MAYFLOWER MINE

WALLOWA RANGE

(See also Jim Fisk Vein)

CORNUCOPIA DISTRICT

The Mayflower Mine.—This mine is probably located on a
sion of the Last Chance vein but on the other side of the mo.
The vein has the same strike and about the same dip. Its miner
tion is similar to the other veins in the region, though the amount of
sulphide is somewhat less.

The vein here is smaller than at the Last Chance, being at the
widest place not over three or four feet and in many places pinching
out entirely. There is evidence in the walls that they have been
subjected to a great deal of pressure, but there are no signs here of
any great movement. This mine is developed with two adit levels
and one intermediate. A raise in the vein 530 feet to the surface con-
nects the several workings.

The property operated its stamp mill and cyanide plant with
steam power. They exhausted their developed ores during the sum-
mer months of 1914 and closed down.
