

F. F. JOHNSON CLAIMS

BALD MT. -

ELKHORN R.

ROCK CR. M. D.

ROCK CREEK MINING DISTRICT

Upon or close to the E.-W. contact of the granodiorite with the argillites there are many veins between the Mountain View, above mentioned, and the Baisley-Elkhorn, 6 miles farther east. The west branch of Rock creek was not visited, but it is reported that *F. F. Johnson* has claims located on an E.-W. vein in argillite, 300 feet from and parallel to the granodiorite outcrop. It is said that a shoot of good grade ore 8 to 10 feet wide, but of short stope length, has been encountered.
