

*Bohemia  
District*

January 15, 1979

Mr. Rick Strelff  
President Metal Mining Company  
P. O. Box 44  
Culp Creek, Oregon 97427

Dear Mr. Strelff:

I have visited the Bohemia District on only two occasions and have not examined the El Capitan (President) Claims. References used for the summary report in DOGAMI Bulletin 61 are listed on page 316 and in the Bibliography, p. 325 too. There may be some additional information in the mine files at our Portland Office; but I rather doubt it.

The work by Callaghan and Buddington, 1938, is generally the most complete for deposits in the area. I believe most of the references are available in the University of Oregon Library.

The map, Plate 3 in the pocket of Bulletin 61 shows the main veins striking northwesterly; but it appears quite possible that one of the northeast-striking veins mapped nearby to the northeast may intersect the President Vein.

I am sending a copy of your letter to Mr. Jerry Gray in our Albany office who has done some more recent work in the area in case he can supply you with information that may be helpful.

Sincerely,

Len Ramp  
Resident Geologist
