for the program received from EPA in September 2023. The program has had a significant increase in demand and loan activity and reduced funds available the past two years. Oregon CWSRF is meeting goals of timely and expeditious use of funds.

Increased principal forgiveness limits

The program increased principal forgiveness limits per loan from \$500,000 per loan to up to \$2 million per design/construction loan per borrower each state fiscal year. This helps ensure the program meets the IIJA requirement to provide 49 percent of each IIJA supplemental cap grant amount as additional subsidy. Most applicants eligible for principal forgiveness meet affordability criteria or green, stormwater, and sustainability project criteria, some meet ratepayer hardship criteria. The program is providing more principal forgiveness communities that meet affordability criteria metrics.

Affordability criteria

The program updated affordability criteria metrics, which include water pollution and health burdened metrics, and small and very small communities in addition to income, employment and population trend data. More public agency borrowers in Oregon are eligible for principal forgiveness based on new affordability criteria metrics. CWSRF is proactive about addressing affordability criteria metrics, which has been recognized by EPA as an example nationally and is leading to increased interest, demand, applications and loan activity. The program is updating affordability criteria to use the Oregon Distressed Areas Index starting October 1, 2026.

Principal forgiveness for planning loans

The program also introduced 100% forgivable planning loans up to \$100,000. The program adjusted rules to create this new incentive to further develop a pipeline of projects over the next five years. As a result, the program has received an unprecedented number of planning loan applications the past two years. Several of these applications are ready to proceed with loan commitments. Planning loans move faster from application to loan due to fewer requirements, which will help the program address timely and expeditious use of funds this year.

Outreach for project pipeline development

The program has also increased outreach and technical assistance to assist communities with CWSRF financing for water quality and infrastructure projects. The program created a Loan Information Request Form to connect with communities interested in CWSRF funding prior to submitting an application. CWSRF staff meet with communities that submit a LIRF to discuss projects, program and finance requirements. Most LIRFs lead to applications and most of the applications from LIRFs are for planning loans, which move quicker through the loan process than design and construction loans and will help timely and expeditious use of funds.

Technical assistance for loan readiness

This past year, the program continues to focus on technical assistance for loan readiness. The primary goal of CWSRF Technical Assistance for Loan Readiness is to provide assistance to communities on the IUP and help applicants move through the application and loan process more efficiently and effectively to loan commitment and meet timely and expeditious goals. Once on the IUP, program staff meets with applicants as “cohorts” to identify needs for assistance, provide customized training and technical assistance on loan requirements, required exhibits, documentation for financing, and specific needs identified. In SFY2025, DEQ also hired an additional Loan Specialist to increase program financing capacity.

Process enhancements and coordination

The program has started implementing a new software system, the Oregon Clean Water Funding Hub. The system will improve processes, efficiencies, internal controls and data management related to applications, projects and loans. The Oregon Clean Water Funding Hub will help streamline project and financing processes for borrowers and staff, improve data tracking and increase capabilities for reporting, all of which will help with timely and expeditious use of funds. DEQ is using the system to process disbursements and is developing standard operating procedures for using the system for applications, project tracking, and reporting.

Oregon CWSRF coordination with EPA on Timely and Expeditious Use of Funds

This past year, CWSRF met with EPA region 10 staff on a regular basis to address any issues regarding the IUP and Timely and Expeditious Use of Funds Plan. The program reviews status of loan activity at team meetings and tracks progress from application to loan commitments at least monthly. CWSRF staff will meet with EPA region 10 at least quarterly to review and discuss actions related to this plan including outreach, technical assistance for loan readiness, status of loan activity, guidance from EPA and any adjustments needed to address timely and expeditious use of funds. The program will also ensure that loan data is entered in the EPA SRF data system at least quarterly and end of year.

These program enhancements, incentives and focus on timely and expeditious use of funds will continue to result in greater demand and more loan activity for projects in Oregon.

Table 4 - Oregon CWSRF Timely and Expeditious Use of Funds Action Plan SFY 2027

Action Category	Specific Actions	Timeframe	Notes
Infrastructure Investment and Jobs Act Implementation	Continue implementing new requirements and priorities under IIJA including principal forgiveness, technical assistance, Build America Buy America and emerging contaminants.	Application review and scoring, IUP updates, loan commitments, principal forgiveness awards, project implementation with requirements April 2026 and October 2026.	DEQ has developed guidance on new principal forgiveness limits, affordability criteria metrics, BABA guidance, and guidance on emerging contaminants for implementation of IIJA funds.
Outreach and Project Pipeline Development	Loan Information Request Form meetings, One Stop meetings, conferences, trainings and events	LIRF meetings as requested (ongoing) One Stop Meetings (monthly or as scheduled) Oregon Association of Clean Water Agencies Committee meetings and Annual Conference 2026 Oregon Infrastructure Summit 2026 League of Oregon Cities Annual Conference 2026	Loan Information Request Form meetings are leading to more applications, which is expected to continue. DEQ continues to develop a project pipeline for future federal funding.
Technical Assistance for Loan Readiness	Individual and group meetings and trainings with applicants on IUP to assist with requirements and move to loan commitments. DEQ CWSRF will dedicate existing staff and intends to hire limited duration staff to provide support to applicants/borrowers for timely and expeditious use of funds as a priority.	Continue meetings and webinars with applicants from April 2026 – April 2027 application rounds to provide guidance on program requirements and address specific needs for technical assistance. Meet with applicants to assess loan readiness and	DEQ will initiate meetings to assist applicants with loan readiness from April 2026 round through SFY 2027. Specific topics may include loan requirements, environmental review, and others to be addressed depending on needs.

Action Category	Specific Actions	Timeframe	Notes
		identify TA needs for applicants added to the IUP from April 2026 through April 2027 application rounds.	
Process Enhancements and Coordination – CWSRF Clean Water Funding Hub	Continue using Clean Water Funding Hub for disbursements. Continue developing standard operating procedures for processing applications Implement Oregon Clean Water Funding Hub with new applicants. Utilize the Hub for reporting during the next year.	July 2026 – June 2027	Oregon CWSRF is phasing in elements of the software system and will identify users for applications and loan processing in SFY2027. The system will help timely and expeditious use of funds by centralizing data, improve project and finance processes and track progress with loan commitments and disbursements.
Oregon CWSRF Coordination with EPA on Timely and Expeditious Use of Funds	Internal team meetings regarding loan status and progress at least monthly. Meetings with EPA for updates, status and progress with T and E plan at least quarterly	DEQ internal team meetings at least monthly Meetings with EPA at least quarterly	Oregon CWSRF will meet with EPA region 10 for program coordination monthly (scheduled)

Equivalency requirements

Each fiscal year, DEQ identifies loans equal to the amount of the capitalization grant to meet federal equivalency reporting requirements. The requirements include meeting economic, social and environmental cross-cutting federal laws and Executive orders; conducting a Single Audit; and meeting architectural and engineering procurement regulations per 40 USC Chapter 11. Oregon CWSRF intends to use City of Redmond loan R76064 and City of Estacada loan R31741 to meet equivalency requirements for federal cap grants in SFY2026 will identify additional loans for equivalency in SFY2027 to meet future cap grant requirements.

Build America Buy America requirements

The Infrastructure Investment and Jobs Act created the Build America, Buy America (BABA) Act domestic sourcing requirements for Federal financial assistance programs for infrastructure, including the SRF programs. Per EPA guidance, the CWSRF program is required to apply BABA requirements to equivalency projects (see above). The Build America, Buy America Act

State of Oregon Department of Environmental Quality

Implementation Procedures for EPA Office of Water Federal Financial Assistance Programs memorandum November 2022 references OMB Guidance M-22-11 addresses cases with project co-funding from separate programs. The memo states EPA would apply the guidance's "cognizant" program determination to projects that are co-funded with different general applicability/programmatic waivers. CWSRF will identify equivalency projects in the amounts equal to each of the capitalization grants and apply BABA requirements to these projects. The program will follow OMB and EPA guidance on waivers and co-funded projects.

Environmental review and compliance with federal cross-cutters

EPA approved DEQ's current state environmental review process in February 2008. All projects deemed treatment works by DEQ are required to undergo environmental review.

At a minimum, projects funded to an equal amount of EPA's capitalization grants must comply with the federal cross-cutting authorities, including the environmental cross-cutter laws. DEQ ensures that all equivalency projects will comply with federal cross-cutters.

This year, DEQ CWSRF staff will continue coordinating closely with EPA staff regarding environmental review and consultation with federal agencies as appropriate.

DEQ is updating the State Environmental Review Process (SERP) guide this year.

Operating agreement

The Clean Water State Revolving Fund operating agreement between the EPA Region 10 and the DEQ includes procedures, assurances, certifications, applicable federal authorities and laws and other documentation required by EPA and is referenced here to demonstrate that DEQ meets the requirements.

Single audit act

Borrowers who have received federal funds from the annual capitalization grant may be subject to the requirements of the Single Audit Act and 2 CFR 200 (Omni Circular). DEQ monitors borrowers' compliance with those requirements for loans in an amount equal to the capitalization grants.

Public involvement

The Clean Water State Revolving Fund program provides several opportunities for public involvement. These include DEQ's rulemaking process, public notice of environmental determinations and public notice of this Intended Use Plan.

Rulemaking

The program's administrative rules are revised to address changes in federal requirements or to better meet the financial needs of communities. The rulemaking process includes input from a public advisory committee, public hearings and public comment periods. The public is also

encouraged to provide comments directly to the [Environmental Quality Commission](#) on administrative rule changes.

Advisory committee

DEQ involves public advisory committees to assist the agency in developing policy. DEQ appoints an advisory committee to advise on program issues and provide input on rulemaking. The committee includes members representing statewide organizations with an interest in financing water quality improvement projects. Committee representation includes local, state federal and tribal agencies, water and wastewater utilities, organizations serving low income, rural, and farmworker populations, environmental advocacy organizations and statewide associations. Committee meetings are open to the public.

Public notice of an environmental determination

The public may request information and comment on the environmental determination for projects funded by the Clean Water State Revolving Fund during the public notice period, which is generally 30 days. DEQ currently issues a public notice on the DEQ public notice website for each project subject to environmental review.

Notice and comments on the Intended Use Plan

To notify the public about this Intended Use Plan, DEQ posts the Intended Use Plan on the program's website page for the [Intended Use Plan](#). DEQ issues a public notice in the Daily Journal of Commerce. The notice process includes a 14-day public comment period. Upon the completion of the public comment period, DEQ considers all comments and then finalizes the Intended Use Plan. The current Intended Use Plan is always available on the program's website page for the [Intended Use Plan](#).

Public notice

This Proposed Intended Use Plan State Fiscal Year 2027, Second Edition, will be noticed for 14 days in the Daily Journal of Commerce.

Public Notice

Oregon DEQ Clean Water State Revolving Fund

Proposed Intended Use Plan State Fiscal Year 2027, Second Edition

Notice Issued: July 29, 2026

Comments Due August 12, 2026

What is proposed?

The Oregon Department of Environmental Quality has prepared a *Proposed Intended Use Plan State Fiscal Year 2027, Second Edition* for the Clean Water State Revolving Fund Program in accordance with procedures set forth in Oregon Administrative Rules, chapter 340, division 54. After the close of the public comment period, DEQ will address any comments received and finalize the plan.

Description of proposed Intended Use Plan

The *Proposed Intended Use Plan State Fiscal Year 2027, Second Edition* includes 80 applications on the Project Priority list for a total of \$443,711,262 in requested funding for planning, design and construction of water quality improvement projects in Oregon.

To receive a copy of the proposed Intended Use Plan:

The *Proposed Intended Use Plan, State Fiscal Year 2027, Second Edition* and the option to sign up for notifications through GovDelivery are available on DEQ's Clean Water State Revolving Fund [Intended Use Plan web page](#).

Comments on this plan must be submitted in writing via mail, fax or email any time prior to the comment deadline of August 11, 2026, at 5 p.m. to:

Mail:

Oregon Department of Environmental Quality, Water Quality Division

Attn: Chris Marko

700 NE Multnomah Street, Suite 600

Portland, OR 97232

Email: intendeduseplancomments@deq.state.or.us

In addition to the above notice, DEQ sent email notification of this proposed plan to the new loan applicants for this funding cycle and to:

Casey Hagan

U.S. Environmental Protection Agency

Binding Commitments as a Percentage of Funds Through 6/30/2027 = **104.53%**

Appendix 5: Project scoring criteria

Internal CWSRF Procedures for Scoring Criteria for Non-planning loans for scoring as of April 2023 are as follows:

Category one: Water quality standards and public health considerations

- 1a. Does project improve water quality by addressing water quality parameters including, but not limited to, the following: temperature, dissolved oxygen, contaminated sediments, toxic substances, bacteria or nutrients?
- 1b. Does project ensure that a facility currently in compliance, but at risk of noncompliance, maintains compliance?
- 1c. Does project address noncompliance with water quality standards, public health issues or effluent limits related to surface waters, biosolids, water reuse or groundwater?
- 1d. If project is not implemented, is a water quality standard likely to be exceeded or an existing exceedance likely to worsen?

Category two: Watershed health benefits

- 2a. Does project improve or sustain aquatic habitat supporting native species or state or federally threatened or endangered species?
- 2b. Does project address water quality or public health issue within a federally designated wild and scenic river or sole source aquifer, state designated scenic waterway, the Lower Columbia River or Tillamook Bay estuary, a river designated under OAR 340-041-0350, or a significant wetland and riparian area identified and listed by a local government?
- 2c. Does project support implementation of a total maximum daily load (TMDL) allocation, a department water quality status and action plan or designated groundwater management area declared under ORS 468B.180?
- 2d. Does project provide performance-based water quality improvements supported by monitoring and reasonable assurance that the project will continue to function over time?
- 2e. Does project integrate or expand sustainability or the use of natural infrastructure, or use approaches including, but not limited to, water quality trading, that are not specified in subsections (f) through (i) of this section of the rule?
- 2f. Does project incorporate or expand green stormwater infrastructure including, but not limited to, practices that manage wet weather and that maintain and restore natural hydrology by infiltrating, evapotranspiring, harvesting or using stormwater on a local or regional scale?
- 2g. Does project incorporate or expand water efficiency including, but not limited to, the use improved technologies and practices to deliver equal or better services with less water such as conservation, reuse efforts or water loss reduction and prevention?

- 2h. Does project incorporate or expand energy efficiency including, but not limited to, the use of improved technologies and practices to reduce the energy consumption of water quality projects, use energy in a more efficient way, or to produce or utilize renewable energy?
- 2i. Does project incorporate or expand environmentally innovative projects including, but not limited to, demonstrating new or innovative approaches to deliver services or manage water resources in a more sustainable way?

Category three: Other considerations

- 3a. Does project include a long-term planning effort that addresses financial, managerial or technical capability, or asset planning that ensures project will be maintained?
- 3b. Does project include a significant on-going education or outreach component?
- 3c. Does the project incorporate other resources including, but not limited to, in-kind support, other funding sources or a partnership with a governmental, tribal or non-governmental organization?
- 3d. Does project address a water quality improvement or restoration need for a small community?
- 3e. Does project include a sponsorship option?

Internal CWSRF procedures for scoring criteria for planning loans are as follows:

- 1 - Will the scope of the planning effort include more than one water quality benefit, pollutant or restoration effort?
- 2 - Will the scope of the planning effort include sustainability?
- 3 - Will the scope of the planning effort take advantage of an opportunity with respect to timing, finances, partnership or other advantageous opportunity?
- 4 - Will the scope of the planning effort include financial, managerial or technical capability aspects of the project?
- 5 - Will the scope of the planning effort include integrating natural infrastructure and built systems?
- 6 - Will the scope of the planning effort demonstrate applicant cost effectiveness by considering three or more project alternatives such as optimizing an existing facility, regional partnership or consolidation?

Appendix 6: Principal forgiveness eligibility criteria and limits

Principal forgiveness eligibility criteria requirements

The Clean Water Act Section 603(i) states that additional subsidization must be provided to eligible CWSRF assistance recipients or project types as described in section 603(i):

- to benefit a municipality that meets the state's affordability criteria as established under the CWA section 603(i)(2);
- to any eligible recipient to implement a process, material, technique, or technology that addresses water or energy efficiency goals; mitigates stormwater runoff; or encourages sustainable project planning, design, and construction;
- to benefit a municipality that does not meet the state's affordability criteria but seeks additional subsidization to benefit individual ratepayers in the residential user rate class;

Oregon Administrative Rule 340-054-0065 identifies eligibilities for principal forgiveness consistent with requirements under the federal Clean Water Act Section 603(i)(2) including:

- Affordability criteria consistent with requirements under the Clean Water Act including:
 - Income
 - Unemployment
 - Population trends
 - Other data determined relevant by the State
- Water efficiency, energy efficiency, stormwater, and sustainable project planning, design, and construction
- Ratepayer hardship program

Oregon CWSRF principal forgiveness eligibility criteria and limits

Oregon CWSRF Program principal forgiveness eligibility criteria and limits for all loans, including new and amended loans, effective October 1, 2026, are as follows:

1) **Affordability criteria and domestic wastewater projects**

- The Oregon CWSRF program will use the **Oregon Distressed Areas Index** as affordability criteria, which meets requirements under the Clean Water Act and Oregon Administrative Rule. The index identifies cities and counties considered "economically distressed" in Oregon. [Business Oregon : Distressed Areas in Oregon : Reports, Publications, and Plans : State of Oregon](#).
- The program has added a priority for "**domestic wastewater projects**" (wastewater treatment projects primarily serving residents of a community) for borrowers that meet affordability criteria. *Borrowers that meet affordability criteria must also implement a domestic wastewater project to potentially be awarded principal forgiveness under this criteria.*

- The program has added **federally recognized Tribes** and **population (very small community up to 2,500, small community 2,501 – 10,000)** as priorities for the affordability criteria/domestic wastewater category with maximum limits for principal forgiveness as follows:
 - **Federally recognized Tribes and very small communities up to 2,500 population** that meet affordability criteria with domestic wastewater projects may potentially be awarded a maximum up to **\$500,000** of principal forgiveness for design/construction loans.
 - **Small communities 2,501 – 10,000 population** that meet affordability criteria with domestic wastewater projects may potentially be awarded up to a maximum **\$250,000** of principal forgiveness for design/construction loans.
 - **Communities with a population above 10,000** are not eligible for principal forgiveness under the affordability criteria/domestic wastewater category. Tribes, very small, and small communities are priority.

2) Green, stormwater, and sustainability projects

- **Federally recognized Tribes, very small communities with population up to 2,500, and small communities with population 2,501 – 10,000** may potentially be awarded up to a maximum **\$250,000** of principal forgiveness for a design/construction loan for a project that meets **green, stormwater, or sustainability criteria**.
- **Communities with a population above 10,000** may potentially be awarded up to a maximum **\$50,000** of principal forgiveness for a design/construction loan for a **green, stormwater, or sustainability project and the borrower must also meet affordability criteria**.

3) Ratepayer hardship

- The borrower must have a ratepayer hardship program and demonstrate how the ratepayer hardship program and project benefits ratepayers with economic hardship.
- A community does not need to meet both affordability criteria and ratepayer hardship to be eligible under the ratepayer hardship category.
 - A borrower of **any population** may potentially be awarded up to a maximum **\$50,000** of principal forgiveness under rate payer hardship.

Planning loans

Planning loans are eligible for principal forgiveness if the borrower meets **at least one of the three primary principal forgiveness criteria** above (affordability criteria with domestic wastewater project; green, stormwater, sustainability project; or ratepayer hardship).

- **Tribes, very small communities, and small communities** may potentially be awarded **100 percent up to a maximum \$100,000** of principal forgiveness or **planning loans**.
- Communities with a **population of more than 10,000** may potentially be awarded **100 percent up to a maximum \$50,000** of principal forgiveness for **planning loans**.

Principal forgiveness limits per borrower and project

Design/Construction loans: Borrowers that are eligible recipients of principal forgiveness may receive additional subsidization for up to 50% percent of their loan but not to exceed \$500,000 for design and/or construction loans. Borrowers may be awarded principal forgiveness up to the maximum of \$500,000 or 50% of the loan amount, whichever is less, per project for the life of the loan. If the design and construction loans are executed separately for the same project, it is not possible to exceed the \$500,000 limit per project. This does not include subsidization awarded for emerging contaminants which may exceed the \$500,000 max.*

The maximum subsidization that a borrower can receive per state fiscal year is \$500,000.

Additional subsidization is subject to availability of funds. Borrowers eligible for principal forgiveness can only be awarded a maximum amount of \$500,000 in additional subsidization per state fiscal year, regardless of the number of active loans or projects the borrower has with the program. This includes additional subsidization awarded to all loan types (planning loans, design only loans, construction only loans and design and construction loans).

Planning Loans: Borrowers that are eligible recipients for principal forgiveness under one of the three primary criteria (affordability criteria/domestic wastewater; green, stormwater, sustainability; ratepayer hardship) may be awarded 100 percent principal forgiveness, but not to exceed \$100,000, for planning loans. A borrower may receive only one 100 percent forgivable loan up to \$100,000 for a planning loan per state fiscal year.

Table 12 – Loan types, maximum principal forgiveness per fiscal year, and number of loans

Loan Type	Maximum PF per fiscal year	Number of Loans
Planning	100% of the amount, up to \$100,000	A borrower can only receive one 100% forgivable loan per State Fiscal Year. No limit on number of loans per State Fiscal Year.
Design, Construction, Design and Construction	50% of the loan amount, but to not exceed \$500,000, whichever is less per project and state fiscal year	No limit on number of loans per State Fiscal Year.
Emerging Contaminants*	Up to 100% principal forgiveness per loan for any CWSRF eligible project	A borrower can only receive one 100% forgivable loan per State Fiscal Year.

Infrastructure Investment and Jobs Act CWSRF funding to address emerging contaminants

*The Infrastructure Investment and Jobs Act includes provisions for supplemental federal capitalization funding for CWSRFs to address emerging contaminants under the Clean Water

Act. The EPA IJA implementation guidance memo regarding EC provisions for CWSRFs states “funds provided under this paragraph in this Act deposited into the state revolving fund shall be provided to eligible recipients as assistance agreements with 100 percent principal forgiveness or as grants (or a combination of these)”. This language requires states to provide 100% of the capitalization grant amount as additional subsidization in the form of principal forgiveness and/or grants. Additional subsidization may be provided to any eligible CWSRF assistance recipient for any project eligible under section 603(c) of the CWA that addresses emerging contaminants. Oregon CWSRF may offer up to 100% principal forgiveness for any CWSRF eligible project to address emerging contaminants per EPA. A project that is eligible for principal forgiveness under other eligibilities may receive an additional award of principal forgiveness related to funding for emerging contaminants. A project funded to address emerging contaminants may receive an additional award of principal forgiveness above the maximum limit of \$500,000. Emerging contaminants funding is expected to be allocated for projects addressing emerging contaminants by June 30, 2028, and may be disbursed on loans until June 30, 2029.
