

NAME: Granite Group *Cable Cove* ~~Cracken Creek~~ District Baker County

OWNER: George Ingerson, Baker, Oregon.

LOCATION: SW corner of Sec. 13 or thereabouts. Elevation, 7000 to 8000 ft. T 8 S, R 36 E.

AREA: 12 claims across ridge into Cable Cove located 1938.

DEVELOPMENT: 2000 ft. drift on one claim. Numerous ^{open} ~~cross~~ cuts.

EQUIPMENT: None. Property is still in prospect stage.

MISCELLANEOUS: Scanty Spruce and Hemlock. Snow fall heavy during winter. Relatively inaccessible by same road that goes to Argonaut Mine, 1 mile north.

GEOLOGY: Country rock granodiorite. This property is on one of the same system of veins that the Imperial, California, and other mines of Cable Cove are located upon. There are two veins on the property about 500 ft. apart. They strike about N 60 E and dip steeply to the S. The north vein has been prospected by over 20 ditches, and assays run from a few cents up to \$20.00 in gold. The south vein has been prospected by a 100 ft. drift from which some ore apparently has been taken. There are two veins about 20 ft. apart at this point, ore ~~ore~~ consisting of quartz~~ite~~, limonite seams and altered limonitic granite walls up to 3 feet in width. One sample of a foot ~~across~~ ^{the} vein ran \$18.20. The vein at this point runs N 65 E and dips 75 degrees S. In other localities the altered zone is considerably wider and assays over as great a distance as 20 ft. Said to contain values.

RECOMMENDATIONS: There is a possibility of economic development on this property. Mr. Ingerson has had numerous assays made but the assayer is not known. Assays made by Mr. Motz ran from \$2.45 to \$18.20. The Imperial Mine only $\frac{1}{2}$ mile to the south and the Argonaut Mine 1 mile to the north have both produced values.

INFORMANT: George Ingerson.
