War Eagle Mine

Extra reports by Schmette  
in mine file

Mining Journal  
Phoenix, Ariz

### Oregon

Operations at the War Eagle mine north of Beagle, Oregon, at present are centered on the coal vein. An attempt also is being made to separate the coal from the cinnabar by flotation, but as yet no results are reported. No operations are being carried on in the Ramier vein. Lewis T. Lee of Beagle is superintendent.

The old **War Eagle** quicksilver mine in the Meadows district near Gold Hill, Oregon, is being reopened by the **Mineral**

**Mines, Inc.**, of Seattle, Washington.

C. O. White of

Seattle is superin-

tendent in charge at

Gold Hill. Workings

are being retim-

bered, a compressor has been installed, and several new buildings and a saw mill are under construction. A 50-ton retort designed by White is to be installed in the immediate future.

The Mining Journal February 15 1938

The first 50-ton unit of a proposed 200-ton reduction plant is being installed at the War Eagle quicksilver mine by the Mineral Mines, Inc. The property, located in the Meadows district of Jackson County near Gold Hill, Oregon, is being reopened and 1,000 feet of tunnel is being put into working condition. The company has completed 300 feet of new tunneling in its Power mine in the same district. C. O. White of Beagle, Oregon, is superintendent in charge

Gold Hill  
Jackson

It has been found that jigs and flotation are required for concentration of the cinabar-bearing ore of the **War Eagle Mine, Inc.**, at Beagle, Oregon. Last fall the ore was handled by a simple grinding and table process, but after a 60-day test run it proved to be inadequate. The property is an old producer, which has been inactive until last year. Lewis T. Lee of Beagle is superintendent.
