WITHERS PROPERTY

• Paisley Dist.

Lake Co

Owner: Withers Bros.

Location: Middle of sec. 15, T. 33 S., R. 17 E.

Several shallow cuts across a river a few hundred feet above the Summer Valley floor expose bull quartz veins up to three feet in width striking northwest and dipping  $60^{\circ}$  N.E. to  $60^{\circ}$  S.W. At one place another similar vein lies at right angles to these. Country rock is amygdaloidal andesite, porphyritic andesite, and andesite agglomerate. The quartz is apparently barren except for some green stain. There is very little iron oxide. The small amygdaloids in the andesite are also green.

Samples At three localities all assay Nil.
