EQUIPMENT ON PROPERTY

The Bowman Mine, the former Molybdenite Mine, was relocated by Mr. Bowman in the summer of 1940. It consists of one claim and is located about one mile west of the Tempest Mine in sec.1, T.10 S., R.34 E.W.M.

The mine was originally located by Sim C. Richardson in 1916, who sold it to the Pacific Molybdenum Mines, Inc., of Watertown, New York.

Equipment at the property consists of 3 cabins in good condition, 3000 feet of 3-inch cast iron pipe, one 25 h.p. and one 35 h.p. gasoline engine, and a small compressor.

The country rock is a biotite quartz diorite. Molybdenite occurs in narrow ^{quartz} veins which strike northeast. The tunnels are caved.

Informants: Sim C. Richardson and Otto Simons 10/22/40.
