THE JACKLEY CLAIM

WALLOWA
RANGE
CORNUCOPIA
DISTRICT

The Jackley Claims.—The "Jackley" vein is about one-fourth mile west of the Wild Irishman vein, at a little lower elevation. It is a vein of fair width and considerable work is being done upon it by the owner. Fair values are encountered in the drift at times although the main objective has not yet been reached. The surface beyond shows some displacement of the vein by basalt dikes which may prove troublesome. Fragments of greenstone in dimensions from a few inches to a few feet are found here in the granodiorite. The granodiorite is more basic, probably due to its melting and assimilation of greenstone. Some of the unmelted fragments actually show recrystallization decreasing toward their interiors. This place is probably near the roof of the intrusion, only a downward projection of the greenstone roof remaining, the rest having been eroded away.
