Use DEQ's interactive map <https://geo.maps.arcgis.com/apps/webappviewer/index.html?id=47585212e4144417b9570edb245dc166> to provide the following information. In the space below identify each gate/control structure nearest to natural water and points of connection to natural water and provide its location using latitude and longitude. Identify a BLM copper region as Cascade, Columbia River, Coastal, Eastern or Willamette Valley. Attach additional pages if necessary.

Provide a Latitude and Longitude to identify gate/control structure and points of connection nearest to natural water.

- Zoom in to get close up view of the area
- Use the point of the cursor to select a location
- Record Latitude (left number) and Longitude (right number) to 6 decimal places

Important: Latitude and Longitude will change as the cursor moves unless the cursor is anchored. To anchor the cursor, first click on **the button** (see picture on the left), then move the cursor to a location on the stream and click on that location. A **green flag** will appear when cursor is anchored. The Latitude and Longitude on the lower left side of the screen is the Latitude Longitude at the point where **green flag** is placed. **The button** can be used to anchor (first click), as well as release (second click) the cursor.

The picture on the left shows Latitude and Longitude for the location at the green flag (Lat 42.525916; Long -124.254686). This mapping tool provides decimal degrees to six (6) decimal places in World Geodetic System 1984 or WGS84 (standard coordinate system for hand-held GPS units and Internet map tools).
