WRIGHT MINE (gold)

Upper Applegate area

"The Wright Mine 2 miles east of Applegate is near the south line of sec. 14, T. 38 S., R. 4 W., near Humbug Creek. It is opened by two adits, the upper running 80 feet north in decomposed 'granite' to dense hard greenstone while the lower runs 150 feet north and thence 20 feet west; it enters in decomposed 'granite' which becomes harder as the contact is approached. At the turn, and beyond, the adit is in hard greenstone with quartz here and there apparently produced by replacement. No well defined vein is visible. The ore consists of mineralized greenstone containing free gold, galena, and sphalerite."
