Note on positive deposit near Prineville

October 10, 1947

Mr. Chester K. Sterrett
Industries Department
Portland Chamber of Commerce
Portland, Oregon

Dear Sir:

We are enclosing a sheet of Laucks Laboratories showing aluminum potassium and silicon and thought that the silicon could be used with Alcoa ore to make steel.

We have a large deposit 30 miles from Prineville, Oregon. It can be mined with shovel.

Highway No. 28 will run within 6 miles of it. There is a good road to it now if you are interested.

We can send samples within a day or two.

Yours truly,

M. L. Page
2413 6th St.
Prineville, Oregon
