

HOMESTAKE CLAIM (manganese)

Lake Creek area

see Daly pits

"Red tuff with soft manganese oxides in small cracks and cavities is exposed in two places. No ore is developed.

"Location: sec. 5, T. 36 S., R. 2 E.

"Authority: Pardee (21:221) reports as follows:

"The Homestake claim of I. C. Daly is about a mile west of the Nichols prospect, on a gentle south slope at an altitude of about 2200 feet. It is underlain by a red tuff much like that at the Tyrrell mine, and in two places pits show soft manganese oxides in small cracks and cavities. No ore is developed."

"Hodge (37:15) reports on the Daly pits, in sec. 5, T. 36 S., R. 2 E., north of Salt Creek, and states that the pits 'were not in actual manganese ore, but were for the sole purpose of establishing claims in case some ore was found in the vicinity.' As nearly as can be determined the Homestake Claim of Pardee is the same as the Daly pits of Hodge."
