## Oregon Child Care Market Price Study, 2012

### Executive Summary

Starting with the Family Support Act of 1988, “federal funding requirements have stipulated that child care subsidy rates be informed by market rates.” In 1990 the federal government began a major investment in child care with the passage of the Child Care and Development Block Grant Act. Support of parental choice was a key component of this block grant program that sent new money to states to support child care. Parental choice and state control of policy remained central when the program was expanded in 1996 as a part of welfare reform legislation. At that time, child care funding became known as the Child Care and Development Fund (CCDF).

The present federal regulatory framework for market rate surveys was made public in the *Federal Register* in August 1998 (45 CFR Parts 98 and 99). As part of this rule, states are required to conduct a child care market rate survey within two years of the effective date of their currently approved CCDF plan. Although these surveys are described as market *rate* surveys by the federal government, we use the term market *price* survey because the title clearly distinguishes the process of collecting price data from setting maximum rates.

The purpose of federal policy in having states conduct a market price survey is to have states establish maximum child care payment rates high enough to enable subsidy families to enter the child care market in a competitive position to find and afford care. A market price survey is a tool to be used by states to collect up-to-date information on what facilities, within given geographic areas, charge parents for various types of child care. This information is then considered during the state budget process when establishing state subsidy rate policies for facilities who serve CCDF eligible families. It should be noted that the federal CCDF Final Rule is for a survey of the prices charged for child care, not a survey of the costs of child care.

#### **Purpose of the Market Price Study**

The 2012 Oregon Market Price Study identifies child care prices and the geographic distribution of these prices across the state. Prices vary by several factors including the age of the child served, type of care (family child care, center, certified family care), the local supply and demand for child care, and facilities’ perceptions of the capacity of families to pay for care.

The 2012 Oregon Market Price Study examines geographic patterns in the prices charged by facilities by age of child served, type of care, and pricing modes (hourly, monthly, etc). This study fulfills the federal requirement that the state complete a market price survey every two years.

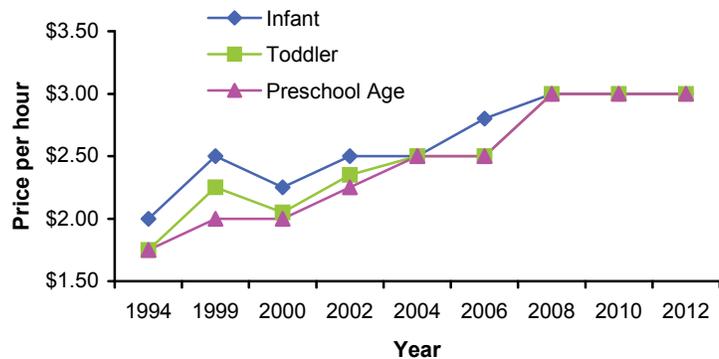

#### **Data Source**

Prior studies were completed in 1990, 1992, 1994, 1999, 2000, 2002, 2004, 2006, 2008 and 2010. As in past years, data collected through the local Child Care Resource and Referral (CCR&R) was used as the source of data. The data were created when local CCR&Rs collect price data from enrolled child care facilities for the price study. CCR&Rs also use price data to inform parents of facility charges as part of a referral process. The Oregon Child Care Resource and Referral Network (OCCRRN) compiles the data into a single database. In 1999, a sample of facilities were pulled from the OCCRRN database and surveyed by phone. In 2012 (as in years other than 1999) the price data from the OCCRRN database were analyzed. Prices charged by 3,511 family child care facilities, 861 centers, and 552 certified family facilities from every part of the state are included in the database.

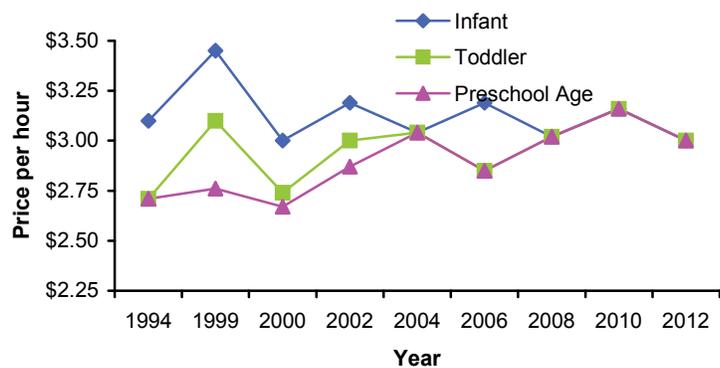

**Findings**

***Between 1994 and 2012 statewide prices increased for most ages and types of care.*** In family child care the hourly price of toddler care increased 71% since 1994 while in center care the monthly price increased 99% in the same time period. Trends in child care prices are graphed below. Also graphed are the same trends in prices, but adjusted for inflation (second graph for each type of care). The family care graph shows no consistent pattern in prices after taking into consideration cost of inflation up through 2012, and actually shows a price decline from 2010 to 2012 when adjusted for inflation. For center care, however, prices increased faster than inflation between 1999 and 2004, for the most part have kept pace with inflation from 2004 through 2008, and have increased faster than inflation since 2008.

**Trends in Family Child Care Prices (75<sup>th</sup> percentile)**

**Trends in Family Child Care Prices (75<sup>th</sup> percentile)  
Adjusted for Inflation (all prices in 2012 dollars)**

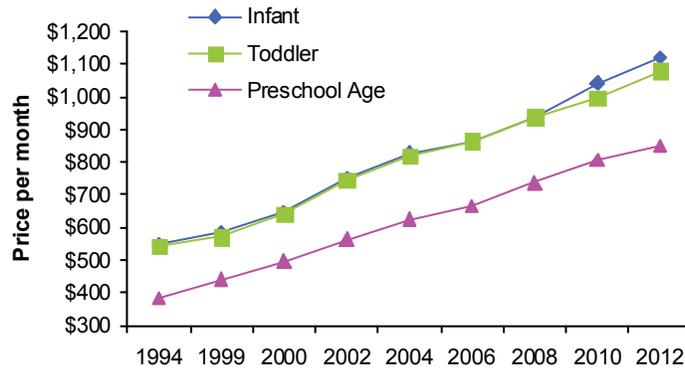

**Sources:** Market Price Surveys 1994, 1999, 2000, 2002, 2004, 2006, 2008, 2010, 2012

**Note:** See Table 10 of the full report for prices found in the graphs.

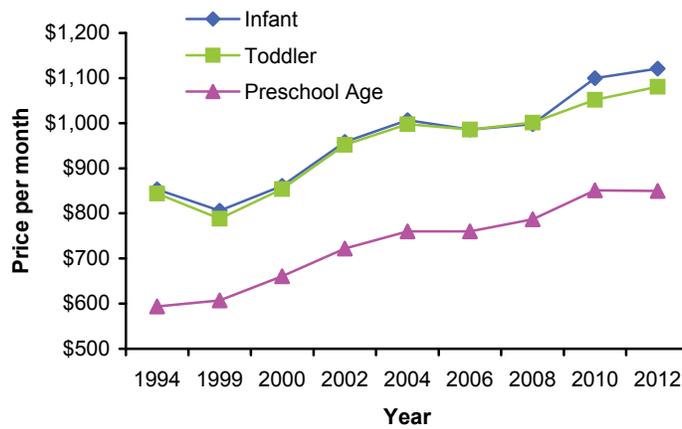

**Note:** The majority of family child care facilities charge by the hour.

**Findings  
(continued)**

**Trends in Center Child Care Prices (75<sup>th</sup> percentile)**

**Trends in Center Child Care Prices (75<sup>th</sup> percentile)  
Adjusted for Inflation (all prices in 2012 dollars)**

**Sources:** Market Price Surveys 1994, 1999, 2000, 2002, 2004, 2006, 2008, 2010, 2012

**Note:** See Table 10 of the full report for prices found in the graphs.

**Note:** The majority of centers charge by the month.

***Child care markets are local with variation among communities.*** When prices were analyzed by zip codes across Oregon, patterns around the state appeared. Urban areas and university communities have higher prices than do more rural communities in the state. Some zip code areas have moved up or down in child care prices over time. As in past studies, however, child care prices fall into three clusters or areas. The map of 2012 Rate Areas graphically depicts how the prices vary across the state (See Map in Appendix E). These three rate areas capture three distinct sets of prices regardless of type of care or age of child served.

**Findings  
(continued)**

*The percent of slots that can be purchased with the value of DHS payment rates decreased from 64% to 58% between 2010 and 2012.* The primary explanation for this decrease is an increase in market prices as licensed rate maximums have remained at the 75th percentile of 2006 market prices for most licensed facilities. As authorized by the Oregon Legislature, DHS increased maximum subsidy rates to the 75<sup>th</sup> percentile of 2006 prices for most licensed facilities and authorized a copay reduction of 24% for parents as of October 2007.

The state subsidy or maximum payment rate affects parents’ access to all types of child care in the community. The study explored access in two ways: (1) percent of slots statewide that can be purchased at the subsidy rate, and (2) percent of facility care by zip code that can be purchased at the subsidy rate. The second measure was created to determine if the amount of access varied by geographic location. Findings include:

- In Oregon, current licensed rate maximums are adequate to purchase approximately 58% of child care toddler slots statewide (see Table below). This was down 6% from the 2010 market price study, but significantly greater than years prior to 2008.
- In much of Oregon now, current licensed rate maximums are adequate to purchase a larger percentage of market child care (see Table on p. V).

**% of child care toddler slots that can be purchased at the licensed rate maximums**

	2000	2002	2004	2006	2008	2010	2012
<i>Full-time, Toddler, Family, Center, and Certified Family Care</i>	<b>38%</b>	<b>24%</b>	<b>21%</b>	<b>26%</b>	<b>68%</b>	<b>64%</b>	<b>58%</b>

Findings on access by geographic location are shown in the Table on p. V and in the two maps at the end of the executive summary titled:

- “Percent of Child Care Facilities Whose Price is Less Than or Equal to the DHS Licensed Rate Maximums, Family Care for Toddlers, by Zip Code”
- “Percent of Child Care Facilities Whose Price is Less Than or Equal to the DHS Licensed Rate Maximums, Center Care for Toddlers, by Zip Code”

In 20% of family and 28% of center zip code areas that have prices, the DHS licensed rate maximums are not adequate to purchase any market child care. In 53% of zip code areas families can purchase over 50% of family child care in the community at the licensed rate maximums, and in 47% of zip code areas families can purchase over 50% of center child care.

**Percent of Child Care Facilities Whose Price is Less Than  
or Equal to the DHS Licensed Rate Maximums**

	Family Care		Center Care	
	Number of Zip Codes	Percent of Zip Codes	Number of Zip Codes	Percent of Zip Codes
0%	46	20%	35	28%
1% to 25%	10	4%	7	6%
26% to 50%	53	23%	24	19%
51% to 75%	61	26%	14	11%
Greater than 75%	62	27%	44	36%

**Note:** The number of zip codes for center care is lower than family care because a larger number of zip code areas have family child care facilities than have centers.

The DHS licensed rate maximums include both the amount families' pay in copay and the DHS child care subsidy amount. As the following maps show, the value of a child care subsidy, when combined with the family copay, does cover child care prices in the market in most parts of the state. Deeper colors designate geographic areas in which the subsidy value is enough to cover the prices of few, if any, community child care facilities. Examination of the maps indicates that this is a statewide phenomenon rather than one limited to urban areas.

## Conclusions

*The geographic price analysis identified three geographic market area boundaries that are generally similar to those identified in the previous market price studies.*

*DHS licensed rate maximums are adequate to purchase over half (58%) of market child care slots statewide. In 20% of family and 28% of center zip code areas that have prices, the DHS licensed rate maximums are not adequate to purchase any market child care.*

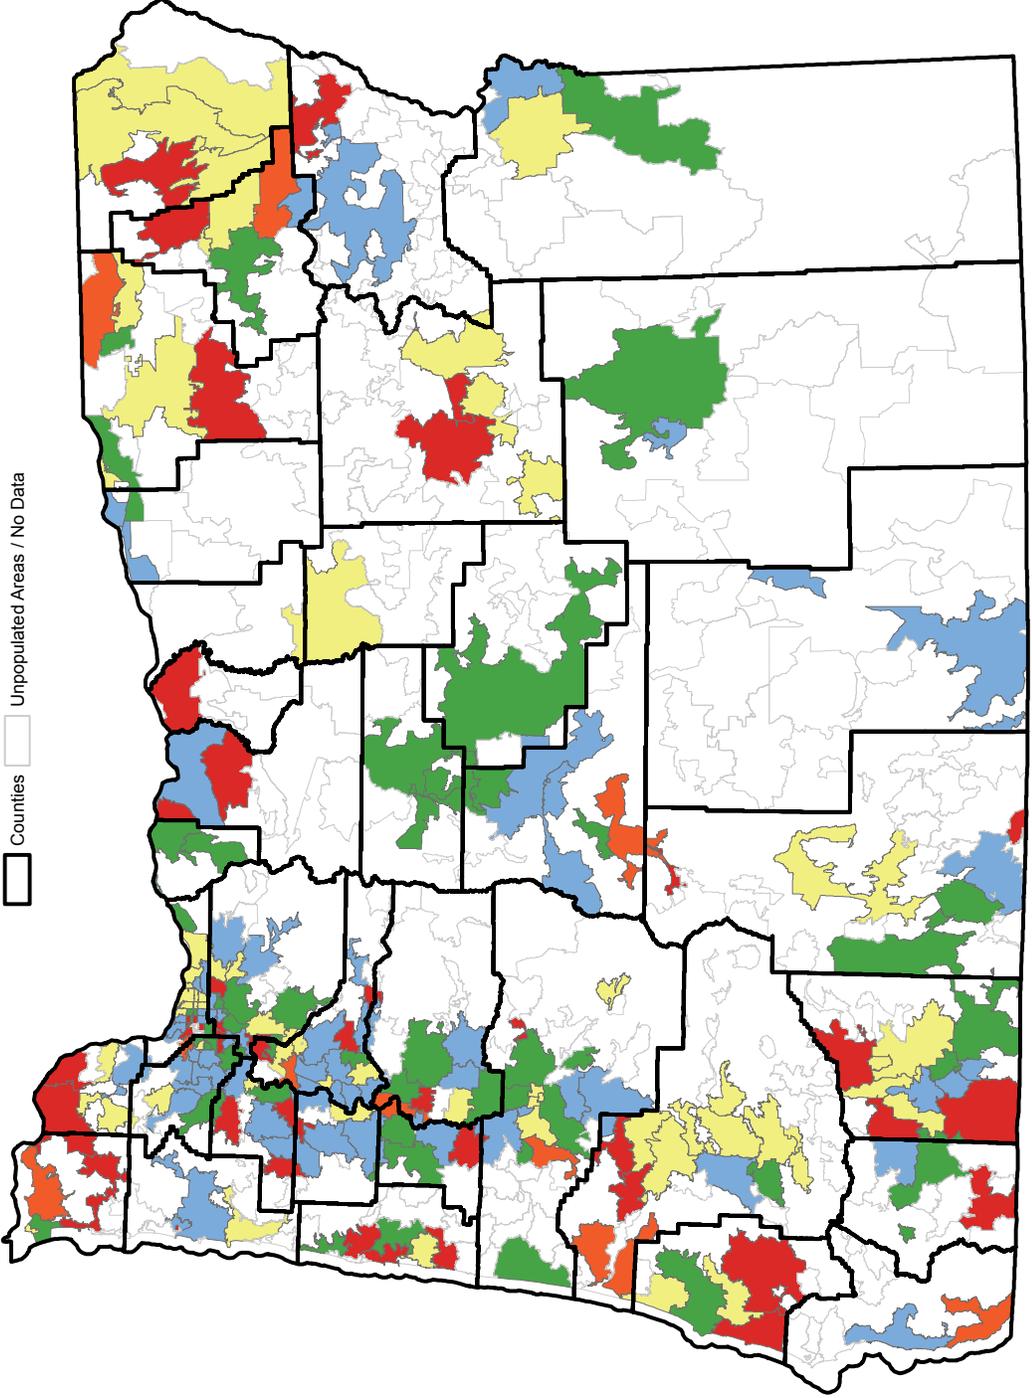

*CCR&R data continues to provide a reliable and cost-effective source of data for statewide market price studies.*

*Prices should continue to be reported for both child care facilities and slots. Analysis should be based on slots since this most accurately represents what families experience when purchasing care.*

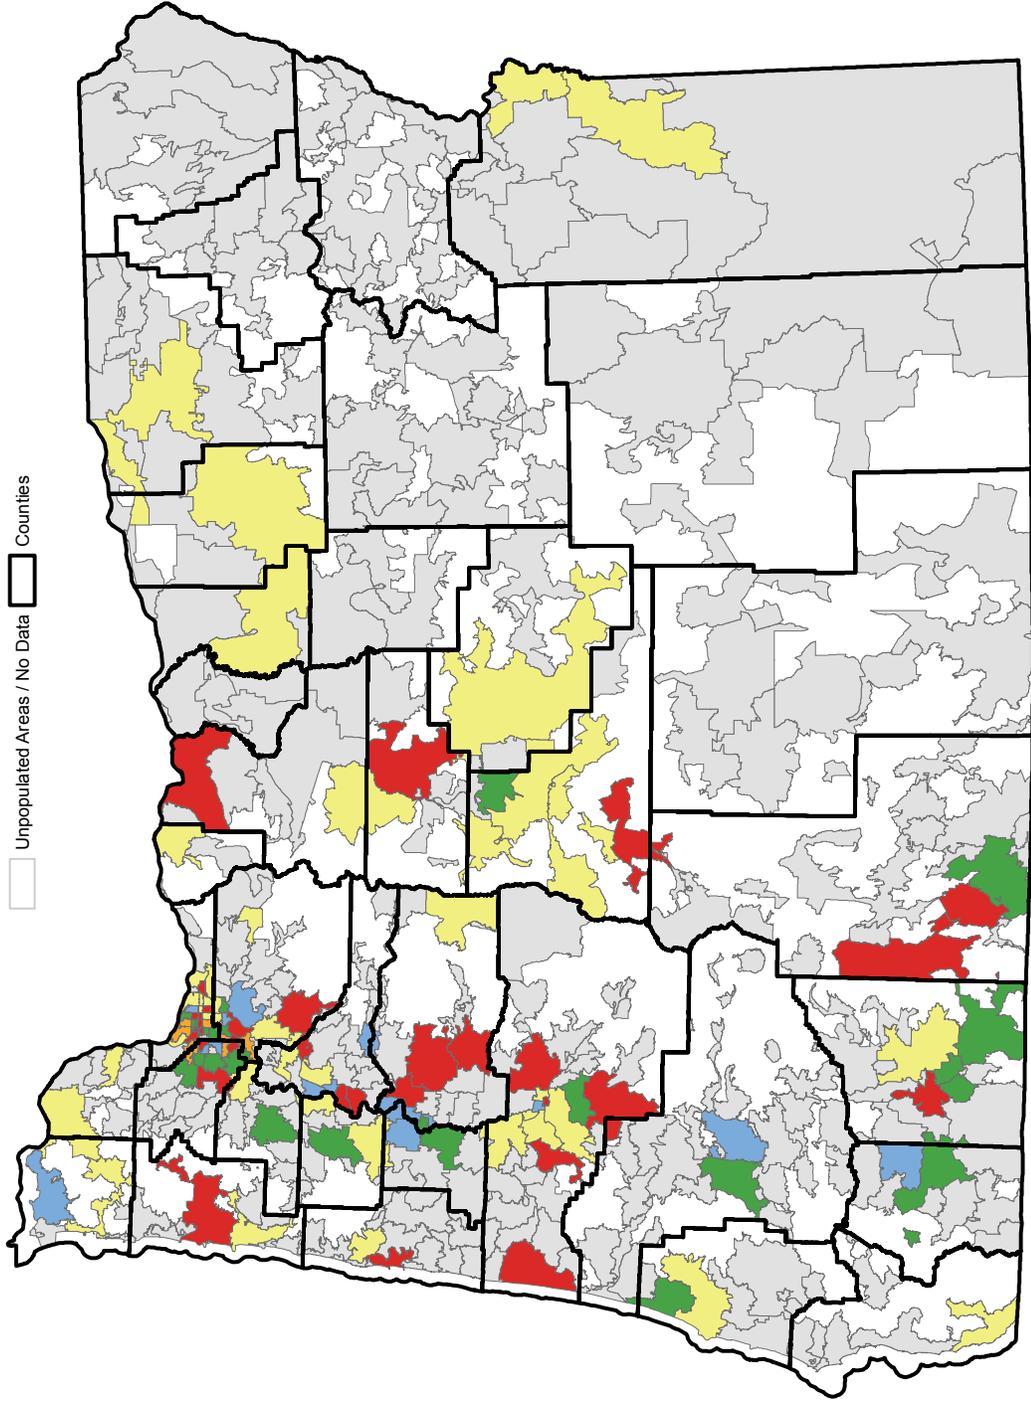

*CCR&Rs should continue to collect price information in the mode(s) that reflect how facilities charge.*

**Percentage** ■ 0% ■ 0.1% to 25.0% ■ 25.1% to 50.0% ■ 50.1% to 75.0% ■ >75% ■ No providers identified for this type of care  
□ Counties □ Unpopulated Areas / No Data

### Percent of Child Care Facilities Whose Price is Less Than or Equal to the DHS Licensed Rate Maximums, Center Care for Toddlers, by Zip Code

## Introduction

Starting with the Family Support Act of 1988, federal funding requirements have stipulated that child care subsidy rates be informed by market rates.<sup>i</sup> In 1990 the federal government began a major investment in child care with the passage of the Child Care and Development Block Grant Act of 1990 (42 U.S.C. 9858 et seq). Support of parental choice was a key component of this block grant program that sent new money to states to support child care. Parental choice and state control of policy remained central when the program was expanded in 1996 as a part of welfare reform legislation. At that time, child care funding became known as the Child Care and Development Fund (CCDF).

The present federal regulatory framework for market price surveys can be found in the CCDF Final Rule. This rule was made public in the Federal Register in August 1998 (45 CFR Parts 98 and 99). As part of this rule, states are required to conduct a child care market price survey within two years of the effective date of their currently approved CCDF plan.

The purpose of federal policy in having states conduct a market price survey is to have states establish maximum child care payment rates high enough to enable subsidy families to enter the child care market in a competitive position to find and afford care. A market price survey is a tool to be used by states to collect up-to-date information on what facilities, within given geographic areas, charge parents for various types of child care. This information is then considered during the state budget process when establishing state subsidy rate policies for providers who serve CCDF eligible families. It should be noted that the federal CCDF Final Rule is for a survey of the prices charged for child care, not a survey of the cost of child care.

In Oregon, the Department of Human Services (DHS) oversees the market price survey and recommends a budget for establishing subsidy policies. As authorized by the 2007 Oregon Legislature, DHS implemented a significant policy change by increasing maximum subsidy rates to the 75<sup>th</sup> percentile of 2006 prices for most licensed facilities and authorized a copay reduction of 24% for parents. This policy change went into effect on October 2007.

DHS has undertaken market price studies in 1990, 1992, 1994, 1999, 2000, 2002, 2004, 2006, 2008 and 2010 furthering our knowledge of how the child care market operates.<sup>ii</sup> The objectives of the year 2012 market price study were to use the methodology documented from previous market price studies to:

1. identify current prices charged for child care (i.e., current market prices),
2. identify the geographic distribution of current child care market prices across the state, and
3. calculate the accessibility of child care for those receiving child care subsidies.

As a precursor to the current geographic price analysis, a steering committee was formed consisting of DHS analysts and administrators, Child Care Division administrators, Child Care Resource and Referral representatives, and child care researchers. This committee worked with the researchers to design and implement the study. This report further details the data source and methodology, reports on the 2012 market price analysis, identifies geographic price areas, and calculates child care accessibility.

---

<sup>i</sup> Throughout this report, the term “*market prices*” or “*price*” is used to describe *prices* that are set in the open market by child care facilities. This is distinguished from the *rate of payment* established by DHS for reimbursing child care facilities.

<sup>ii</sup> Ref. 1-10

## Data

### DATA SELECTION

---

#### *Study Population*

The population of interest is the *priced child care market* in Oregon. Facilities within the priced child care market have two characteristics: (1) they charge parents a price, and (2) the price is established through an arm's length transaction. In an arm's length transaction the buyer and seller do not have a prior relationship or shared membership that is likely to affect the price charged.<sup>iii</sup> The priced market does *not* include facilities who limit their care to persons they know, as is commonly the case with family or friend caregivers.

Three major types of child care are included in the market price study: family child care homes, certified family care, and centers. Family child care facilities offer care to a small group of children in the caregiver's own home. Certified family care facilities provide care to a larger group of children, typically in a family home. In Oregon, these facilities must be certified under Oregon State Law and are required to meet certain standards not required of a registered family child care facility. Child care centers operate in a non-residential facility and must be certified by the Child Care Division unless they meet exemption criteria.

#### *Data Source*

The study universe includes all child care facilities in the priced child care market. The majority of family, friend, and neighbor caregivers have a prior relationship with the parent; thus, if they do charge a price it is not established at arm's length. The price is likely to be influenced by the prior relationship. The vast majority of family, friends, and neighbors are not part of the priced child care market.

Given that almost all centers, certified family child care, and family child care homes are captured in CCR&R database, the decision was made to use it for the 2012 market price study. The Child Care Divisions (CCD) child care licensing database was not considered because it is not designed to capture facility price data. DHS's provider database contains data on facilities that serve families who receive DHS child care subsidies. Some of these providers are enrolled with a CCR&R and/or regulated by CCD. Most, however, provide care only to family members or friends who receive DHS subsidies for child care. These facilities probably would not otherwise provide care, do not meet the arm's length criteria, and thus, are not part of the priced child care market. The DHS facility database does not accurately represent the priced market and those facilities that are part of the priced market are likely to be included in the CCR&R database.

In contrast, the vast majority of facilities in the CCR&R database offer care in the priced child care market. The CCR&R database was used in the 1992, 1994, 2000, 2002, 2004, 2006, 2008 and 2010 Oregon market price studies and has proven to be a reasonable source of price data in most communities.<sup>iv</sup> The sample of facilities contacted for the 1999 telephone survey were also drawn from the CCR&R database.

---

<sup>iii</sup> Grobe, et al.: 2008 (ref. 11).

<sup>iv</sup> The 1992 Oregon Child-Care Rates: 1992 (ref. 2); Market Rate, 1994: 1995 (ref. 3); 2000 Oregon Child Care Market Rate Study: 2000 (ref. 5); 2002 Oregon Child Care Market Rate Study: 2003 (ref. 6); 2004 Oregon Child Care Market Rate Study: 2004 (ref.7); 2006 Oregon Child Care Market Rate Study: 2006 (ref. 8); 2008 Oregon Child Care Market Price Study: 2008 (ref. 9), 2012 Oregon Child Care Market Price Study: 2010 (ref. 10).

Data include facility reports of their actual charges, thus it can be assumed that these data accurately reflect prices for child care. Finally, in preparation for the download of data for the price survey, CCR&R call facilities to assure current information on prices and other facility characteristics. *Given these characteristics, the 13 CCR&R databases were selected and combined to serve as the data source for the current 2012 market price study.*

The statewide CCR&R database of child care facilities is an aggregate of 13 local CCR&R databases representing all counties in Oregon. Child Care Resource and Referral (CCR&R) services in Oregon are provided by 13 independent, local agencies designated by the state. Each CCR&R is contracted to provide services in one of 13 Service Delivery Areas (SDA). Most agencies are housed within a larger parent agency, such as a community action program or a community college. All Oregon CCR&Rs are members of the Oregon Child Care Resource and Referral Network (OCCRRN), which coordinates and supports them in their efforts.

Each CCR&R uses a software program called NACCRRAware. As of January 2005 all CCR&Rs had converted from the previous database, CareFinder, to NACCRRAware. This database allows CCR&Rs to collect and store information on facilities and parents, and to match up parents seeking child care with complementary child care facilities. All facilities that are enrolled with a CCR&R are entered into the database. Information collected about facilities includes:

- Basic data such as name, address, telephone number.
- Type of care, days and hours of care, numbers and ages of children served, license and/or registration status, training and education of the family child care facility, and information on the care environment and curriculum.
- Care charges (prices) for ages served.
- Information such as funding in addition to parent fees, in-kind space, or grant support.

These data elements are entered into the database. There is a major update of the database each year and minor updates each quarter. In addition, the database is updated whenever a facility notifies the CCR&Rs of changes in prices or other information.

Every quarter, copies of the data in all local CCR&R databases are sent to the OCCRRN. For the market price survey, the CCR&Rs contact all facilities within a three-month period to collect current price data. The OCCRRN checks the data for accuracy, then merges all of the data into one large database, from which various statistical reports can be drawn. Each year, the OCCRRN finds additional uses for this centralized database. Currently, this database provides data for various research needs including the DHS Market Price Survey, the child care benchmarks, and the Oregon Child Care Research Partnership community planning publication.

#### *CCR&R 2012 Database Characteristics*

The data for the year 2012 market price study were downloaded from the 13 local CCR&R databases in April 2012, and compiled into a single database by OCCRRN. These data contained 5,390 facility records; 3,715 (69%) were family child care facilities, 1,103 (20%) centers, and 572 (11%) certified family care. **After facility records without price data were eliminated, the final study sample was 4,984 including 3,538 family care facilities, 894 centers, and 552 certified family care.** (See Methodological Issues for discussion of data that were and were not included in the market price study data analysis).

## DATA VALIDITY

---

Data are valid if they measure what they are intended to measure.<sup>v</sup> Basic to the validity of market price study findings is the extent to which the facilities from which price data are collected represent all facilities with child care prices. Factors that affect the representativeness of market price study findings include: completeness of data, geographic representativeness, response rate, and currency of the data. On each of these indicators, the CCR&R 2012 database was assessed to be valid.

- *Data Completeness.* Data were very complete with few missing data points for critical variables. For example, of the total sample of facilities, approximately 7% had no price data. Of this 7%, 61% were facilities (such as Head-Start programs) who do not directly charge consumers and thus have no prices to report. The balance of missing price data resulted from facility refusal to submit prices for a variety of reasons. Reasons for refusals include complicated, variable prices or preferring to discuss prices directly with parents (see page 5 for further discussion). Overall, the price data were complete for 93% of the facilities in the CCR&R database.
- *Geographic Representativeness.* The CCR&R database included information gathered from all 36 Oregon counties. By any measure, the geographic detail and sample size are adequate to represent the population of Oregon facilities who offer care in the priced child care market.<sup>vi</sup>
- *Response Rate.* Ninety-six percent of the prices in the R&R administrative dataset used for the market price survey had been updated within a three-month period. (The response rate was 98% with a six-month standard).
- *Data Currency.* The data are gathered or updated by the state's CCR&Rs each quarter and were downloaded by OCCRRN for this study in April 2012, the end of the quarter prior to the market price study analysis. These data are based on complete declared prices that facilities are offering in the marketplace. Of the price data collected by the R&Rs and stored in the R&R database, 96% were collected between January 1 and March 31, 2012, meeting a standard of 3 month currency.

The CCR&R database provides data that are relevant to policy decision-making and facilitates comparison of market prices over time. Use of the CCR&R database provides a financially feasible source of price data that is large enough and comprehensive enough to reliably produce prices at both local and state levels. CCR&R data have been used in previous market price surveys both in Oregon and in other states. Consistency in data source facilitates comparing market prices over time. Use of existing datasets, such as the CCR&R database, decreases the costs and thus increases the feasibility of periodic data collection and analysis.

Further, the CCR&R database reflects the complexity of the child care market. Less complexity would oversimplify the market and the findings. However, complexity is often confusing. It falls to the analysis to ensure that findings related to key policy variables can be easily understood and interpreted.

---

<sup>v</sup> Building Results III: 1998 (ref. 12)

<sup>vi</sup> Grobe, et al.: 2008 (ref. 11)

## Methodological Issues

### WHAT IS INCLUDED IN THE DATA ANALYSIS

---

This section describes the data that were included in the market price study data analysis, discussing the following:

- Elimination of records without price data
- Elimination of records not meeting the data currency standard
- Certified Family Child Care as Distinct Type of Care
- Part-time preschool program prices
- School-age school-year and school-age summer prices
- Converted prices

#### *Elimination of Records Without Price Data*

Of the 5,390 records provided by the CCR&R database, a total of 406 (7%) facility records were dropped from the study because no price data had been reported by these facilities to the local CCR&R. Of the 406 facilities eliminated because of no price data, 209 were centers; many of the excluded centers were classified as free programs to income eligible (such as Heart Start programs). In addition to the excluded centers, 177 family child care homes and 20 certified family care homes were eliminated because of no price data.

Omitted facilities had given several reasons<sup>vii</sup> for not reporting price data (Table 1) to the CCR&R.

- The most common reason for not reporting price data was that the facility did not consider themselves part of the market as defined in this study. Not knowing the specific reason for missing price data was the second most frequent category.
- The third most common reasons was that the facility offered a free program for families who met specified income eligibility requirements. Head Start programs are examples of a no-fee program. Centers that do not have fees may require the parent to work at the center or participate in a program, or may have their costs reimbursed by grants or other agencies.
- Facilities with variable prices are the fourth most frequently given reason for not submitting price data. Facilities who have a variable price structure either negotiate prices with parents or use a sliding scale based on income or the parent's ability to work at the center.

#### *Elimination of Records Not Meeting the Data Currency Standard*

In accordance with national guidance on market price surveys to states, prices collected prior to the six month data collection period were removed from the analyses file because these older prices could skew

**Table 1. Facilities Not Reporting Price Data (N=406)**

Category	Category Total
Not considered part of the market	181
Free program to income eligible <sup>a</sup>	67
Negotiated prices or sliding scale	16
Specific reason unknown	142

<sup>vii</sup> Specific information on the reasons for no price data was supplied by the OCCRRN. When a reason for the no price data could not be determined, OCCRRN referred those providers back to the CCR&Rs for clarification.

findings. A total of 60 facility prices were updated prior to October 2011; six months before the data was downloaded for analysis.

***After records without price data and data not meeting the currency standard were eliminated, the final study sample was 4,924 including 3,511 family facilities, 861 centers, and 552 certified family facilities.***

#### *Certified Family Child Care as Distinct Type of Care*

A central question when conducting the market price analysis was how to represent data for larger family child care facilities known as certified family care. Should there be a separate price category for certified family care? Or should certified family care be combined with family or center care?

The decision on how to represent data for certified family care is based on two factors: (1) the sample size of certified family prices, and (2) the similarity of certified family prices to family and center care prices. Similar to previous years, certified family prices were separated from center and family care in the 2012 data analysis. A sufficient number of certified family care homes (552) were included in the database to support separation of certified family from other care settings for data analysis. In addition, because certified family prices tend to be lower than the prices reported by centers, there was concern that merging the data for the two types of care may affect the price findings for both certified family care and centers (See Appendix C for detailed prices by facility type).

#### *Part-Time Preschool Program Prices*

Because part-time preschool programs are a different market from full-day centers for preschool-age children and have a different price structure, their prices should be calculated separately. However, there are two issues regarding part-time preschool prices: the identification of part-time prices in the CCR&R database, and the ability to interpret the prices when identified. Recently, the CCR&Rs updated their databases so that part-time preschool program prices could be identified; however, the ability to interpret the prices is still a concern. For example, part-time preschool program prices may have been based on 2 days a week for 3-year-olds, 3 days a week for 4-year-olds, or only 1 day a week for some programs regardless of age. ***Because of this issue, the current market price study did not examine part-time preschool program prices.*** These prices are not included in the analysis of full-day program prices.

#### *School-age School-year and School-age Summer Prices*

Because of improved data collection, the 2012 market price study reports both school-age school-year and school-age summer prices. Prior to 2002, only school-age school-year prices were reported. School-age school-year prices are considered inherently part-time prices, given they are typically based on before- and after-school care for 20 to 30 hours or less a week. School-age summer are full-time prices that are most similar to preschool-age prices. CCR&R databases were reconfigured so as to accurately capture both school-year and summer prices.

#### *Converted Prices*

One significant change with the use of the NACCRRAware database is that facilities are able to report prices in all the modes that they charge: hourly, daily, weekly, or monthly. In previous studies facilities were able to report in only one mode. The result is four independent, non-equivalent price modes. In the 1992, 1994, and 1999 market price studies, formulas were used to convert all reported prices into one mode. For example, all hourly, daily, and weekly prices were converted into a monthly price using conversion formulas. The intent was to simplify reporting and facilitate comparison of prices. The

problem with converted prices is their inability to convert accurately.<sup>viii</sup> There is no basis for assuming the length of a day or number of days that would be considered full-time. Further, converted prices do not recognize that facilities who report only hourly prices may have systematically different prices than facilities who report prices by the day, week or month. In other words, facilities who charge on an hourly basis very likely form a different child care market than those who charge by the month, week or day.

***Because of concerns with the accuracy of converted price data, no prices were converted in the year 2012 data analysis. Rather, the prices were analyzed in the mode(s) that facilities reported them.***

## PRICE PER CHILD CARE SLOTS

---

The price per child care slots was calculated by weighting the reported prices by total facility capacity. The maximum number of children desired by the facility is used rather than regulated capacity, as many programs do not enroll to their legal capacity. Total age-group capacity was defined as the total capacity for a given age group - infants, toddlers, preschool-age, school-age school-year, or school-age summer. The purpose of calculating the price per child care slot was to represent the actual prices available to consumers in the community, regardless of whether it was a large or small facility.

***For centers and certified family care homes, total age group capacity was used to weight care prices.*** Weighting prices by capacity is most important for centers, which vary extremely by size. Total age-group capacity data were used because: (1) it is possible to collect data on total age group capacity for centers and certified family care, and (2) age-group capacity used in conjunction with the prices of that age group most accurately reflects weighted prices for that particular age group. For centers and certified family care with missing age capacity data, age group capacity was estimated by calculating the proportion of total capacity from the available age group capacity data.

***For family care providers, total capacity regardless of age of child served, was used to weight care prices.*** Unlike centers that are licensed for a set capacity for each age group, family child care homes are licensed for a total capacity (with some restrictions such as no more than two children under age two).

## GEOGRAPHICALLY DEFINED RATE AREAS

---

One of the goals for the year 2012 market price study is to identify the geographic distribution of prices across the state. DHS seeks to set its allowable maximum subsidy rates so that families eligible for child care subsidies have access comparable to other families in the general population. It is presumed this access would be assured if the subsidy rates were set at the 75<sup>th</sup> percentile<sup>ix</sup> of the market price within a geographically defined area.<sup>x</sup>

Geographic rate areas were initially established in the 1992 child care market price study by grouping zip code areas in which facilities reported similar prices. These geographic rate areas were revised since then using methodology similar to that used in 1992. The basic zip code methodology used in previous market price studies was replicated again in the current year 2012 study. The steps used to identify geographic rate areas are summarized below and further detailed in Figure 1.

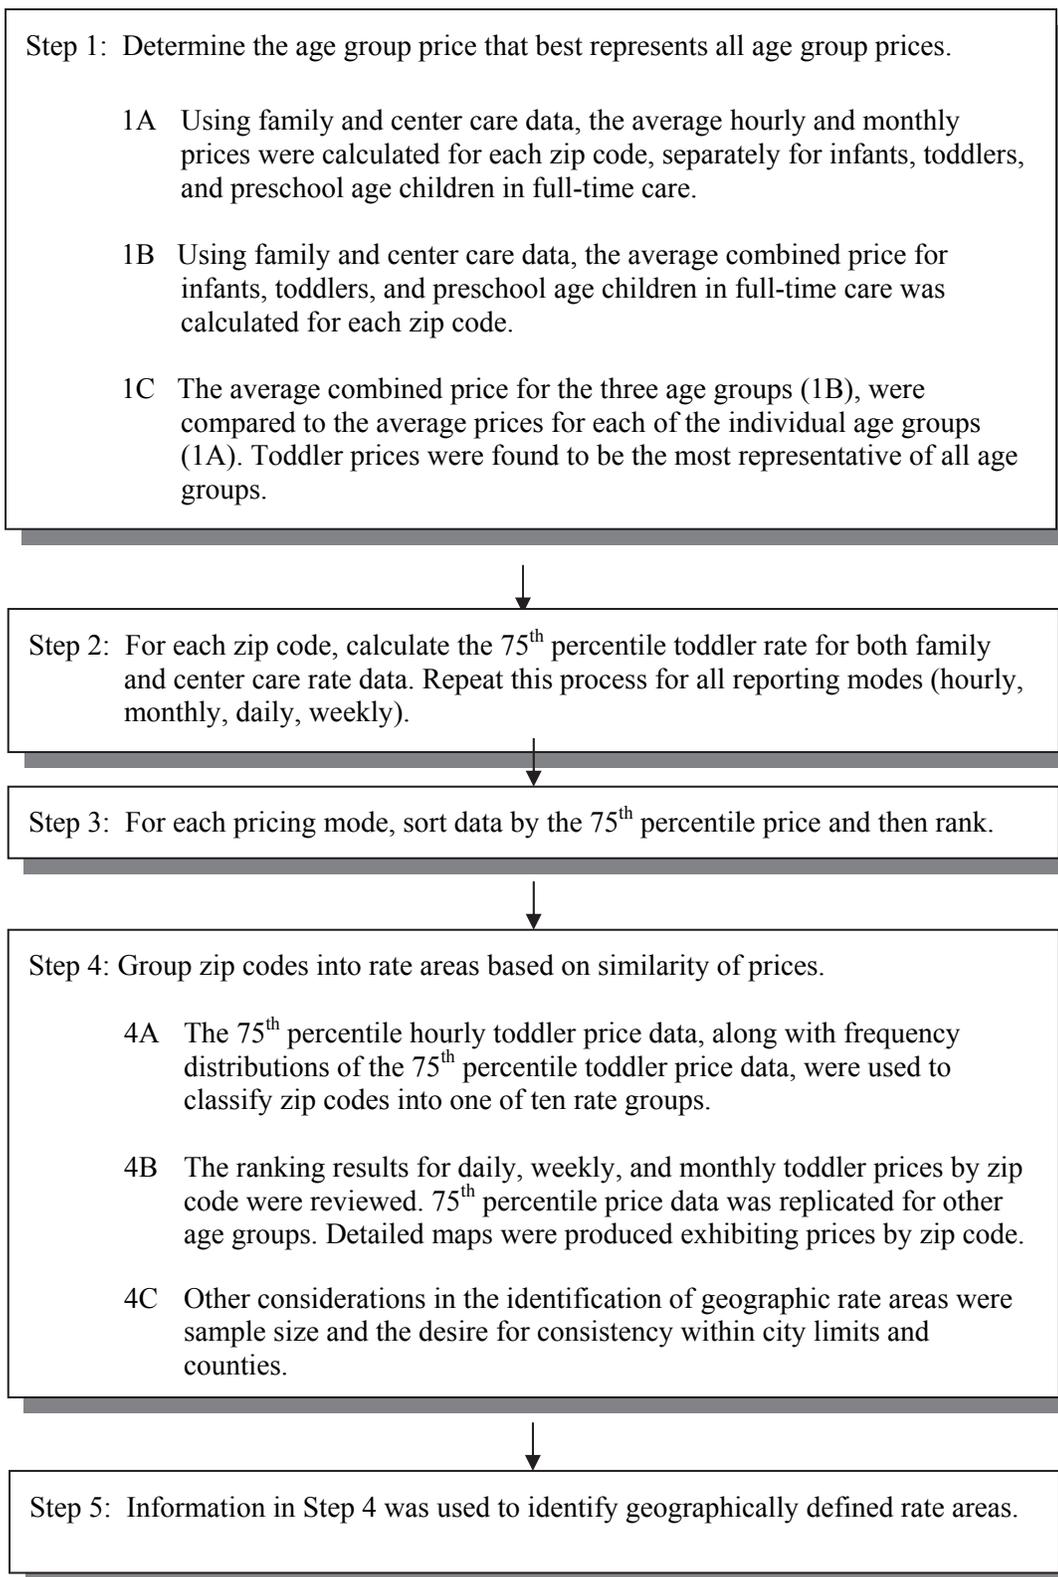

---

<sup>viii</sup> Market Rates, 1994: 1995 (ref. 3).

<sup>ix</sup> The preamble to the CCDF Final Rule suggests as a benchmark that rates established at least at the 75<sup>th</sup> percentile “would be regarded as providing equal access.” Ensuring equal access is one of three components outline in the federal regulations.

<sup>x</sup> Child Care and Development Fund Plan for the State of Oregon: FFY 2010-2011 (ref. 13); Child Care and Development Fund Final Rule: 1998 (ref. 14).

**Figure 1**  
**Steps to Identify Geographic Rate Areas**

**Step 1** was to determine which age group prices were most representative of all age group prices. Using family and center care data for each zip code area, a *combined* average price for infant, toddler and preschool age care was calculated and compared to the average prices for each separate age group. (See Table 2 for a sample of this comparison).

**Table 2. Comparison of the Average Price Combined for Infants, Toddlers, and Preschool Age to Average Prices by Child Age Group, Using Family Care Data**

City	ZipCode	Average <sup>a</sup>	Average Family		Average Family		Average Family		Average <sup>a</sup>	Average Family		Average Family		Average Family	
		Hourly Prices	Infant Hourly	Toddler Hourly	Preschool Hourly	Monthly Prices	Infant Monthly	Toddler Monthly	Preschool Monthly	Monthly Prices	Infant Monthly	Toddler Monthly	Preschool Monthly		
			<i>N<sup>b</sup></i>	<i>Avg. Price</i>	<i>N<sup>b</sup></i>	<i>Avg. Price</i>	<i>N<sup>b</sup></i>	<i>Avg. Price</i>		<i>N<sup>b</sup></i>	<i>Avg. Price</i>	<i>N<sup>b</sup></i>	<i>Avg. Price</i>	<i>N<sup>b</sup></i>	<i>Avg. Price</i>
Aurora	97002	\$2.00	1	\$2.00	1	\$2.00	1	\$2.00	\$325	1	\$325	1	\$325	1	\$325
Beavercreek	97004	\$2.63	3	\$2.63	3	\$2.63	3	\$2.63	\$325	0	-	0	-	1	\$325
Beaverton	97005	\$2.85	5	\$3.10	5	\$2.75	5	\$2.70	\$463	5	\$508	5	\$478	3	\$401
Aloha	97006	\$2.26	19	\$2.36	22	\$2.22	23	\$2.22	\$396	6	\$399	7	\$396	7	\$394

Beaverton	97008	\$2.50	3	\$2.75	4	\$2.56	5	\$2.20	\$488	3	\$542	5	\$480	6	\$442

<sup>a</sup> Average price across age groups (infants, toddlers, and preschool age children in full-time care) using family care data.

<sup>b</sup> Sample size of providers with prices for that particular zip code.

Toddler prices were found to be closest to the combined price, and most representative of all age group prices. *Thus toddler prices were selected as the basis for grouping zip codes by price data. Toddler prices were also used as the basis for grouping price data in previous studies.*

Once toddler prices were selected to represent all age group prices, **Step 2** was to calculate the 75<sup>th</sup> percentile for toddler prices in each zip code area using family and center care toddler price data. Certified family care was not used because of limited sample sizes by zip code. This process was replicated for all pricing modes (hourly, monthly, daily, weekly).

**Step 3** involved ranking the 75<sup>th</sup> percentile prices by zip code for each pricing mode. These rankings made it possible to identify zip codes with similar 75<sup>th</sup> percentile prices. Table 3 provides an example of the findings obtained from Steps 2 and 3 for zip code areas in the Portland metropolitan area.

**Step 4** used the rankings found in Step 3 to group similar prices for all zip code areas. Specifically, using the 75<sup>th</sup> percentile rankings, hourly toddler prices were classified into several price groups.

**Table 3. Example of Zip Codes Ranked on 75<sup>th</sup> Percentile for Toddler Hourly Prices, Family Care Data**

City	Zip Code	Toddler Hourly Prices at 75 <sup>th</sup> Percentile, Family Care Data		
		Rank Hourly	N <sup>a</sup>	75 <sup>th</sup> Price
Portland	97219	1	3	\$4.70
Tigard <sup>b</sup>	97224	2	3	\$4.00
Portland	97214	3	6	\$3.50
Tualatin	97062	4	4	\$3.25
Beavercreek	97004	5	3	\$3.00
Boring	97009	6	3	\$3.00
Clackamas	97015	7	6	\$3.00
Sherwood	97140	8	4	\$3.00
Portland	97204	9	1	\$3.00
Tigard <sup>b</sup>	97223	10	8	\$3.00

<sup>a</sup> Sample size of facilities with prices for that particular zip code. A single city may have several zip codes.

<sup>b</sup> The city of Tigard has more than one zip code.

To further examine prices by geographic area, detailed color-coded maps exhibiting prices by zip code were produced from the data. The ranking procedures were repeated for daily, weekly, and monthly toddler prices by zip code. This process was then replicated for all age groups.

Based on analysis of the resulting maps, the rate areas were further combined into one of three rate areas — Area A, the highest rate area; Area B, the moderate rate area; and Area C, the lowest rate area. Rate areas A, B, and C were then mapped by color-coding.

Following visual inspection of the color-coded rate maps of Areas A, B, and C, areas were refined to assure **consistency within cities**. Price consistency within geographic or political boundaries was desired to avoid “islands” of price discrepancy. For example, based on prices alone, one northeast Portland zip code was originally assigned to rate area C. However, this zip code was fully surrounded by the balance of Portland zip codes that were in rate area A. Child care markets are made up of parents and providers who have access to one another. Within a city, a zip code does not operate as its own market as parents commonly live in one zip code and access care in another zip code. A city represents a better option for approximating a child care market. To reflect Portland as a single child care market, this northeast Portland zip code is reassigned to rate area A. Similar decisions were made for zip codes in the Eugene, Salem, and Bend areas.

In some geographic areas, very small sample sizes or records without price data limited reliability of the data. In these cases, price patterns for neighboring zip codes and from previous market price studies were used to identify current rate areas. For example, in eastern Oregon two zip codes originally identified to be in rate area B were surrounded by zip codes assigned to area C. The sample sizes for the discrepant zip code areas were small, thus these zip code areas were reassigned to rate area C, to be consistent with surrounding communities.

**Step 5** was to propose the three geographic rate areas. These areas were then used as the basis for all subsequent analyses.

## CHILD CARE ACCESSIBILITY

---

In 2002, 2004, 2006, 2008 and 2010 the Oregon market price study was expanded to examine the relationship between current market prices and state subsidy rates. This analysis was repeated in the 2012 study. There was interest in better understanding the accessibility of child care for those receiving child care subsidies. Market price data were used to determine:

- (1) percentage of slots statewide that can be purchased at or below the maximum subsidy rate, and
- (2) percentage of facility care by zip code that can be purchased at or below the maximum subsidy rate. This measure was created to determine whether the amount of access varied by geographic location.

### *Percentage of slots statewide that can be purchased at or below the maximum subsidy rate*

The data for this analysis included all of the facility data for rate areas identified in **Step 5** above (this included all three rate areas: A, B, and C). Prices were included for toddler care, full-time hourly or monthly, for family, center, and certified family care. Hourly prices were used for family care and monthly for center and certified family due to them being the predominant mode for those types of care. Because toddler prices have been found to be the most representative of all age-group prices, they were selected as the basis for calculating child care accessibility (see Table 4, Box A).

**Step 1** is to create a column of data to indicate the licensed rate maximums (LRM)<sup>xi</sup> for each facility based on the facilities particular rate area (A, B, C), type of care (family or center), and mode of reporting prices (hourly or monthly) (see Table 4, Box A). This LRM was increased by 5% to provide a range of prices around the subsidy rate that would be considered accessible.

**Step 2** involves creating an indicator variable (0, 1) for each observation to indicate whether the facilities prices are equal to, less than, or greater than the licensed rate maximums. Use 1 to indicate prices that are equal to or less than the licensed rate maximums; and 0 otherwise (see Table 4, Box B).

**Step 3** is to create a weighted licensed rate maximum variable that multiplies the licensed rate maximum indicator variable by the number of child care slots for that particular facility (see Table 4, Box C).

In **step 4**, calculate the percentage of child care slots that can be purchased at the current state maximum payment rate with the following formula (see Table 4, Box D):

$$1 - [(\text{sum of total capacity} - \text{sum of licensed rate maximums (weighted)}) / \text{sum of total capacity}]$$

*Percentage of facility care by zip code that can be purchased at or below the maximum subsidy rate*

Using the same data that was created above, determine the sample size and mean of the licensed rate maximum indicator variable by zip code. An example of a SAS statistical code to calculate the sample size and mean by zip code is:

```
proc sort; by zip;
run;

proc univariate noprint;
by zip;
var licensed_rate_maximum;
output out=new n=ne mean=meane;
run;

proc print data=new;
run;
```

This will produce a percentage of facilities who are at or below the licensed rate maximum by zip code.

---

<sup>xi</sup> As authorized by the Oregon Legislature, DHS increased maximum subsidy rates to the 75<sup>th</sup> percentile of 2006 prices for most licensed facilities. This policy went into effect October 2007.

**Table 4. Example of Methods Used to Calculate Child Care Accessibility.**

Provider ID	Geographic Rate Area	Type of Care	Total Child Capacity	Full-Time Toddler Price	Full-Time Toddler Price Unit	Licensed Rate Maximum		LRM Indicator	LRM (Weighted)
						LRM (LRM) Subsidy + 5%	LRM (Weighted)		
C105	A	Family	3	\$7.00	hourly	\$3.15	0	0	
I849	A	Family	5	\$6.00	hourly	\$3.15	0	0	
M766	A	Family	8	\$5.00	hourly	\$3.15	0	0	
A632	A	Family	6	\$5.00	hourly	\$3.15	0	0	
M635	A	Family	7	\$5.00	hourly	\$3.15	0	0	
N328	A	Family	3	\$5.00	hourly	\$3.15	0	0	
S172	A	Family	9	\$5.00	hourly	\$3.15	0	0	
T952	A	Family	3	\$5.00	hourly	\$3.15	0	0	
T445	A	Family	10	\$2.25	hourly	\$3.15	1	10	
Z749	A	Family	7	\$2.25	hourly	\$3.15	1	7	
X979	B	Family	5	\$3.50	hourly	\$2.63	0	0	
A314	B	Family	2	\$3.50	hourly	\$2.63	0	0	
I879	B	Family	10	\$3.50	hourly	\$2.63	0	0	
O258	B	Family	6	\$222	monthly	\$473	1	6	
P289	B	Family	9	\$240	monthly	\$473	1	0	
M291	B	Family	10	\$250	monthly	\$473	1	10	
M280	C	Center	26	\$390	monthly	\$566	1	26	
B689	C	Center	24	\$390	monthly	\$566	1	24	
D365	C	Center	32	\$392	monthly	\$566	1	32	
E786	C	Center	18	\$400	monthly	\$566	1	18	
F156	C	Center	40	\$419	monthly	\$566	1	40	
F157	C	Center	17	\$419	monthly	\$566	1	17	
						<b>260</b>			

**A**

\$2.63 is the state licensed rate maximum (LRM) subsidy for family, full-time, hourly toddler care in rate area B. This rate includes a 5% increase.

**B**

1 = LRM is greater than or equal to facility full-time toddler rate (e.g., \$473 > \$240)

**C**

LRM (weighted) = [total child capacity] \* [LRM indicator]. For example, 40 \* 1 = 40.

**D**

For example,  $1 - [(260 - 199) / 260] = 76.5\%$  of child care slots can be purchased at the current state licensed rate maximums.

## Findings

### YEAR 2012 STATEWIDE CHILD CARE PRICES

Statewide, full-time child care prices are shown in Table 5. These prices are based on the charges reported by child care facilities to their local CCR&Rs. Specifically, Table 5 shows the **full-time prices** at the 75<sup>th</sup> percentile of child care slots by **type of care** (family, center, certified family), **age of child** served (infant, toddler, preschool-age, school-age school-year, school-age summer), and by **pricing modes** (hourly, monthly).

*The 75<sup>th</sup> percentile of prices is the price level at which 75% of child care slots may be purchased.* For example, the 75<sup>th</sup> percentile of infant care prices is \$560 for full-time, monthly family child care. This means that statewide 75% of the infant slots may be purchased for \$560 a month or less in family child care settings.

**Table 5. Statewide Full Time Prices  
at the 75<sup>th</sup> Percentile for Child Care Slots**

TYPE OF CHILD CARE & PRICING MODE	Infant	Toddler	Preschool Age	School Age School Year	School Age Summer
<i>Family</i>					
Hourly	\$3.00	\$3.00	\$3.00	\$3.00	\$3.00
Monthly	\$560	\$530	\$500	\$450	\$500
<i>Center</i>					
Hourly	\$5.00	\$5.00	\$4.65	\$4.65	\$4.50
Monthly	\$1121	\$1081	\$850	\$419	\$700
<i>Certified Family</i>					
Hourly	\$5.00	\$5.00	\$4.50	\$4.00	\$4.00
Monthly	\$900	\$875	\$750	\$600	\$600

See Appendix C for complete results.

Several trends in statewide child care prices are apparent in Table 5. Among these are the following.

- Prices are generally lower for family child care than for centers and certified family care regardless of age of child served or pricing mode.
- For all types of care, preschool and school-age prices are lower than infant and toddler care prices.
- Certified family prices are more consistent with centers than family prices, especially for infant, toddler, and preschool age monthly prices. Although certified family care homes are considered a type of family care, they are like centers in terms of regulation and policies.

These statewide figures are informative but do not capture the substantial range of prices found across Oregon. Child care markets are local and prices differ substantially across the state. The next section describes the findings of the geographic rate analysis that explored price differences across communities.

## YEAR 2012 PRICES IN GEOGRAPHIC RATE AREAS

---

As described earlier, an analysis of prices by zip code was used to identify similar child care markets (see methodology in previous chapter). The result was the identification of three rate areas: A, B, and C. These areas included zip codes that were similar to those identified in the 1994, 2000, 2002, 2004, 2006, 2008 and 2010 market price studies. Rate Areas B included a slight expansion; as this area was expanded, rate Area C was proportionally reduced.

### *Comparison of Statewide Prices and Prices in Three Rate Areas*

To test the validity of the three rate areas (A, B, C), two different analyses were conducted. The first measured the association of the geographic rate areas with demographic characteristics of Oregon counties. Overall the results shown in Table 6 indicate that child care prices are most highly correlated with median housing costs (0.77) and median gross rent (0.74); with Area A prices being consistently associated with higher housing and rent costs, Area C are the lowest, and Area B ranges fall between Area A and C. These patterns continue but to a lesser extent for urban/rural classification, household income, population, and percent urban.

The second analysis compared Oregon statewide prices to prices in the three rate areas. If the areas were valid, within care type and age group served, Area A prices should exceed the statewide price, Area C prices should be lower than the statewide price, and Area B rates should approximate the statewide price. Figure 2 graphs comparing the 75<sup>th</sup> percentile monthly prices per child care slot, across type of care, and age group served demonstrate that (See Appendix B for complete figures):

- ***Prices consistently differ by rate areas regardless of type of care or age of child served.*** Area A rates are consistently the highest prices in the state, Area C prices are the lowest, and Area B prices fall between rates in Areas A and C.
- ***The greatest differences in prices by rate area were found for center care and certified family care.*** This is especially true for infant and toddler care prices. For example, in Area A the 75<sup>th</sup> percentile center care for infant care is \$1,205 per month while in Area C this percentile price is \$586 per month, a difference of \$619 per month. Similarly, the 75<sup>th</sup> percentile price for infant care in certified family homes is \$1,000 in Area A while in Area C this price is \$500 per month, a difference of \$500 per month.
- ***Family care prices showed only small differences by prices, by geographic areas.*** Family care prices ranged from \$625 in Area A to \$450 in rate Area C for infant care. These price differences are about \$175 per month, substantially less than the \$619 to \$500 differences observed in center and certified family care prices by rate area (reported above).

***These patterns validated the rate areas and provide evidence of three different child care markets in Oregon; these markets are also influenced by type of care provided. However, the validation also provides evidence of two trends: (a) the price range for rate Area A is widening, and (b) statewide prices are more closely representing rate Area A than B, especially for centers and certified family homes.***

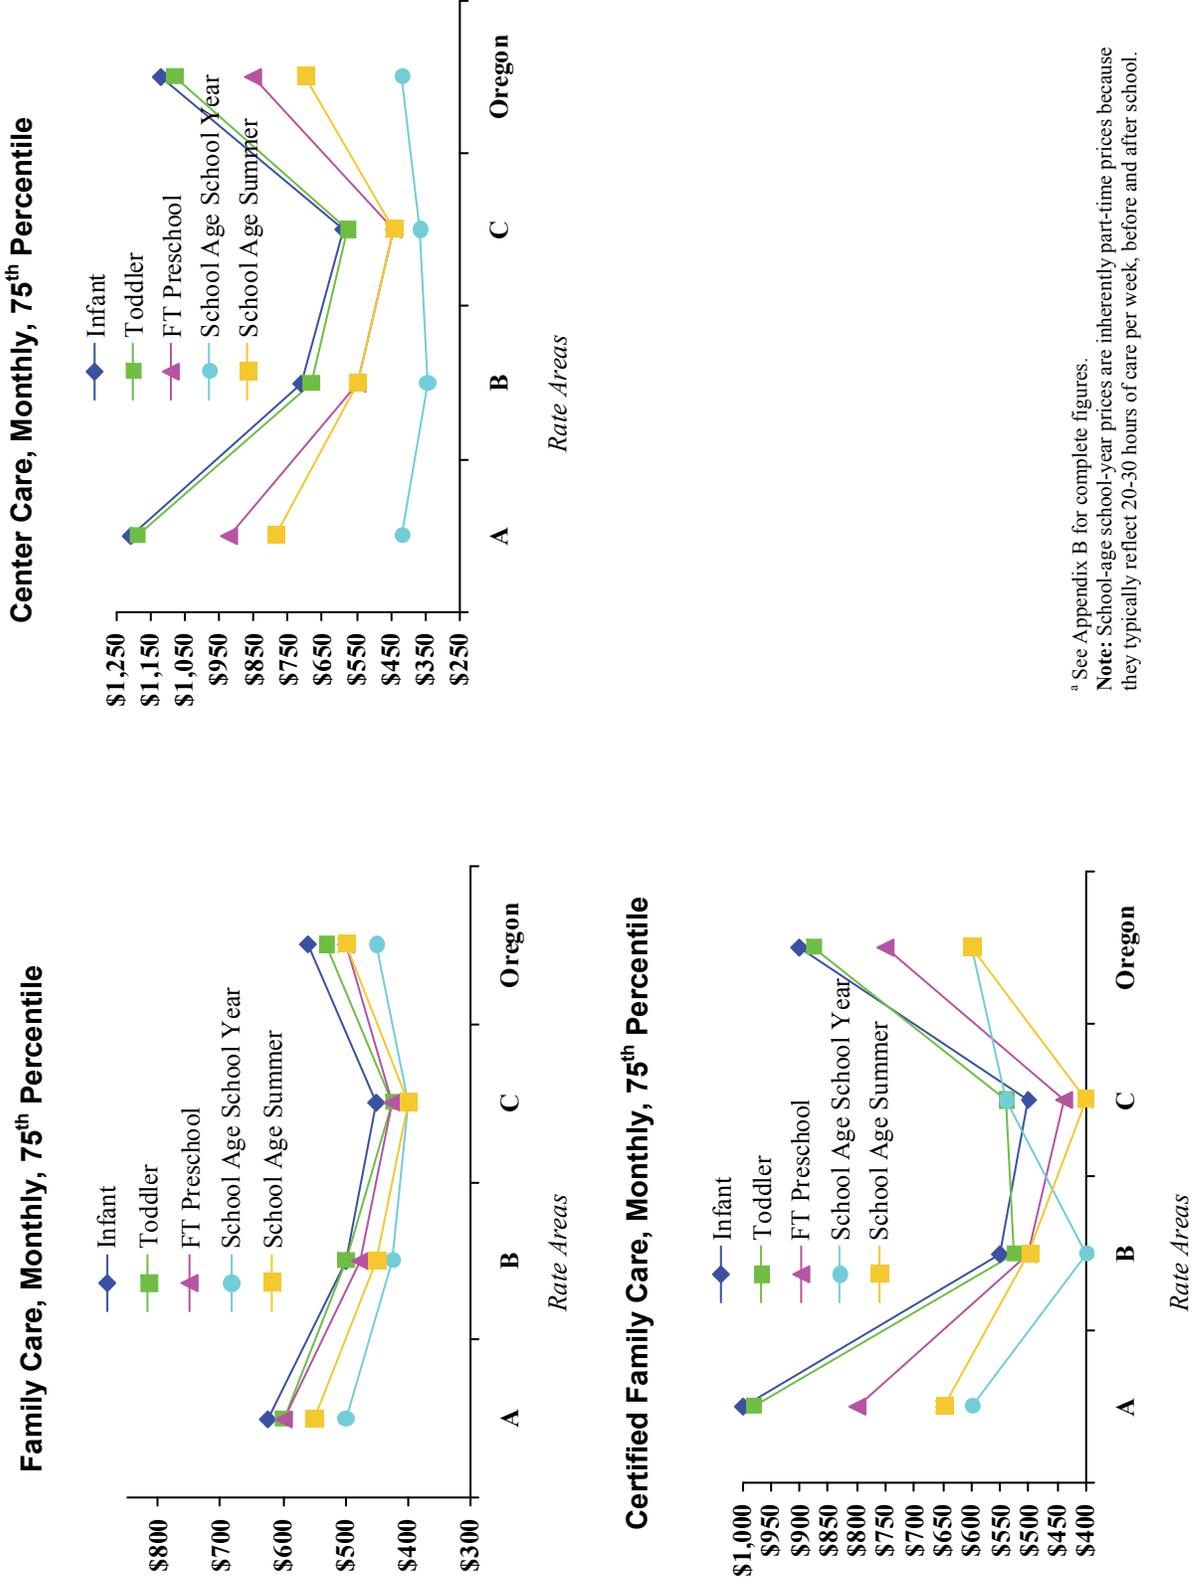

**Table 6. Geographic Rate Areas: Association with Demographic Characteristics of Oregon Counties**

County	2012 Rate Area	1=Metro 2=Micro 3=Noncore	% Urban	Population	Median		Median Household Income
					Monthly Housing Costs	Monthly Rent	
Benton, Clackamas, Columbia, Deschutes, Hood River, Lane, Multnomah, Washington	A	1 to 2	43% to 98%	22,385 to 736,785	\$1,088 to \$1,628	\$676 to \$906	\$42,923 to \$62,574
Clastop, Coos, Curry, Douglas, Jackson, Lincoln, Linn, Marion, Polk, Tillamook, Wasco, Yamhill	B	1 to 3	24% to 85%	22,355 to 315,900	\$632 to \$1,368	\$641 to \$817	\$37,491 to \$52,485
Baker, Crook, Gilliam, Grant, Harney, Jefferson, Josephine, Klamath, Lake, Malheur, Morrow, Sherman, Umatilla, Union, Wallowa, Wheeler	C	2 to 3	0% to 70%	1,440 to 82,775	\$657 to \$1,021	\$390 to \$759	\$33,403 to \$46,059

**Correlation Findings:**

- Child care prices are most highly correlated with housing costs (0.77) and rent (0.74)
- Child care prices are less highly correlated with metropolitan/micropolitan/noncore (0.72), household income (0.68), population (0.61), and percent urban (0.56)

**Figure 2<sup>a</sup>**  
**Comparison of 2012 Rate Areas and Oregon Statewide Prices by Child Care Slots**

<sup>a</sup> See Appendix B for complete figures.  
**Note:** School-age school-year prices are inherently part-time prices because they typically reflect 20-30 hours of care per week, before and after school.

### *Comparison of Rural-Urban Patterns in Child Care Prices*

Overall, the geographic analysis showed the child care prices to be lower in rural areas of the state and higher in the Portland metropolitan area, parts of the Mid Willamette Valley, and parts of Deschutes and Jackson counties.

- **Rate Area A** contains zip codes with the highest prices and has 55% of all child care facilities. Area A includes the Portland metropolitan area, Mount Hood, Corvallis, Independence, Monmouth, Seal Rock, Eugene, Springfield, Ashland, Bend, and Gold Hill.
- **Rate Area B** costs are most consistent with statewide average prices. Area B has 32% of all child care facilities, and includes the cities of Salem, Stayton, Astoria, Hammond, Coos Bay, Coquille, Lincoln City, Sweet Home, Sisters, Redmond, Medford, Roseburg, Albany, Woodburn, Halsey, Philomath, and areas outside the Portland metropolitan area and the Mid-Willamette Valley.
- **Rate Area C** includes all communities not in Area A or B, including all of Oregon's rural areas. Rate Area C includes 12% of all child care facilities.

### *Comparison of Child Care Facility Prices and Child Care Slot Prices*

Tables 7, 8, and 9 compare statewide prices and prices in the three rate areas by type of care, by age of child served, and by price type (child care facility price or child care slot price). Slot prices were determined by multiplying the facility price by the maximum number of children desired by the facility (slots). This comparison was made to determine if the facility price or slot price differed systematically.

The 75<sup>th</sup> percentile levels for child care facility prices and child care slot prices were compared. This comparison revealed that the prices are similar within age groups and facility type, whether these prices are by facility or by child care slot.

- Among family care, monthly facility prices and monthly slot prices were identical in 13 of the 15 comparisons (Table 7, monthly 75<sup>th</sup> percentile prices, Areas A, B, and C, by child age). Where price differences were observed, slot prices were *higher* in both cases than unweighted facility prices.
- Among center care facilities in Areas A and B, monthly prices for child care slots were *higher* than monthly facility prices in 4 of the 10 comparisons, lower than monthly facility prices in 4 of the 10 comparisons, and the same in 2 comparisons (Table 8, monthly 75<sup>th</sup> percentile prices, Areas A and B, by child age). Slot prices (4 of the 10 comparisons) averaged \$90 higher than the unweighted prices, and averaged \$21 lower than unweighted prices.
- Among center care facilities in Area C, monthly prices for child care facilities were *higher* than monthly slot prices in three (toddler, preschool age, school age school year, and school age summer care) of the five comparisons.
- Among certified family care, monthly facility prices and monthly slot prices were identical in 5 of the 15 comparisons (Table 9, monthly 75<sup>th</sup> percentile prices, Areas A, B, and C, by child age). In 6 cases, slot prices were *higher* than unweighted facility prices by an average of \$70; in 4 cases, the slots price was slightly *lower* than the unweighted facility price.

Table 7. 2012 Rate Areas Compared to Oregon Statewide Prices for Family Child Care

See Appendix D for complete results.

These findings suggest that prices do not vary substantially whether reported as facility prices or weighted by the capacity (slots). Facilities with larger care capacity (those with more slots) did not charge systematically higher or lower prices for care at the monthly, 75<sup>th</sup> percentile.

***Given the non-systematic differences found between facility prices and slot prices at the 75<sup>th</sup> percentile monthly price, either could be used to represent costs of care. Because child care slot prices most accurately represent the prices available to consumers in the community, child care slot prices were used as the basis for graphs of prices as well as the basis for final identification of geographic rate areas.***

## COMPARISON OF 2012 MARKET PRICE DATA WITH PREVIOUS MARKET PRICE DATA

---

### *Comparison of Geographic Rate Areas for 2010 and 2012*

Two maps in Appendix E show (1) the year 2012 rate areas, and (2) the areas that have changed between the 2010 and 2012 market price studies. Overall, these maps indicate that based on analysis of current prices:

- ***The majority (99%; 462) of Oregon zip code areas remain in the same rate area in 2012 as they were in 2010.*** This reflects stability in the geographic distribution of prices.
- ***Less than one percent (2) of zip codes moved into a higher rate area (i.e., from C to B) from 2010 to 2012.*** These zip code areas include parts of the counties of Douglas and Umatilla, and the cities of Athena and Sutherlin.
- ***No zip codes moved into a lower rate area based on prices in 2012.***

Appendix F provides the median toddler prices for all counties in Oregon by type of care and pricing modes. Also available (see Appendix G) is a complete listing of Oregon zip codes, towns and cities, counties, and classified by 2002, 2004, 2006, 2008, 2010 and 2012 rate areas and sorted by cities, as well as by counties (see Appendix H).

***Again it should be noted that the geographic rate areas are based on analytical findings regarding current prices. Other considerations, such as the possible impact on supply in zip code areas that “fall” from a higher to a lower rate area, were not considered.***

### *Comparison of Year 2012 Data With Previous Market Price Data*

To further examine changes in facility prices over the years, market price data in 1994, 1999, 2000, 2002, 2004, 2006, 2008, 2010 and 2012 were compared (Table 10). Table 10 presents the statewide 50<sup>th</sup> and 75<sup>th</sup> percentile full-time prices, by type of care, and by age groups served.

<sup>a</sup> 50<sup>th</sup> percentile statewide prices were not available for the 1999 survey. <sup>b</sup> Unweighted facility prices.

Similar data were not available for all years, thus to facilitate comparison across years, Table 10 utilized the following definitions and data:

- “CCR&R” refers to data obtained in 1994 (5,889 providers), 2000 (6,504 providers), 2002 (6,308 providers), 2004 (6,232), 2006 (5,882), 2008 (5,597), 2010 (5,272), and 2012 (4924) market price studies using price data given by facilities to their local CCR&R. “Survey 1999” refers to data collected from a random sample of 1,201 CCR&R enrolled providers, interviewed by telephone.
- Child care slot prices are shown for 1994, 2000, 2002, 2004, 2006, 2008, 2010 and 2012 CCR&R studies, only facility data were available in 1999. Use of slot data facilitates the comparison of prices in those five years.
- For 1999 telephone survey, only the 75<sup>th</sup> percentile statewide prices for child care facilities (not weighted by capacity/child care slot prices) are available.
- Hourly data is shown for family care; monthly prices are shown for center care. (The majority of family facilities charge on an hourly basis for full-time care; most centers charge by the month).

The complexity of the child care market and the variability of data and data reporting in past studies complicate defining patterns in costs of child care over time. Nevertheless, some patterns in statewide child care prices are apparent in Table 10.

- ***From 1994 to 2012, statewide prices rose for all ages and types of care.***
- ***From 1994 to 2012, statewide prices increased more in center care than in family child care.***

For example, based on the 75<sup>th</sup> percentile of prices for toddler care:

- ✓ CCR&R reported monthly prices for center, toddler care rose from \$544 (1994) to \$1,081 (2012), a total rise of \$537 per month or 99%.
- ✓ CCR&R reported hourly prices for family, toddler care rose from \$1.75 (1994) to \$3.00 (2012), an increase of 71%. Compared to 2010 CCR&R data, 2012 price data remained the same for family, toddler care.
- ✓ Compared to 2010 CCR&R data, 2012 price data indicates an 8% increase in center care monthly prices for toddlers at the 75th percentile (from \$998 in 2010 to \$1,081 in 2012). Hourly family care prices at the 75th percentile did not change between 2010 and 2012 (\$3.00 in 2010 and 2012).

## CHILD CARE ACCESSIBILITY

---

Findings show that from 1994 to 2012, statewide prices rose for most ages and types of care. Price increases ranged from a low of 50% to a high of 122% from 1994 to 2012 depending on age group and type of care. Since the 2010 market price study the Oregon minimum wage has increased twice resulting in an increase from \$8.40 to \$8.80 per hour; a 40¢ increase.

The 2012 prices at the 75<sup>th</sup> percentile for the identified rate areas were found to be closer to DHS licensed rate maximums for all ages and type of care than in market price surveys prior to 2008 (see Appendix D). This is primarily the result of policy changes in maximum rates effective October 1, 2007.

To further examine the relationship between current market prices and DHS subsidy rates, market price data were used to determine: (1) percent of slots statewide that can be purchased at or below the

maximum subsidy rate, and (2) percent of facility care by zip code that can be purchased at or below the maximum subsidy rate. The second measure was created to determine if the amount of access varied by geographic location. Because toddler prices have been found to be the most representative of all age group prices, they were selected as the basis for calculating child care accessibility.

*Percent of Child Care Slots Statewide That Can Be Purchased at or Below the Licensed Rate Maximums*

Table 11 shows that currently, 58% of toddler, family, center, and certified care slots can be purchased at the DHS licensed rate maximums. This means that DHS subsidy rates give access to over half of slots in the toddler care market. The percent of slots that can be purchased with the value of DHS payment rates decreased from 64% to 58% between 2010 and 2012. The primary explanation for this decrease is an increase in market prices for most licensed facilities as maximum subsidy rates have remained at the 75th percentile of 2006 market prices.

**Table 11. Percent of Child Care Slots that can be Purchased at the Licensed Rate Maximums**

<i>Full-time, Toddler, Family and Center Care</i>	<b>% of child care toddler slots that can be purchased at the licensed rate maximums</b>						
	2000	2002	2004	2006	2008	2010	2012
	<b>38%</b>	<b>24%</b>	<b>21%</b>	<b>26%</b>	<b>68%</b>	<b>64%</b>	<b>58%</b>

*Percent of Facility Care That Can be Purchased at or Below the Licensed Rate Maximums by Zip Code*

Findings on access by geographic location are shown in Table 12 and on the last two maps in Appendix E. In 20% of Oregon zip code areas that have prices, no care from family child care facilities can be purchased at the licensed rate maximums. Similarly in 28% of Oregon zip code areas that have prices, the licensed rate maximums are not high enough to purchase any center child care. In about 53% of zip code areas families can purchase over 50% of family child care in the community at the licensed rate maximums, and in 47% of zip code areas families can purchase over 50% of center child care.

**Table 12. Percent of Child Care Facilities Whose Price is Less Than or Equal to the DHS Licensed Rate Maximums**

	<b>Family Care</b>		<b>Center Care</b>	
	<b>Number of Zip Codes</b>	<b>Percent of Zip Codes</b>	<b>Number of Zip Codes</b>	<b>Percent of Zip Codes</b>
0%	46	20%	35	28%
1% to 25%	10	4%	7	6%
26% to 50%	53	23%	24	19%
51% to 75%	61	26%	14	11%
Greater than 75%	62	27%	44	36%

**Note:** The number of zip codes for center care is lower than family care because there are fewer centers throughout the state.

The DHS licensed rate maximums include both the amount families' pay in copay and the DHS child care subsidy amount. As can be seen on the maps in Appendix E, the value of a child care subsidy, when combined with the family copay, does cover child care prices in the market in most parts of the state. Deeper colors designate geographic areas in which the enhanced subsidy value is enough to cover the prices of few, if any, community child care providers. Examination of the maps indicates that this is a statewide phenomenon rather than one limited to urban areas.

## Conclusions

***The geographic price analysis identified three geographic market area boundaries that are generally similar to those identified in the previous market price studies.***

The market survey validates the existence of three different child care markets in Oregon. The areas included zip codes that were similar to those identified in the 1994, 2000, 2002, 2004, 2006, 2008, and 2010 market price studies. Based on overall market price increases, there are more zip codes in Area B and fewer for market rate Area C than found in the 2010 market price study. Although there are few changes to the rate areas in 2012, there continues to be evidence of two trends: (a) the price range for rate Area A is widening, and (b) statewide prices are more closely representing rate Area A than B for some types of care. These trends are problematic and future analyses are needed to better understand these findings.

***DHS licensed rate maximums are adequate to purchase over half (58%) of market child care slots statewide. In 20% of family and 28% of center zip code areas that have prices, the DHS licensed rate maximums are not adequate to purchase any market child care.***

The percent of slots that can be purchased with the value of DHS payment rates decreased from 64% to 58% between 2010 and 2012. The primary explanation for this decrease is an increase in market prices for most licensed facilities as maximum subsidy rates have remained at the 75th percentile of 2006 market prices. The current market price study shows that 58% of toddler, family, center and certified family care slots can be purchased at the DHS licensed rate maximums. To assure that families eligible for child care subsidies have access to the child care market, Congress recommended that payment rates be set at the 75<sup>th</sup> percentile of the market price. Currently, DHS licensed rate maximums are adequate to purchase more than half of market child care slots statewide. In 20% of family and 28% of center zip code areas, the DHS licensed rate maximums are not adequate to purchase any market child care.

***CCR&R data continues to provide a reliable and cost-effective source of data for statewide market price studies.***

The statewide CCR&R database remains the most feasible source of data for the child care market price studies. First, the database is sufficiently large and comprehensive to support analysis of statewide market prices. Second, it is representative of the child care priced market. Third, it is a convenient, inexpensive, and accessible data source. Finally, the CCR&Rs continue to maintain a high standard for completeness and currency of both price and desired capacity data.

***Prices should continue to be reported for both child care facilities and slots. Analysis should be based on slots since this most accurately represents what families experience when purchasing care.***

Analysis demonstrated non-systematic differences between facility prices and child care slot (weighted) prices at the 75<sup>th</sup> percentile. Thus, either could be used to represent prices of care. However, child care slots are believed to most accurately represent the prices available to consumers in the community, and are recommended as the preferred method to report price data.

***CCR&Rs should continue to collect price information in the mode(s) that reflect how facilities charge.***

The prices for the year 2012 market price study were reported for four independent, non-equivalent price samples. Having only one common mode of reporting prices would simplify reporting and facilitate comparison of prices. However, in reality, facilities charge in four different modes (hourly, daily, weekly, monthly) that represent different child care markets and should be reflected in the database and in the market price report.

## Appendices

## Glossary

**Age of care**—age of child receiving care; the four different age groups are *infant* (under a year), *toddler* (12 - 24 months for family care, 12 - 30 months for center or group home care), *preschool age* (2 - 5 years old for family care, 2 ½ - 5 years old for center or certified family care), and *school age* (5 years old and up)

**Child care facility prices**—facility prices for care as reported to their local CCR&R

**Child care slots**—represents the cost per child care slot

**Total facility capacity**—maximum number of children desired by the facility

**Total age group capacity**—total capacity for a given age group (infants, toddlers, preschool age, school age school year, or school age summer)

**Cost of care**—facilities' costs to provide child care that is often greater than the price charged to parents

**Family copay** – the portion of the child care fee paid by parents

**Market price or prices**— prices that are set in the priced child care market by facilities

**Priced child care market**— Facilities within the priced child care market have two characteristics: (1) they charge parents a price, and (2) the price is established through an arm's length transaction. In an arm's length transaction the buyer and seller do not have a prior relationship or shared membership that is likely to affect the price charged. The priced market does *not* include facilities who limit their care to persons they know, as is commonly the case with family or friend caregivers.

**Pricing modes**—the various ways prices can be reported: hourly, daily, weekly, monthly

**75<sup>th</sup> Percentile**—the price level at which 75% of child care slots may be purchased

**Licensed rate maximums**—the DHS maximum subsidy rates that have been in effect since October 2007

**Type of care**—care setting or facility

**Family child care**—provided in the provider's home; small group of children; relative or non-relative provider

**Center care**—full or part-time care and education; provided by caregivers/teachers always located in building other than home

**Certified family care**—one or more caregivers; no more than 16 children at any one time; care provided in home setting
