Burnt River Mine
Nets Gold, Test Run

More than 300 ounces of gold was brought to Baker Friday by the Oregon Mining company as a result of an eight-day clean-up operation on Burnt river near Bridgeport. The gold was shipped to the government assay office at Seattle.

Eighteen men were continuously employed on this mining project operating in three 8-hour shifts, with a dragline doodlebug. Work on the operation will be resumed after January first.
The property of the Oregon Mining Company on Burnt River near Bridgeport, Oregon, which has been idle for the past year, has been reopened by H. Glaspel and Al Carvin of Bridgeport on a partnership basis. The former company operated a dredge on the Burnt River and handled 2,000 yards of gravel daily.

Baker
The Oregon Mining Co., operating placers in Burnt River Canyon, between Bridgeport and Durkee, has been incorporated by the following: J. E. Angle, G. B. Walker, and C. R. Williams. Angle is also interested in placer claims on Pine Creek below Cornucopia.

One of the new dragline dredging companies to get into operation near Baker in the past few weeks, is the plant of the Oregon Mining Company which completed construction and started digging in October.

The plant consists of a one and one-fourth cubic yard shovel and washing plant built by the Universal Dredge Manufacturing Company of Denver, Colorado. The company controls several miles of the Burnt river canyon between Bridgeport and Durkee.

About one and one-fourths miles of the ground have been proven by testing by shafts and drilling. The Airplane drill equipment was used in drilling. These tests are said to have proved about a million yards of gravel that can be profitably handled with the possibility of a much larger yardage by further testing.

J. E. Angle, Route 9, Box 193, Seattle, Washington, is president and general manager. C. B. Walker, Moore Hotel, Seattle, is secretary. Home offices of the company are at 1926 Second Avenue, Seattle, and the mine postoffice, Bridgeport, Oregon.
River flats are from 200 to 400 feet wide, averaging test pits were put down with a caisson and checked no false bedrock. The ground was tested by 50 to feet depth.

Boulders are seldom more than 250 pounds in weight. Gold lies mostly within .5 feet of the bedrock. It is very coarse. The fineness is 850. There is no clay and 60 drill holes and averages 35 cents a yard. Seven test pits were put down with a caisson and checked the drilling.

Oregon Mining Company — This company is reported as having entered into a contract with Carl LaConto to dig the gravel for the company’s dredging operation on Burnt river. Mr. LaConto has ordered a new 2-yard Marion shovel which will be used in the operation. The shovel is expected to arrive in Baker in about 10 days. A. A. Lystle of Baker, was instrumental in bringing about the arrangement which has the purpose to bring this company into operation after being closed the greater part of the summer.

The Oregon Mining Company is employing 18 men on a three-shift daily basis in its dredging operations on the Burnt River near Bridgeport, Oregon. A recent clean-up of an eight-day run is stated to have yielded over 300 ounces of gold. J. E. Angle, Route 9, Box 193, Seattle, Washington, is president and general manager. Equipment used includes a Northwest dragline with 1½-yard bucket and dredge built by the Universal Dredge Manufacturing Company.

The dredge of the Oregon Mining Company on the Burnt River near Bridgeport, Oregon, is reported to have capsized in 15 feet of water. The company had started to resume work, the dredge having been in operation only a few hours when the mishap occurred. No lives were lost. The damage and cost of raising the dredge is estimated at $2,000. When in normal operation the company, J. E. Angle, Route 9, Box 193, Seattle, Washington, president, employs about 18 men in three shifts and handles 2,000 yards daily.

New and heavier equipment will be purchased by the Oregon Mining Company, J. E. Angle, Route 9, Box 193, Seattle, Washington, president and manager. The company had been operating a dredge on the Burnt River near Bridgeport, Oregon employing around 18 men and handling 2,000 yards daily, until its dredge sank in 15 feet of water last January. Machinery has been raised and overhauled and the company will soon return to normal production.

Dredge Sticks. The Oregon Mining Company operating a dragline dredge on Burnt River below Bridgeport had one of the problems in January that give miners gray hair. The boat sank in ten feet of water in the dredge pond and turned on its side. The job was to pump the water from the pond and right the boat. The job has been completed and operations will be resumed as soon as electric motors on the boat have been repaired. Nils Christensen, of Baker, was in charge of the work.
