

September 18, 1946

Dr. C. J. Moser
1105 Lawridge
Grants Pass, Oreg.

Dear Dr. Moser:

Enclosed is a short report on the visit I made to your property the afternoon of Sept. 12, 1946. It should be borne in mind that my visit was a short one and only reconnaissance in nature. I believe the report covers most points brought up by you but if I have neglected to mention anything which you may have questions about I will be only too glad to answer them to the best of my ability.

In regards to competent engineers, the following is a list, anyone of which I feel would be able to handle the job satisfactorily. Naturally I would hesitate to recommend any special one.

In this vicinity:

1. Erle C. Annes, 605½ G St., Grants Pass, Ore.
2. Daniel C. Beyer, Grange Hall Road, Grants Pass, Ore. (Mr. Beyer is an E.M. for Alaska Goldfields and is now in Alaska. His family lives in the Grants Pass area and I believe he could be easily persuaded to come here for a visit with them.)
3. D. Ford McCormick, Medford, Oregon
4. Dr. Lloyd W. Staples, Department of Geology, Univ. of Oregon, Eugene, Oreg. (Dr. Staples is connected with the dredge up Sucker Creek which I referred to.)

All these men are familiar with this territory and as a result would be able to draw from their former experiences here. Also, with the exception of Mr. Beyer they are readily available.

In Portland:

1. Carl M. Anderson, 3006 S. W. Woodward
2. W. M. Collins, Flett Bldg.
3. R. E. Mahblen, 808 Couch Building
4. James Orr, c/o Charlton Laboratories, 2340 S. W. Jefferson
5. S. J. Rosenber, Postel Bldg.

In San Francisco: (there are a great many, of course, but according to your needs I am suggesting two)

1. C. W. Schuette, 204 Sharon Bldg.
2. S. N. Wissler, 204 Sharon Bldg.

I am at loss to suggest anyone from Seattle but if you would care to pursue the matter further I would suggest writing to Dean Milnor Roberts,

page 2 of letter to Dr. C. J. Moser, Sept. 18, 1946.

mining Department, University of Washington.

If and when you do dig test pits on your property I would appreciate it if you would notify me so I could look them over. It is very possible that they would contain valuable geologic information which would be to the states advantage to have on file.

sincerely,

H. M. Cole
