Canyon District

Canyon Area

"Located 1000 feet south of the Haggard and New mine and 300 feet higher, in NW $\frac{1}{2}$ of sec.21, T.14 S., R.32 E., Grant County. The country rock is a rather massive aphanitic dunite, somewhat faulted and jointed but not badly sheared.

"A short tunnel and a parallel open cut 10 feet to the west extend due south into the hill for about 30 or 40 feet, and expose ore 3 or 4 feet wide which appears to strike a little north of west, and which dips gently to the north. High-grade ore (assaying 51 percent chromic oxide) and probably 3 feet thick, is exposed along the strike for at least 15 feet, and for 25 feet along the dip. Some ore is exposed at a lower level and may be another kidney.

"The deposit is located on a very steep slope, 1000 feet from the nearest road (at the Haggard and New). Timber and water are abundant."
