

## F. X. GAUTHIER CLAIM

QUARTZBURG  
DISTRICT  
COPPER VEINS

---

*F. X. Gauthier*, about three miles north of the Standard mine, is developing an altered volcanic tuff along the side of an intrusion of magnetiferous feldspathic porphyry.

The ore minerals occur in small veins in what is locally called a dike, but is probably an altered and shattered contact of the porphyry with the fragmental volcanic rock.
