EQUIPMENT ON PROPERTY

LAST CHANCE MINE (Gold-Silver)

Cable Cove Area

Other name: This may be same as "Granite Group", in part, Bull.14-A 38:19
(which see).

"The Last Chance Mine is located in sec.14, T.8 S., R.36 E., upon a probable northeastern extension of the veins of the Imperial Mines. There are several veins in the Last Chance ground, but the one to which attention was directed in 1914 is on the Last Chance claim. The vein is developed for 400 to 500 feet by a drift upon it.

"The mineralization in this narrow vein is similar to others in this district. The maximum width of the ore is probably no more than 18 inches, and the greatest stope length of the shoots does not exceed 50 feet. The ore so far opened up, taking into consideration its width and nature, is not sufficiently high grade to pay operating expenses". Inactive in 1938.
