Sulfur

1.5 to per 5 miles

March 22, 1968

Mr. Bobb Cassel  
Gilchrist, Oregon 97737

Dear Bobb:

We are gathering geologic information from all sources from Klamath and Lake counties to try to evaluate the mineral potential.

We have found a well log from a well drilled for the Gilchrist Lumber Company in sec. 19, T. 24 S., R. 9 E., that reports sulfur seams in blue-green lava from 131' to 137'.

This may have no significance but if it is convenient could you check your record there to see if you have any further information about the sulfur reported from this well.

Best regards,

Norm Peterson
