

GAYLORD PROPERTY

Paisely District

Lake County

Owners: Unknown. Property said to have been sold to men from Medford or Grants Pass this spring.

Location: Head of Brattain Canyon in the NW. $\frac{1}{4}$ of sec. 11, T. 34 S., R. 18 E.

Development and Geology: In an area of perhaps $\frac{1}{2}$ square mile there are three tunnels varying from 30 to 200 feet in length, and at least seven shafts with depths estimated from 10-40 feet. There are also numerous smaller pits and crosscuts. All of these, with the exception of one tunnel, are now caved completely and are inaccessible. This tunnel consists of a crosscut 115 feet S. 40 W. intersecting a vein N. 60 W. which has been developed for a distance of 70 feet. This vein dips 85° to the northeast and is composed of a mineralized zone from 2-4 feet in width with well-developed slickensides, gray clay gouge, much hematite and limonite quartz in vugs, and massive ^{quartz} containing galena and sphalerite and secondary lime. ^{#1} The country rock is a medium-grained gray andesite. The quartz is from 6 inches to 2 feet in width. From the alignment of the workings the vein systems explored appear to be at least 3 in number and to strike N. 10° W. rather than N. 60 W. It is possible that the vein in the tunnel is a cross vein. Overlying the andesites in this district are large cliffs of andesite agglomerate above. There are also indications of a white rhyolite flow.
