INTRODUCTION

The purpose of the Areas of Critical Environmental Concern (ACECs)/Research Natural Areas (RNAs) baseline study is to document any ACECs, as defined in 43 United States Code (U.S.C.) 1702, or RNAs near the Grassy Mountain Mine Project (Project). This baseline report will be included in the Consolidated Permit Application (Oregon Administrative Rule 632-037-0055) submitted to the Oregon Department of Geology and Mineral Industries.

RESOURCE STUDY AREA

The Project is located in Malheur County, Oregon, approximately 22 miles south-southwest of Vale (Figure 1) and consists of two areas: the Mine and Process Area and the Access Road Area (Permit Area) (Figure 2).

The Mine and Process Area is located on three patented lode mining claims and unpatented lode mining claims that cover an estimated 886 acres. These patented and unpatented lode mining claims are part of a larger land position that includes 419 unpatented lode mining claims and nine mill site claims on lands administered by the Bureau of Land Management (BLM) (Figure 2). All proposed mining would occur on the patented claims, with some mine facilities on unpatented claims. The Mine and Process Area is in all or portions of Sections 5 through 8, Township 22 South, Range 44 East (T22S, R44E) (Willamette Meridian).

The Access Road Area is located on public land administered by the BLM, and private land controlled by others (Figure 2). A portion of the Access Road Area is a Malheur County Road named Twin Springs Road. The Access Road Area extends north from the Mine and Process Area to Russell Road, a paved Malheur County Road. The Access Road Area is in portions of Section 5, T22S, R44E, Sections 3, 10, 11, 14, 15, 21 through 23, 28, 29, and 32, T21S, R44E, Sections 1, 12 through 14, 23, 26, 27, and 34, T20S, R44E, Sections 6 and 7, T20S, R45E, and Sections 22, 23, 26, 35, and 36, T19S, R44E (Willamette Meridian). The width of the Access Road Area is 300 feet (150 feet on either side of the access road centerline) to accommodate possible minor widening or re-routing, and a potential powerline adjacent to the access road. There are several areas shown that are significantly wider than 300 feet on the Permit Area Map (Figure 2), which are areas where the final alignment has not yet been determined. The final engineering of the road will be consistent throughout, and within the Permit Area. The Access Road Area also includes a buffer on either side of the proposed road width for the collection of environmental baseline data. The road corridor will be 40 feet wide, which includes a 24-foot wide road travel width (12 feet on either side of the road centerline), four-foot wide shoulders on each side of the road, minimum one-foot wide ditches on each side of the road, and appropriate cut and fill. The Access Road Area totals approximately 876 acres.
3 REGULATORY FRAMEWORK

3.1 Federal

3.1.1 Federal Land Policy and Management Act of 1976

The Federal Land Policy and Management Act of 1976 (FLPMA), as amended, defines the term ACEC as “areas within the public lands where special management attention is required (when such areas are developed or used or where no development is required) to protect and prevent irreparable damage to important historic, cultural, or scenic values, fish and wildlife resources or other natural systems or processes, or to protect life and safety from natural hazards” (43 U.S.C. 1702).

3.1.2 Bureau of Land Management

The BLM also designates RNAs to “preserve examples of significant ecosystems and provide opportunities for education, research, and collection of baseline data in relatively unaltered natural communities” (BLM 2018). BLM Manual 1613 – Areas of Critical Environmental Concern, states that RNAs are considered designated ACECs.

3.1.2.1 Southeastern Oregon Resource Management Plan

The BLM’s 2002 Southeastern Oregon Resource Management Plan and Record of Decision (SEORMP) provides the Vale District with a comprehensive framework for managing 4.5 million acres of public land administered as the Malheur Resource Area (MRA) and Jordan Resource Area. The SEORMP addresses land in Malheur, Grant, and Harney Counties in a larger 6.5 million-acre planning area that contains private land and land managed by the State of Oregon. The purpose of the SEORMP is to ensure that public land is managed for multiple use and sustained yield in accordance with the FLPMA. The Permit Area is in the MRA.

4 STUDY METHODOLOGY

4.1 Literature Review

The baseline characterization outlined in this report has been taken from a list and maps in the SEORMP identifying the ACECs/RNAs and ACECs in the MRA (BLM 2002).

4.2 Field Studies

Field studies were not necessary for this baseline study per the Environmental Baseline Study Work Plans (EM Strategies, Inc. 2017).

5 BASELINE CHARACTERIZATION

The SEORMP identifies 17 combined ACECs/RNAs and 11 ACECs in the MRA. These are shown on Figure 3 and listed in Table 1. There are no ACECs or ACECs/RNAs in the Permit Area. The closest ACEC or ACEC/RNA is the Owyhee River Below the Dam ACEC.

<td>3,154</td>
<td>Historic; scenic; a special status plant species, Cronquist’s stickseed.</td>
</tr>
<tr>
<td>Oregon National Historic Trail ACEC – Tub Mountain Segment</td>
<td>5,902</td>
<td>Historic; cultural; scenic</td>
</tr>
<tr>
<td>Owyhee River Below the Dam ACEC</td>
<td>11,239</td>
<td>High scenic values of diverse landscape elements in a substantially natural setting; a special status plant species (Mulford’s milkvetch); the rare presence of a black cottonwood gallery in a riverine system; the combined wildlife values of diverse habitat types supporting a large number of wildlife species and an important migratory corridor for neotropical birds.</td>
</tr>
<tr>
<td>Owyhee Views ACEC</td>
<td>52,506</td>
<td>High scenic properties associated with the area’s virtually unaltered landscape; special status bighorn sheep and habitat; special status plant species (Sterile milkvetch, Ertter’s senecio, and Owyhee clover). Another special status plant species (Cusick’s chaenactis) is suspected to grow in the area.</td>
</tr>
<tr>
<td>Palomino Playa ACEC/RNA</td>
<td>642</td>
<td>Shadscale saltbush/bunchgrass, black greasewood/bunchgrass community mosaic and bare playa; special status plant species, Davis’ peppergrass</td>
</tr>
<tr>
<td>Saddle Butte ACEC</td>
<td>7,056</td>
<td>Special status western big-eared bats and habitat, high quality lava tube caves; hazardous conditions due to cave instability</td>
</tr>
<tr>
<td>South Alkali Sand Hills ACEC</td>
<td>3,520</td>
<td>Special status plant species and their habitat.</td>
</tr>
<tr>
<td>South Bull Canyon ACEC/RNA</td>
<td>792</td>
<td>Big sagebrush-antelope bitterbrush/Idaho fescue</td>
</tr>
<tr>
<td>South Ridge Bully Creek ACEC/RNA</td>
<td>620</td>
<td>Big sagebrush/Thurber needlegrass community and big sagebrush-squaw apple/Idaho fescue community vegetation cell; sage grouse, loggerhead shrikes, and their associated habitat.</td>
</tr>
<tr>
<td>Spring Mountain ACEC/RNA</td>
<td>1,002</td>
<td>Mountain big sagebrush/Idaho fescue, low sagebrush/bluebunch wheatgrass, and riparian community dominated by peachleaf willow and coyote willow with quaking aspen/whortleleaf snowberry; quaking aspen patches associated with springs and north-facing talus slopes.</td>
</tr>
<tr>
<td>Stockade Mountain ACEC/RNA</td>
<td>1,767</td>
<td>Vegetation community type of western juniper/big sagebrush plus potential low sagebrush/Sandberg bluegrass type; wildlife habitat</td>
</tr>
<tr>
<td>Toppin Creek Butte ACEC/RNA</td>
<td>3,996</td>
<td>Low sagebrush/bluebunch wheatgrass community in excellent condition and low sagebrush/Idaho fescue community vegetation cells identified by the Oregon Natural Heritage Program. These plant communities will be specially managed for future research. Also identified as relevant and important values are sage grouse and associated habitat for neotropical bird migration.</td>
