March 12, 1987

Mr. David A. Gaunt
161 Daisy Mine Road
Sunny Valley, OR 97497

Dear Mr. Gaunt:

Thank you for sending the information for your Livingston property in Josephine County, Oregon.

While some of the evidence of mineralization is interesting and might well warrant further prospecting, I'm afraid we would not be interested in pursuing this further at this time. That decision is not based so much on any negative assessment of the potential of your claims, as it is on our commitments to a few existing projects and the resultant curtailment of "grassroots" ventures or acquisitions.

Again, thanks for thinking of Sunshine Mining Company, and the best of luck in your further efforts to explore and develop these claims.

Sincerely,
SUNSHINE MINING COMPANY

REC'D FEB 19 1987

2-16-87
3/4/87

Dear Sir:

We are enclosing the following information about two groups of claims that we own.

The property has a very large volume of low grade ore and also areas of high grade ore as mentioned in the enclosed report. We are attempting to work the high grade ore shoots, but do not have the financial resources to work the massive low grade deposits.

The Thompson Group now consists of the 3 twenty acre lode claims with the addition of a 5 acre mill site claim. The group is otherwise much the same as it was when the Gains Report of 1931 was made. Additional mining was not accomplished do to WWII. Financial problems during the 60's and 70's of the lessee prevented further development. The access roads to the claims have been rebuilt and are in good condition and are maintained by BLM. Electrical power and phone lines are now within a mile of the claim.

We also own 3 twenty acre lode claims adjoining to the north which are on the 2 veins mentioned in the enclosed report.

We also have assay reports showing low grade platinum(.04 oz/ton) located between the 2 veins in the serpentine. We believe additional assays will show large areas of ore which could be mined for platinum. The person previously working these claims was being paid for the platinum in the concentrates as well as for the gold, which to us indicates significant ammounts of the platinum group metals are also in the vein material.

We are currently doing assays on other surface areas of these claims that to date show values of .2-.5 for gold.

We sincerely hope that this report is complete enough for you to investigate the potential of this property.

Sincerely,

David A. Gaunt

Mr. Ben L. Schultz
Clyde Hotel
Portland, Oregon

Dear Mr. Schultz:

RE : LIVINGSTONE MINE

In reply to your letter of March 29th, I will say that in its present stage of development the Livingstone Mine is not of interest to my principals.

I had understood that it was going to be possible to see the vein in open cuts that were to have been cleaned out. All that I was able to inspect was a short segment of vein in the main workings; without a chance to see surface exposures, it is impossible to arrive at any conclusion regarding the possible continuity of the short shoot inspected.

Yours very truly,

RK:CH

December 1, 1939

Fowlend King E.M.
Symons Building
Spokane, Washington

My dear Mr. King:

Due to the S. E. C. Federal laws concerning mining corporations, we Incorporated the Livingston Gold Corporation for \$90,000 divided into 90,000 shares at par value of \$1.00 each. Our reason in so doing, also besides not coming under the jurisdiction of the S.E.C., we would not contemplate selling our stock.

Of the 90,000 shares 65,000 were issued, leaving 25,000 shares in the treasury. In my letter to Bob Hardy I explained price and terms. A reasonable payment down should be made if and when our showings justify this, which we have absolutely no doubt about. It is just one of those few properties that you will put your 100% approval on.

As to the Spotted Fawn map, this is erroneous. It should have been "Livingston", although the vein opened up now is on that claim known as Spotted Fawn.

When I make the statement I have made to you, I feel positive that you will feel the same as many other mining men have in the past, be they engineers or just hard rock moners. This property is just one outstanding gold mine taken out of millions of so called prospects.

If you will advise me as to time, when you want to leave and how you are coming, one of us will be undoubtedly ready to go down with you. However, it will not at all be necessary since Frank Livingston is right there at the property, or 2 miles from it, and can show you the mine in less time than it would take for some one not so familiar with the property. In case you would drive your car through from Spokane you would stop, naturally, in Portland, and I would see you here, providing I know the time that you would

Rowland King -2-

be here. On the other hand, if you took the train, Southern Pacific, you would be getting off at Wolf Creek Station on this railroad, and we could have a car there to meet you and take you on through to the mine. No doubt you would arrive at Wolf Creek during the early hours of the morning, but we will know before hand so as to make arrangements to get you there.

I will await your further reply and only hope that you will take the time to investigate this property.

Yours sincerely,

Ben L. Schultz
Ben L. Schultz

BLS/ER

Portland, Oregon. 12/1st. 1939

Dear Mr. King:-----

Saw the Sunshine Co. be interested in a proven
Cinnabar Mine, that is now ready for a 40 to
50 Ton Furnace!

25000 Tons opened with 3 shafts 100 feet ore
about 30 feet all paralling. vein 10ft wide.

Another vein of same width traceable for
4200 feet has never been touched.

This lies in Lake County Calif. and is known
as the Old Baker Mine.

The 3- 100ft shafts are all connected on 100 ft.
level. I have Reports Maps etc.

You can make both investigations should you
care to interest Mr. Leisk.

Here is a Miner 900 Tons ore dump now
ready for Retort.

Requires a very reasonable payment down
bal. on straight royalty.

Set me hear from you.

Sincerely

Ben L. Chubb

December 7, 1939

Mr. Ben L. Schultz,
310 Oregon Bldg.
Portland, Oregon.

Re- Livingston Gold Corp.

Dear Mr. Schultz,

Upon my return here late yesterday I found your two letters of the 1st. inst.

As I understand it you have 25,000 shares of stock of the above company in the treasury out of a total issue of 90,000 shares. In your letter of November 12th to Mr. Hardy you say: "Requires a small cash payment and 10% royalty until paid. Price \$150,000 ~~cash~~" It is not clear to me how the Livingston Gold Corp. fits into this-- does it own any part of the property, acquired by issuance of part, or all, of the 65,000 shares? Does the \$150,000 pay for the entire property and what does the purchaser get in the way of an equity? How much is the cash payment mentioned? I will appreciate it very much if you will give me complete details on this phase of the subject.

Re- the mercury property; if you care to furnish me with all data on this I will discuss the matter with Mr. Leisk and advise you.

Yours very truly,

cc R.D.Leisk.

November 29, 1939

Mr. Ben L. Schultz,
310 Oregon Building
Portland, Oregon.

re- Livingston Gold Corp.

Dear Mr. Schultz,

I acknowledge receipt of your letter of the 27th inst. together with the report and map on the Spotted Faun property of the above named corporation.

Before going further with this matter will you kindly give me some details regarding the corporation, its capitalization, shares in treasury and what your proposed deal may be. It is important that we be advised regarding this phase of the subject before making an examination.

The report was received this morning and I have not had a chance to study it yet, this I will do as soon as possible and will then advise you of what interest it may have for us.

Yours very truly,

cc R.D. Leisk.

310 Oregon Building

November 27, 1939

Mr. Rowland King E.M.
Symons Building
Spokane, Washington

My dear Mr. King:

Have your letter of November 24th.

I am mailing you under separate cover reports and maps pertaining to the Livingston Gold Corporation property which is by itself explanatory.

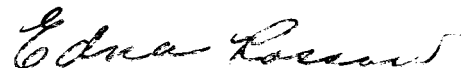

The property, of course, in question does not lie in the Baker quadrangle, however, is one property I would like to have you see. We can drive right to the property and it is easily examined. I think you could do this practically in a day, although the days are short now and it may take you a little longer. If you were coming at once could you come as soon as possible, for everything is open now and before I make other plans with this mine.

Knowing you and your ability, as I personally do, I will abide by your findings and really hope that you go and look at it yourself. If you are not interested please return them to me.

With best wishes, I am.

Sincerely yours,

Ben L. Schultz

BLS/ER

November 24, 1938

Mr. Ben L. Schultz,
310 Oregon Building
Portland, Oregon.

Dear Sir:-

Your letter of November 12, 1938, addressed to Mr. R. M. Hardy, President of Sunshine Mining Co., together with a copy of his reply to you and also your letter of November 18th to Mr. R. D. Leisk, manager for the company, have all been referred to me by Mr. Leisk.

No doubt you have copies of reports, maps, assay results, production records, etc. relating to the property mentioned. If you care to submit this material to me, making it as comprehensive as possible, it will enable us to decide about what interest it may have for the Sunshine Company.

At this time we know nothing about your mine, neither the name or the exact location, although your reference to the Greenback Mine might indicate the Baker, Oregon territory.

As I am representing Mr. Leisk in this matter I will be pleased to have you reply directly to me.

Yours very truly,

cc R.D. Leisk.

My dear Mr. Hardy:

Recently I stumbled on to another
 Sunshine Mine, all Gold instead
 of Silver. I can keep a 25 Ton busy
 every 24 hrs. Mr. H. Gainer of
 the South Dakota School of Mines, gives
 in his report approximately \$330,000.⁰⁰
 in Gold on to date. I am 8 mi from the
 Southern Pacific R.R. siding. I am 2 1/2
 mi. from the Greenback Mine, on the
 same veins, and which had a pro-
 duction record of over \$2,500,000.⁰⁰ quit
 at 1200 ft. but still in on. My ore runs
 a little better than 65% free. Much
 Telluride is now coming in. Requires a
 small cash payment, and 10% Royalty
 until paid. Price \$150,000.⁰⁰ all ready to go
 into production. Am getting Permit to sell
 stock this week. I have this States Minnologists

R. S. Leisk
Kellog, Idaho
General Manager Sunshine Mine

My dear Mr. Leisk:

On November 12th I wrote a letter to Mr. Bob Hardy, president of your Company.

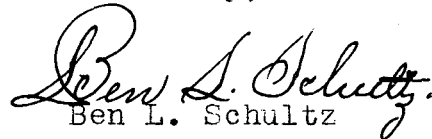

Mr. Hardy informed me by return mail that he had mailed my letter to you and any further communication I should take up direct with you.

It is possible that you have been too busy to observe what I had written, Bob. On account of this nice weather I wish that you would give this matter your most serious consideration, for I think I have just another Sunshine with only one difference--ours is Gold here, yours Silver.

Send your best man that you can find to make this investigation for I feel you will make no mistake in doing so. The climatic conditions around our property is most favorable for 365 days work out of each and every year.

May I hear from you at your earliest convenience. My best regards and our best wishes to you, I am,

Sincerely,

Ben L. Schultz

ACME ENGINEERING SERVICE

C.M.Lindberg, C.E., Manager

501 Porter Building

Portland, Oregon

Oct. 11, 1939

Mr. Ben Schultz

Portland, Oregon

Dear Mr. Schultz,

In June I inspected the Livingston Mine near Wolf Creek in Southern Oregon. I cut four scout samples from the ore exposures which were assayed by Louks Co of Seattle. Two of the samples proved to be in commercial ore and indicate what may be expected when mining the present known ore shoot.

It would be necessary to sample the mine systematically in order to arrive at a definite value for the property but my samples show that there is commercial ore of considerable extent on the property and that a development program consisting of sinking and drifting is fully justified. I would expect the ore to consolidate into a more regular and richer vein as soon as the workings get below the surface movement. I recommend that a winz be sunk from the main tunnel at a point under my sample no 150 C. This winz will be in ore and I would expect it to pay for itself in ore produced when there is a way to process the ore.

I have studied a report on the property by WmH. Gaines dated August 20th 1931 and while I have no way of checking the individual samples he took I believe that his report is correct as to tonnages and values except that some of the ore in Block A has since been mined. I note that the assays have been refigured at the \$35.00 price for gold although the samples were taken

before the rise in price.

From the geology of the district and a study of the walls of the veins as well as the veins themselves I would expect the mineralization to have a far greater extent both vertically and horizontally than is shown by the present development.

The development of the property is fully justified and with good management should be a profitable venture.

Yours truly,

W.L. Merritt B.S. F.M.

THE CALIFORNIA OREGON POWER COMPANY

Grants Pass, Oregon

October 19, 1939

Mr. Ben Schultz
310 Oregon Building
Portland, Oregon

Dear sir:

This will acknowledge receipt of your letter of October 18, and we have prepared an estimate as to the cost of your obtaining electric power. In making an estimate of this type, the Company figures the entire job in detail and asks that the customer advance in cash the cost of labor in erecting and removing the line plus a small amount for salvage.

In this particular case, there is 5.5 miles of new line to build, the installation of a substation at the mine, the stringing of a third wire from Wolf Creek to Glendale, and the clearing of right of way. All in all, the total cost of this construction would amount to approximately \$10,000, of which the up and down cost amounts to \$4520.00. This amount would have to be advanced in cash before construction could be started, and as this is only a rough estimate, the estimate may vary one way or the other. We have included in this amount a figure of \$1100 for clearing right of way which could be deducted if you wish to do this work yourself.

The money which is advanced can be rebated to you starting with the thirteenth month of operation at the rate of 20% of the monthly bills until the advance is fully paid back. However, in no case will rebates be made after a period of ten years.

I am hereby listeng, for your information, approximate cost of operation for 50, 75 and 100 hp. In figuring these estimates, we have used round figures, and if a plant can be run for longer periods each month the consumption of energy would be increased, thereby bringing more of it in the secondary rate.

January 25, 1938

Mr. Robert Livermore,
North American Mines Inc.,
75 Federal Street,
Boston, Mass.

Dear Mr. Livermore:

In November of 1937 your Engineer, Mr. W. Spencer Hutchinson, Jr., made an examination of the Spotted Fawn Mine owned by Mr. Frank C. Livingstone of Wolf Creek, Oregon.

The State Department of Geology and Mineral Industries is collecting information on all of the mines in Oregon and would greatly appreciate it if we could get a copy of the Assay Plan and Underground Workings of the Spotted Fawn Mine.

We will gladly reciprocate in any way we can.

Very truly yours,

J. E. Morrison,
Mining Geologist.

Wolf Creek Ore
Feb. 23-38

Mr. J. E. Morrison
Grants Pass, Ore

Dear Mr. Morrison,

Enclosed find note you
wished signed.

I must again say, that to make
an official registration of Hutchinson's
report is very unfair to mine &
should not be recorded.

In a careful checkup of his cuts,
I find 40% were made in wall
rock & not ore and another 25% were
made in gouge. None of this would
ever enter into milling and to
record a bunch of samples that
show nil & trace will do an injury
to the property, that neither you or
I could ever overcome.

I much prefer Gaines maps & report
for it is reliable.

I would like to have a talk with you
before you send this request, as I can
explain better.

Yours Truly
J. E. Livingstone
