

March 24, 1941

Mr. Wendall Smith  
Klamath Brick and Tile Co.  
Klamath Falls, Oregon

Dear Mr. Smith:

Under separate cover I am forwarding you a copy of the thesis prepared by Mr. Wilcox. This is my only copy and I would appreciate having it returned. I am asking Mr. Lewis to send you any information he may have on pumice in Southern Oregon.

Mr. Lewis will start work on your pumicite material in the near future. We examined it under the microscope this morning and find that it contains considerable diatomite, but principally is composed of glass shards characteristic of tuff deposits.

With best wishes, I am

yours very truly,

RCT:LR

Ray C. Treasher,  
Field Geologist
