#### **Oregon Seismic Status Report - 2018**

Oregon law requires school districts and education service districts to provide DOGAMI with notice of construction projects that may affect a school's seismic risk.

This report was generated by DOGAMI from submitted data.

#### 1.0 Executive Summary

The Imbler School District is located in Imbler, Oregon in Union, County. The District operates 2 Schools located within the community including the property of interest, Imbler High School approximately 60 miles East of Pendleton Oregon. The District has retained ZCS Engineering, Inc. (ZCS) to perform a seismic evaluation of Imbler High School that provides the District with an objective, comprehensive analysis of the condition of the building's seismic resisting systems. The purpose of the evaluation is to determine the seismic lateral resisting system deficiencies when compared to buildings designed using modern building codes. This evaluation was performed in accordance with the American Society of Civil Engineers "Seismic Rehabilitation of Existing Buildings ASCE/SEI 41-13".

Imbler High School is located at 6<sup>th</sup> and Esther Ave. in Imbler Oregon. The existing school building was constructed in 1975 as a free standing addition to the original school. The elementary building was then constructed in 2012 and all the original school buildings were demolished soon after. The 1975 high school building will be the focus of this report.

The building outlined in this report has a footprint of approximately 29,300 square feet. This building contains classrooms, a gymnasium, locker rooms, administrative offices, and a balcony fitness area. The classroom portion of the building consists of a plywood roof diaphragm and is supported by TJI trussed joists that bear on exterior and interior bearing walls. The gymnasium portion of the school is composed of a plywood diaphragm and is supported by 2X rafters. The rafters are supported by glulam beams that bear on exterior reinforced CMU pilasters.

Imbler School District serves to educate students from grades K-12 in Imbler, Oregon. The entire campus is occupied throughout the school year by approximately 300-400 students and staff. The high school facility houses approximately 150 students and staff for grades 9-12.

The evaluation of the facility indicates, rehabilitation of existing lateral system components are necessary to meet the requirements for Life Safety as outlined in ASCE 41-13. The following is a brief list of seismic deficiencies encountered:

- A well-defined lateral load path is not present.
- Interior and exterior CMU walls are not properly attached to the roof diaphragm for in-plane or out-of-plane loading.
- No out-of-plane connection at the top of CMU walls to keep the walls from separating from the roof framing resulting in collapse.
- The gymnasium is taller than classroom building. This creates a vertical irregularity.
   This vertical irregularity could result in pounding of the classroom roof diaphragm into the gymnasium wall. The pounding effects increase the buckling loads on the walls.

- The second floor mezzanine diaphragm is not properly attached to the shear walls below, inhibiting in-plane seismic load transfer.
- The interior gypsum shear walls below the lower roofs structure do not have adequate capacity to resist the prescribed seismic forces generated in the roof diaphragms.
- Seismic isolation between the gymnasium and the classroom wing is not present.

Recommendations mitigating the known deficiencies determined by our analysis are outlined in section 4.0 of this report. In addition to the rehabilitation recommendations, we prepared schematic seismic retrofit drawings to convey the intent of the rehabilitation effort. These drawings are included in Appendix E.

To help the District understand the magnitude of the rehabilitation effort and secure funding sources for the seismic system rehabilitation of the building, a preliminary construction cost estimate was developed. With the assistance of a seismic retrofit contractor a total construction cost of \$1,471,520 including all soft costs associated with architecture/engineering, permitting, and District Project Management was developed. Refer to section 5.0 of the report body.

In addition to the construction cost estimation efforts we performed a "Benefit Cost Analysis" using the tool provided by the State of Oregon Infrastructure Finance Authority. The building has a benefit cost score of 1.164. Refer to Appendix D for BCA worksheets.

It is our final recommendation that given the BCA score and the general condition of the seismic resisting systems, this building is an excellent candidate to be rehabilitated to meet the currently prescribed seismic demands for Life Safety per ASCE 41-13. Once rehabilitated, this building will meet the needs of the District and community for future generations.

#### 2.0 Project Introduction

Imbler School District is centrally located in Imbler Oregon in Union County. Imbler High School is located at 6<sup>th</sup> and Ester Ave. in Imbler, Oregon (Figure 1 – Vicinity Map).

The District has retained ZCS Engineering, Inc. (ZCS) to perform a seismic evaluation of Imbler School District. The purpose of the evaluation is to provide the District with an objective, comprehensive analysis of the condition of the existing seismic force resisting systems of the facility when compared to a building constructed using modern building codes. In addition to evaluating the building's seismic performance, schematic seismic retrofit plans have been developed. The rehabilitation plans have been developed using our extensive knowledge of seismic rehabilitation and are intended to meet the objectives and the level of performance of Life Safety based on the ASCE 41-13 requirements. Based on the seismic evaluation and schematic rehabilitation design drawings, a preliminary construction cost estimate was developed. Based on the preliminary construction cost estimate, a benefit cost analysis was prepared to help the District determine whether or not the rehabilitation efforts outlined in this report are financially responsible.

This work was conducted at the request of Mark Lanman, *Maintenance/Transportation Director* under an engineering services contract between the *District* and ZCS.

#### 2.1 Scope of Work

The following scope of work was developed to meet the objectives outlined above.

#### Seismic Evaluation & Preliminary Rehabilitation Services:

- Review original building construction drawings to determine existing structural systems and areas of concern
- Perform site visits of the structure to observe structural systems and visually review structural condition and deficiencies
- Observe lateral system (seismic) components and load path
- Observe gravity system components and load path
- Observe for damage and failing elements
- Verify original building drawings for use in developing schematic level as-builts.
- Evaluate existing construction based on visual observations and available asconstructed documentation against ASCE 41 Tier 1 requirements
- Collate findings and perform preliminary calculations to assist in the determination of each building's seismic deficiencies
- Prepare an evaluation report for the facility identifying the structural integrity and seismic deficiencies stamped by a registered Structural Engineer licensed in the State of Oregon.

#### **Preliminary Construction Cost Consulting Services:**

- Develop project base sheets based on the District provided original drawings.
- Prepare conceptual rehabilitation drawings based on ASCE 41 guidelines to convey the intent of rehabilitation recommendations
- Prepare a project cost estimate based on historic projects of similar scope and magnitude
- Review constructability and cost estimate with a licensed contractor
- Revise plans based on contractor input as required to optimize the efficiency of the rehabilitation plan and develop final construction cost recommendations
- Prepare cost benefit analysis based on SRGP methodologies
   \*Financial and enrollment information has been provided by the District
- Summarize findings in final report package stamped by a registered Structural Engineer licensed in the State of Oregon

#### 3.0 Structural Evaluation

#### 3.1 Introduction

ZCS was tasked with evaluating the lateral force resisting systems of the facility. The structures reviewed in our analysis include high school gymnasium/classroom building.

The Imbler High School building was constructed in 1975 as a free standing addition to the original school. The elementary building was then constructed in 2012 and all the original school buildings were demolished soon after. The 1975 high school building will be the focus of this report.

The building outlined in this report has a footprint of approximately 29,300 square feet. This building contains classrooms, a gymnasium, locker rooms, administrative offices, and a balcony fitness area. The classroom portion of the building consists of a plywood roof diaphragm and is supported by TJI trussed joists that bear on exterior and interior bearing walls. The gymnasium portion of the school consists of a plywood diaphragm and by 2X rafters. The rafters are supported by glulam beams that bear on exterior reinforced CMU pilasters.

Imbler School District serves to educate students from grades K-12 in Imbler, Oregon. The entire campus is occupied throughout the school year by approximately 300-400 students and staff. The high school facility houses approximately 150 students and staff for grades 9-12.

#### 3.2 Structural Evaluation

The following outlines the evaluation of the existing structural components of the building. The evaluation includes site observations of the existing structural elements and follows the guidelines outlined in the American Society of Civil Engineer's "Seismic Evaluation of Existing Buildings – ASCE 41-13". This manual is the required evaluation tool per the Seismic Rehabilitation Grant Program through Business Oregon Infrastructure Finance Authority. Per ASCE 41-13 a Tier 1 evaluation has been performed. The purpose of a Tier 1 evaluation is to provide "Quick Checks" to properly evaluate a building and determine deficiencies related to the lateral resisting elements.

It is the intent of the District, as part of this study, to determine the structural deficiencies of the building as compared to current prescribed loading and detailing requirements for lateral (wind/seismic) loading to a performance level of "Life Safety" per ASCE 41-13. The level of performance is defined per ASCE 41-13 as:

"Structural performance level, life safety, means post-earthquake damage state in which significant damage to the structure has occurred but some margin against either partial or total structural collapse remains. Some structural elements and components are severely damaged

but this has not resulted in large falling debris hazards, either inside or outside the building. Injuries may occur during the earthquake; however, the overall risk of life-threatening injury as a result of structural damage is expected to be low. It should be possible to repair the structure; however, for economic reasons this may not be practical. Although the damaged structure is not an imminent collapse risk, it would be prudent to implement structural repairs or install temporary bracing prior to reoccupancy."

Per ASCE 41-13 a seismic hazard level is required. In order to obtain a performance level of "Life Safety" the seismic hazard shall be BSE-1N as defined in section 2.4.1.2 and C2.4.1.2. The BSE-1N hazard level earthquake has a probability of occurring once in every 475 years, or 10% chance in 50 years. This design level earthquake has a similar rate of occurrence and magnitude as the current state adopted building codes. A 25% reduction in force is recommended by the grant committee. This follows the recommendation of the City of Portland City Code for the evaluation and rehabilitation of existing buildings per chapter 24.85. We feel this provides an appropriate level of performance for this facility.

Lateral resisting systems work in conjunction with gravity framing systems. As such, the existing gravity framing system was also reviewed for structural deficiencies during our site observations. Section 3.2.3 outlines the existing gravity system and its structural deficiencies found during the evaluation.

#### 3.2.1 Lateral Resisting Systems

After reviewing the facility and the existing drawings we have determined the lateral system is defined as Reinforced Masonry Bearing Walls with Flexible Diaphragms, RM1. Per ASCE 41 a RM1 lateral system is defined as buildings that have bearing walls that consist of reinforced brick or concrete block masonry. The floor and roof framing consists of steel or wood beams and girders or open web joists and are supported by steel, wood, or masonry columns. Seismic forces are resisted by the reinforced brick or concrete block masonry shear walls. Diaphragms consist of straight or diagonal wood sheathing, plywood, or unstopped metal deck and are flexible relative to the walls. The foundation system may consist of a variety of elements.

#### 3.2.2 Lateral Resisting Element Deficiencies

The following lateral resisting element deficiencies are based on visual observations of the existing structural elements and the structural analysis performed during the Tier 1 "Quick Checks" of the ASCE 41-13. The Tier 1 checklists are attached in Appendix B. The following outlines the deficiencies for each portion of the facility.

- A well-defined lateral load path is not present.
- Interior and exterior CMU walls are not properly attached to the roof diaphragm for inplane or out-of-plane loading.

- No out-of-plane connection at the top of CMU walls to keep the walls from separating from the roof framing resulting in collapse.
- The gymnasium is taller than classroom building. This creates a geometric irregularity. This geometric irregularity could result in pounding of the classroom roof diaphragm into the gymnasium wall. The pounding effects increase the buckling loads on the walls.
- The second floor mezzanine diaphragm is not properly attached to the shear walls below, inhibiting in-plane seismic load transfer.
- The interior gypsum shear walls below the lower roofs structure do not have adequate capacity to resist the prescribed seismic forces generated in the roof diaphragms.
- Seismic isolation between the gymnasium and the classroom wing is not present.

#### 3.2.3 Gravity Resisting Systems and General Observations

A non-formal structural review of gravity resisting elements did not reveal any deficiencies.

#### 3.2.4 Evaluation of Incidental Items

Incidental, non-structural items can play a major role in the overall expense of rehabilitating an existing building. These costs can be significant, and can be very difficult to estimate prior to construction.

- Proper attachment and bracing of storage racks/cabinets/books shelves over 4' tall or 3:1 (height:width) ratio
- Attachment of equipment over 20 lbs. and above 4', and all equipment over 100 lbs.
- Attachment of all emergency lighting, power equipment and associated wiring
- Bracing of overhead fluid piping and any gas piping
- Verification/installation of emergency shutoff valves for gas utilities
- Hazardous material mitigation (floor tiles, roofing, ceiling tiles, etc.)
- Suspended ceiling seismic bracing at exits
- HVAC units should be evaluated for stability under seismic loading.

Based upon ZCS's previous experience and discussions with site personnel the building contains some form of hazardous material. These materials will need to be dealt with on a case-by-case basis as they are encountered during the project.

#### 4.0 Seismic Rehabilitation Recommendations

The following structural improvements are required to resolve the deficiencies noted in section 3.2. These improvements are detailed below and in the attached schematic seismic rehabilitation drawings found in Appendix E. These drawings were prepared to assist in defining the rehabilitation scope of work.

- Provide pony walls, blocking, clipping and nailing connections along top of CMU walls in gymnasium area and classrooms to establish adequate connection between top of wall and diaphragm
- The roofing shall be removed to allow proper attachment of the roof sheathing to blocking between the open web rafters. The roofing will be reinstalled.
- The tops of the perimeter walls for both the gym and classroom building need to be properly attached to the roof diaphragms for out-of-plane loading.
- To limit the aspect ratio of the roof diaphragm to code prescribed limits the existing
  interior cross walls will be sheathed with plywood on the existing wall framing. The
  existing gypsum interior finish will be removed and replaced over the plywood sheathing.
  The walls will be adequately attached to the existing foundation utilizing post installed
  anchors and attached to the roof framing using structural screws.
- The existing gypsum wall board will be removed in strategic locations and new plywood sheathing wall be installed to increase the shear capacity to resist the prescribed inplane seismic forces. Where required, additional anchor bolts shall be installed using post installed concrete anchors.
- The classroom building will be seismically isolated from the gym to minimize the pounding action and geometric irregularity.
- All piping and HVAC equipment found throughout the building shall be properly braced and attached to the structure to limit the potential damage.
- Any mechanical equipment weighing over 20 pounds shall be attached and properly braced
- Provide proper attachment and bracing for all non-structural components and equipment

#### **5.0 Preliminary Construction Cost Estimate**

The attached engineer's opinion of probable cost has been developed by ZCS for Imbler High School.. ZCS has a successful record of completing seismic rehabilitation projects within the State of Oregon. The prices provided in the attached cost estimate have been developed using the extensive list of past projects as a baseline for this project. These prices are based on Oregon BOLI wage rates. The cost estimate is broken down into multiple line items associated with each major task (general conditions, foundation, structural steel, MEP, etc) associated with the rehabilitation. Additional line items are included for design associated permit costs, and owner construction management.

Following the generation of the preliminary construction cost estimate line item costs, they were reviewed with a local construction company representative who has participated in similar construction projects. This representative is a highly qualified commercial contractor that has worked on multiple educational facilities and performed seismic retrofits to existing structures. They reviewed the values presented in the construction cost estimate, and provided insight into current construction costs from a contractor's perspective. The comments and insight provided have been included in the proposed construction cost estimate. The preliminary opinion of probable cost is **\$1,471,520**.

#### **6.0 Benefit Cost Analysis**

The provided benefit-cost analysis (BCA) included in Appendix D, has been prepared by ZCS using the BCA tool as provided by the State of Oregon Infrastructure Finance Authority. The costs associated with the building replacement value, contents replacement value, and occupancy values have been developed by District staff using recent data.

The building being addressed is part of an entire school campus surveyed during the state wide assessment of schools performed by Department of Geology, and Mineral Industries' (DOGAMI) Rapid Visual Screening (RVS) process in 2005 as part of senate bill 2. The building in question is part of part D of the RVS scoring provided by DOGAMI. The occupancy and budget data provided by the District is for the entire school. Only a percentage of these data points were used in the BCA calculation based on the square footage of building in question compared to the entire building square footage.

The BCA for this project is **1.164**. Given the BCA score of **1.164** is greater than 1.0 this project is a good candidate for the grant program.

#### 7.0 Conclusion and Recommendations

The findings described in this report have been limited to the lateral force-resisting structural system and general assessment of the gravity force-resisting elements. Based on our visual observations, we find the structure to be in good condition and generally safe for occupancy. No significant damage to the existing structural system was discovered.

Given the current condition of the structure, the current code section on existing buildings does not mandate that upgrades are required unless the building is scheduled for repairs, alterations, additions, or change in occupancy. However, it is our understanding the goal of the District is to continue utilizing the existing building as a facility for education, and the District wants the seismic structural system to be compliant with the current code. To clarify, upgrades outlined in this report are strictly at the discretion of the District.

We have attempted to identify all areas requiring upgrades to achieve a scope of work for current code compliance, associated estimated costs and project schedule.

Please contact our office if you would like to discuss our findings. Please review the attached schematic drawings that can be used to refine a scope and budget.

#### PROJECT NARRATIVE

"STRUCTURAL PERFORMANCE LEVEL LIFE SAFETY, MEANS POST-EARTHOUAKE DAMAGE STATE IN WHICH SIGNIFICANT DAMAGE TO THE STRUCTURE HAS OCCURRED BUT SOME MARGIN AGAINST EITHER PARTIAL OR TOTAL STRUCTURAL COLLAPSE REMAINS SOME STRUCTURAL ELEMENTS AND COMPONENTS ARE SEVERELY DAMAGED BUT THIS HAS NOT BESULTED IN LARGE FALLING DEBINS HAZARDS, EITHER INSIDE OR OUTSIDE THE BUILDINIS, INJURIES MAY OCCUR DURING THE EARTHQUAKE; HOWEVER, THE OVERALL RISK OF LIFE-THREATENING INJURY AS A RESULT OF STRUCTURAL DAMAGE IS EXPECTED TO BE LOW IT SHOULD BE POSSIBLE TO REPAIR THE STRUCTURE, HOWEVER, FOR ECONOMIC REASONS THIS MAY NOT BE PRACTICAL ALTHOUGH THE DAMAGED STRUCTURE IS NOT AN IMMINISH'T COLLAPSE RISK, IT WOULD BE PRUDENT TO IMPLEMENT STRUCTURAL REPAIRS OR INSTALL TEMPORARY BRACING PRIOR TO REDCCUENDANCY"

SEISMIC DEFICIENCES

THE LOAD BEARING WALLS ARE NOT PROPERLY ATTACHED TO THE ROOF DIAPHRAGM FOR OUT-OF-PLANE LOADING.

THE SHEAR STRESS IN SHEAR WALL EXCEEDS VALUES LISTED IN SECTION 4.5.3.3

JANAROW WOOD SHEAR WALLS WITH ASPECT RATIO GREATER THAN 2-TO-1 ARE RELIED ON TO RESIST SEISMIC FORCES

-WALLS WITH OPENINGS GREATER OF THAN 80% OF THE LENGTH ARE NOT BRACED WITH WOOD STRUCTURAL PANEL SHEAR WALLS.

THE ROOF DIAPHRAGMIS NOT CONTINUOUS AND CONSISTS OF SPLIT LEVEL ROOF.

-ROOF CHORD IS NOT CONTINUOUS DUE TO SPLIT TROOF LEVEL.

-DIAGONALLY SHEATHED DIAPHRAGM SPANS MORE THAN 40 FEET.

#### REHABILITATION RECOMMENDATIONS

WALLS
PROVIDE DRAG TIES BETWEEN BEAM LINES IN THE LONGITUDINAL DIRECTION TO CONNECT THE ROOF DIAPHRAGM TO NEW SHEAR WALLS
PROVIDE PROPER ATTACHMENT AND BRACING FOR ALL NON-STRUCTURAL COMPONENTS AND EQUIPMENT
-ALL PIPING AND HVAC EQUIPMENT FOUND THROUGHOUT THE BUILDING SHALL BE PROPERLY BRACED AND ATTACHED TO THE STRUCTURE TO LIMIT THE

| С (   | NC    | ) N/A   | U             | LOAD PATH: The structure shall contain a complete, well defined load path, including structural elements and connections, that serves to transfer the inertial forces associated with the mass of all elements of the building to the foundation. (Commentary: Sec. A.2.1.1. Tier 2: Sec. 5.4.1.1)                                 |
| C     | NC    | (N/A)   | U             | ADJACENT BUILDINGS: The clear distance between the building being evaluated and any adjacent building is greater than 4% of the height of the shorter building. This statement shall not apply for the following building types: W1, W1a, and W2. (Commentary: Sec. A.2.1.2. Tier 2: Sec. 5.4.1.2)                                 |
| C (   | NC    | N/A     |               | MEZZANINES: Interior mezzanine levels are braced independently from the main structure or are anchored to the seismic-force-resisting elements of the main structure. (Commentary: Sec. A.2.1.3. Tier 2: Sec. 5.4.1.3)   |
| Buile | ding  | Config  | urat          | tion .   |
| C     | NC    | (Ń/A)   | U             | WEAK STORY: The sum of the shear strengths of the seismic-force-resisting system in any story in each direction is not less than 80% of the strength in the adjacent story above. (Commentary: Sec. A2.2.2. Tier 2: Sec. 5.4.2.1)  |
| C I   | NC    | (N/A    | υ(            | SOFT STORY: The stiffness of the seismic-force-resisting system in any story is not less than 70% of the seismic-force-resisting system stiffness in an adjacent story above or less than 80% of the average seismic-force-resisting system stiffness of the three stories above. (Commentary: Sec. A.2.2.3. Tier 2: Sec. 5.4.2.2) |
| (c) 1 | NC    | N/A     | U             | VERTICAL IRREGULARITIES: All vertical elements in the seismic-force-resisting system are continuous to the foundation. (Commentary: Sec. A.2.2.4. Tier 2: Sec. 5.4.2.3)  |
| C (1  | NC)   | N/A     | U             | GEOMETRY: There are no changes in the net horizontal dimension of the seismic-force-resisting system of more than 30% in a story relative to adjacent stories, excluding one-story penthouses and mezzanines. (Commentary: Sec. A.2.2.5. Tier 2: Sec. 5.4.2.4)   |
| 9 1   | NC    | N/A     | U             | MASS: There is no change in effective mass more than 50% from one story to the next. Light roofs, penthouses, and mezzanines need not be considered. (Commentary: Sec. A.2.2.6. Tier 2: Sec. 5.4.2.5)  |
| (C) 1 | NC    | N/A     | U             | TORSION: The estimated distance between the story center of mass and the story center of rigidity is less than 20% of the building width in either plan dimension. (Commentary: Sec. A.2.2.7. Tier 2: Sec. 5.4.2.6)  |
| Mod   | eraț  | e Seisı | nicit         | ty: Complete the Following Items in Addition to the Items for Low Seismicity.  |
| Geol  | ogic  | Site H  | Iaza          | rds  |
| (C) 1 | NC    | N/A     | U             | LIQUEFACTION: Liquefaction-susceptible, saturated, loose granular soils that could jeopardize the building's seismic performance shall not exist in the foundation soils at depths within 50 ft under the building. (Commentary: Sec. A.6.1.1. Tier 2: 5.4.3.1)  |
| C 1   | VC.   | (N/A)   | U             | SLOPE FAILURE: The building site is sufficiently remote from potential earthquake-induced slope failures or rockfalls to be unaffected by such failures or is capable of accommodating any predicted movements without failure. (Commentary: Sec. A.6.1.2. Tier 2: 5.4.3.1)  |
| 1 6   | NC    | N/A     | U             | SURFACE FAULT RUPTURE: Surface fault rupture and surface displacement at the building site are not anticipated. (Commentary: Sec. A.6.1.3. Tier 2: 5.4.3.1)  |
| High  | Sei   | smicity | 7: <b>C</b> c | omplete the Following Items in Addition to the Items for Low and Moderate Seismicity.  |
| Foun  | dati  | ion Co  | nfigi         | uration  |
| (C) 1 | VC    | N/A     | U             | OVERTURNING: The ratio of the least horizontal dimension of the seismic-force-resisting system at the foundation level to the building height (base/height) is greater than 0.6S <sub>a</sub> . (Commentary: Sec. A.6.2.1. Tier 2: Sec. 5.4.3.3)   |
| Ĉ) 1  | VC    | N/A     | U             | TIES BETWEEN FOUNDATION ELEMENTS: The foundation has ties adequate to resist seismic forces where footings, piles, and piers are not restrained by beams, slabs, or soils classified as Site Class A, B, or C. (Commentary: Sec. A.6.2.2. Tier 2: Sec. 5.4.3.4)  |

| C (           | NC     | N/A    | U              | CROSS TIES: There are continuous cross ties between diaphragm chords. (Commentary: Sec. A.4.1.2. Tier 2: Sec. 5.6.1.2)   |
| <u>C</u>      | NC     | N/A    | U              | OPENINGS AT SHEAR WALLS: Diaphragm openings immediately adjacent to the shear walls are less than 25% of the wall length. (Commentary: Sec. A.4.1.4. Tier 2: Sec. 5.6.1.3)   |
| C             | (C)    | N/A    | U              | OPENINGS AT EXTERIOR MASONRY SHEAR WALLS: Diaphragm openings immediately adjacent to exterior masonry shear walls are not greater than 8 ft long. (Commentary: Sec. A.4.1.6. Tier 2: Sec. 5.6.1.3)   |

C NC (N/A) U STRAIGHT SHEATHING: All straight sheathed diaphragms have aspect ratios less than 2-to-1 in the direction being considered. (Commentary: Sec. A.4.2.1. Tier 2: Sec. 5.6.2)

U SPANS: All wood diaphragms with spans greater than 24 ft consist of wood structural panels or diagonal sheathing. (Commentary: Sec. A.4.2.2. Tier 2: Sec. 5.6.2)

DIAGONALLY SHEATHED AND UNBLOCKED DIAPHRAGMS: All diagonally sheathed or unblocked wood structural panel diaphragms have horizontal spans less than 40 ft and aspect ratios less than or equal to 4-to-1. (Commentary: Sec. A.4.2.3. Tier 2: Sec. 5.6.2)

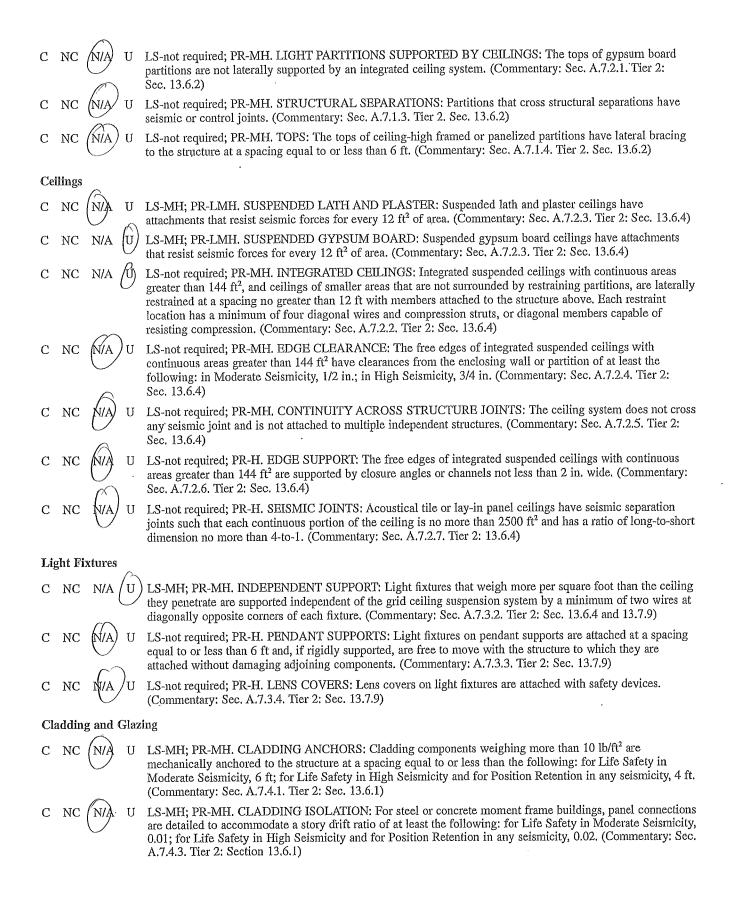

OTHER DIAPHRAGMS: The diaphragm shall not consist of a system other than wood, metal deck, concrete, or horizontal bracing. (Commentary: Sec. A.4.7.1. Tier 2: Sec. 5.6.5)

#### Connections

C NC N/A (U) STIFFNESS OF WALL ANCHORS: Anchors of concrete or masonry walls to wood structural elements are installed taut and are stiff enough to limit the relative movement between the wall and the diaphragm to no greater than 1/8 in. before engagement of the anchors. (Commentary: Sec. A.5.1.4. Tier 2: Sec. 5.7.1.2)

| С   | NC       | N/A    | ( <del>0</del> ) | LS-LMH; PR-LMH. UNREINFORCED MASONRY: Unreinforced masonry or hollow-clay tile partitions are braced at a spacing of at most 10 ft in Low or Moderate Seismicity, or at most 6 ft in High Seismicity. (Commentary: Sec. A.7.1.1. Tier 2: Sec. 13.6.2)  |
| С   | NC       | N/A    | (t)              | LS-LMH; PR-LMH. HEAVY PARTITIONS SUPPORTED BY CEILINGS: The tops of masonry or hollow-clay tile partitions are not laterally supported by an integrated ceiling system. (Commentary: Sec. A.7.2.1. Tier 2: Sec. 13.6.2)  |
| С   | NC       | N/A    |                  | LS-MH; PR-MH. DRIFT: Rigid cementitious partitions are detailed to accommodate the following drift ratios: in steel moment frame, concrete moment frame, and wood frame buildings, 0.02; in other buildings, 0.005. (Commentary A.7.1.2 Tier 2: Sec. 13.6.2)   |

NC LS-MH; PR-MH. MULTI-STORY PANELS: For multi-story panels attached at more than one floor level, panel connections are detailed to accommodate a story drift ratio of at least the following: for Life Safety in Moderate Seismicity, 0.01; for Life Safety in High Seismicity and for Position Retention in any seismicity. 0.02. (Commentary: Sec. A.7.4.4. Tier 2: Sec. 13.6.1) LS-MH; PR-MH. PANEL CONNECTIONS: Cladding panels are anchored out-of-plane with a minimum number of connections for each wall panel, as follows: for Life Safety in Moderate Seismicity, 2 connections; for Life Safety in High Seismicity and for Position Retention in any seismicity, 4 connections. (Commentary: Sec. A.7.4.5. Tier 2: Sec. 13.6.1.4) LS-MH; PR-MH. BEARING CONNECTIONS: Where bearing connections are used, there is a minimum of two bearing connections for each cladding panel. (Commentary: Sec. A.7.4.6. Tier 2: Sec. 13.6.1.4) LS-MH; PR-MH. INSERTS: Where concrete cladding components use inserts, the inserts have positive anchorage or are anchored to reinforcing steel. (Commentary: Sec. A.7.4.7. Tier 2: Sec. 13.6.1.4) LS-MH; PR-MH. OVERHEAD GLAZING: Glazing panes of any size in curtain walls and individual interior NC or exterior panes over 16 ft<sup>2</sup> in area are laminated annealed or laminated heat-strengthened glass and are detailed to remain in the frame when cracked. (Commentary: Sec. A.7.4.8; Tier 2; Sec. 13.6.1.5) Masonry Veneer LS-LMH; PR-LMH. TIES: Masonry veneer is connected to the backup with corrosion-resistant ties. There is a minimum of one tie for every 2-2/3 ft<sup>2</sup>, and the ties have spacing no greater than the following: for Life Safety in Low or Moderate Seismicity, 36 in.; for Life Safety in High Seismicity and for Position Retention in any seismicity, 24 in. (Commentary: Sec. A.7.5.1. Tier 2: Sec. 13.6.1.2) N/A LS-LMH; PR-LMH. SHELF ANGLES: Masonry veneer is supported by shelf angles or other elements at each NC floor above the ground floor. (Commentary: Sec. A.7.5.2. Tier 2; Sec. 13.6.1.2) NC NA LS-LMH; PR-LMH. WEAKENED PLANES: Masonry veneer is anchored to the backup adjacent to weakened planes, such as at the locations of flashing. (Commentary: Sec. A.7.5.3. Tier 2: Sec. 13.6.1.2) LS-LMH; PR-LMH. UNREINFORCED MASONRY BACKUP: There is no unreinforced masonry backup. NC (Commentary: Sec. A.7.7.2. Tier 2: Section 13.6.1.1 and 13.6.1.2) NC LS-MH; PR-MH. STUD TRACKS: For veneer with metal stud backup, stud tracks are fastened to the structure at a spacing equal to or less than 24 in, on center. (Commentary: Sec. A.7.6.1. Tier 2: Section 13.6.1.1 and 13.6.1.2) LS-MH; PR-MH. ANCHORAGE: For veneer with concrete block or masonry backup, the backup is positively anchored to the structure at a horizontal spacing equal to or less than 4 ft along the floors and roof, (Commentary: Sec. A.7.7.1. Tier 2: Section 13.6.1.1 and 13.6.1.2) LS-not required; PR-MH. WEEP HOLES: In veneer anchored to stud walls, the veneer has functioning weep holes and base flashing. (Commentary: Sec. A.7.5.6. Tier 2: Section 13.6.1.2) LS-not required; PR-MH. OPENINGS: For veneer with metal stud backup, steel studs frame window and door openings. (Commentary: Sec. A.7.6.2. Tier 2: Sec. 13.6.1.1 and 13.6.1.2) Parapets, Cornices, Ornamentation, and Appendages LS-LMH; PR-LMH. URM PARAPETS OR CORNICES: Laterally unsupported unreinforced masonry NC parapets or cornices have height-to-thickness ratios no greater than the following: for Life Safety in Low or Moderate Seismicity, 2.5; for Life Safety in High Seismicity and for Position Retention in any seismicity, 1.5. (Commentary: Sec. A.7.8.1, Tier 2: Sec. 13.6.5) LS-LMH; PR-LMH. CANOPIES: Canopies at building exits are anchored to the structure at a spacing no greater than the following: for Life Safety in Low or Moderate Seismicity, 10 ft; for Life Safety in High Seismicity and for Position Retention in any seismicity, 6 ft. (Commentary: Sec. A.7.8.2. Tier 2: Sec. 13.6.6) LS-MH; PR-LMH. CONCRETE PARAPETS: Concrete parapets with height-to-thickness ratios greater than 2.5 have vertical reinforcement. (Commentary: Sec. A.7.8.3. Tier 2: Sec. 13.6.5) LS-MH; PR-LMH. APPENDAGES: Cornices, parapets, signs, and other ornamentation or appendages that extend above the highest point of anchorage to the structure or cantilever from components are reinforced and anchored to the structural system at a spacing equal to or less than 6 ft. This checklist item does not apply to parapets or cornices covered by other checklist items. (Commentary: Sec. A.7.8.4. Tier 2: Sec. 13.6.6)

#### Masonry Chimneys

C NC NIA

U LS-LMH; PR-LMH. URM CHIMNEYS: Unreinforced masonry chimneys extend above the roof surface no more than the following: for Life Safety in Low or Moderate Seismicity, 3 times the least dimension of the chimney; for Life Safety in High Seismicity and for Position Retention in any seismicity, 2 times the least dimension of the chimney. (Commentary: Sec. A.7.9.1. Tier 2: 13.6.7)

C NC (N/A

LS-LMH; PR-LMH. ANCHORAGE: Masonry chimneys are anchored at each floor level, at the topmost ceiling level, and at the roof. (Commentary: Sec. A.7.9.2. Tier 2: 13.6.7)

#### Stairs

U LS-LMH; PR-LMH. STAIR ENCLOSURES: Hollow-clay tile or unreinforced masonry walls around stair enclosures are restrained out-of-plane and have height-to-thickness ratios not greater than the following: for Life Safety in Low or Moderate Seismicity, 15-to-1; for Life Safety in High Seismicity and for Position Retention in any seismicity, 12-to-1. (Commentary: Sec. A.7.10.1. Tier 2: Sec. 13.6.2 and 13.6.8)

C NC N/A

LS-LMH; PR-LMH. STAIR DETAILS: In moment frame structures, the connection between the stairs and the structure does not rely on shallow anchors in concrete. Alternatively, the stair details are capable of accommodating the drift calculated using the Quick Check procedure of Section 4.5.3.1 without including any lateral stiffness contribution from the stairs. (Commentary: Sec. A.7.10.2. Tier 2: 13.6.8)

#### Contents and Furnishings

C NC N/A (U) LS-MH; PR-MH. INDUSTRIAL STORAGE RACKS: Industrial storage racks or pallet racks more than 12 ft high meet the requirements of ANSI/MH 16.1 as modified by ASCE 7 Chapter 15. (Commentary: Sec. A.7.11.1. Tier 2; Sec. 13.8.1)

C NC N/A (U) LS-H; PR-MH. TALL NARROW CONTENTS: Contents more than 6 ft high with a height-to-depth or height-to-width ratio greater than 3-to-1 are anchored to the structure or to each other. (Commentary: Sec. A.7.11.2. Tier 2; Sec. 13.8.2)

C NC N/A (U) LS-H; PR-H. FALL-PRONE CONTENTS: Equipment, stored items, or other contents weighing more than 20 lb whose center of mass is more than 4 ft above the adjacent floor level are braced or otherwise restrained. (Commentary: Sec. A.7.11.3, Tier 2; Sec. 13.8.2)

C NC (N/A

U LS-not required; PR-MH. ACCESS FLOORS: Access floors more than 9 in. high are braced. (Commentary: Sec. A.7.11.4. Tier 2: Sec. 13.8.3)

U LS-not required; PR-MH. EQUIPMENT ON ACCESS FLOORS: Equipment and other contents supported by access floor systems are anchored or braced to the structure independent of the access floor. (Commentary: Sec. A.7.11.5. Tier 2: Sec. 13.7.7 and 13.8.3)

C NC N/A U LS-not required; PR-H. SUSPENDED CONTENTS: Items suspended without lateral bracing are free to swing from or move with the structure from which they are suspended without damaging themselves or adjoining components. (Commentary. A.7.11.6. Tier 2: Sec. 13.8.2)

#### Mechanical and Electrical Equipment

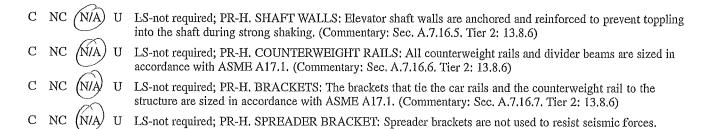

C NC N/A (U) LS-H; PR-H. FALL-PRONE EQUIPMENT: Equipment weighing more than 20 lb whose center of mass is more than 4 ft above the adjacent floor level, and which is not in-line equipment, is braced. (Commentary: A.7.12.4. Tier 2: 13.7.1 and 13.7.7)

C NC N/A (U) LS-H; PR-H. IN-LINE EQUIPMENT: Equipment installed in-line with a duct or piping system, with an operating weight more than 75 lb, is supported and laterally braced independent of the duct or piping system. (Commentary: Sec. A.7.12.5. Tier 2: Sec. 13.7.1)

C NC N/A (U LS-H; PR-MH. TALL NARROW EQUIPMENT: Equipment more than 6 ft high with a height-to-depth or height-to-width ratio greater than 3-to-1 is anchored to the floor slab or adjacent structural walls. (Commentary: Sec. A.7.12.6. Tier 2: Sec. 13.7.1 and 13.7.7)

C NC N/A U LS-not required; PR-MH. MECHANICAL DOORS: Mechanically operated doors are detailed to operate at a story drift ratio of 0.01. (Commentary: Sec. A.7.12.7. Tier 2: Sec. 13.6.9)

|     |      | _     |        |  |
|-----|------|-------|--------|--|
| С   | NC   | N/A   | ับ     | LS-not required; PR-H. SUSPENDED EQUIPMENT: Equipment suspended without lateral bracing is free to swing from or move with the structure from which it is suspended without damaging itself or adjoining components. Report Title Imbler High School SRG

Thu August 4, 2016 17:19:35 UTC

Building Code Reference Document ASCE 41-13 Retrofit Standard, BSE-1N

(which utilizes USGS hazard data available in 2008)

**Site Coordinates** 45.46245°N, 117.96525°W

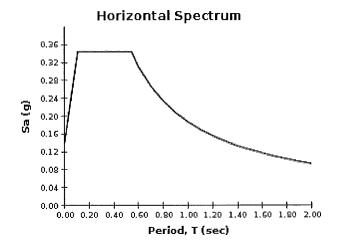

Site Soil Classification Site Class D - "Stiff Soil"

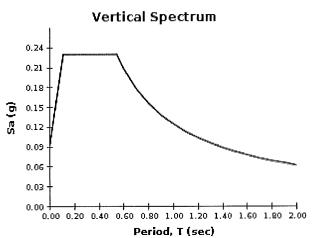

#### **USGS-Provided Output**

0.344 g S<sub>XS,BSE-1N</sub>

0.187 g S<sub>X1,BSE-1N</sub>

### **Occupancy Data**

For benefit-cost analysis, the average occupancy on a 24/7/365 basis is used for casualty calculations.

Enter data below ONLY for the occupancy categories applicable to this building - all other green cell entries should be left blank.

There are entries below for: employees, visitors, students, meetings or special events and patients.

NOTE: for buildings with similar occupancies each month, complete the tables on the left side only.

NOTE: For buildings with different summer occupancies, complete the tables both on the left and right sides. If this does not apply, enter "0" for number of summer months

### **Occupancy Data**

## SUMMARY OCCUPANCY DATA: Average 24/7/365 Occupancy

| Occupancy Category        | 12 Months or<br>Academic Year | Summer |
|---------------------------|-------------------------------|--------|
| Employees                 | 4.341                         | 0.334  |
| Visitors                  | 0.019                         | 0.004  |
| Students: K-12            | 27.666                        |        |
| Students: College         |                               |        |
| Meetings & Special Events | 7.086                         | N/A    |
| Patients                  |                               | N/A    |
| Subtotals:                | 39.111                        | 0.338  |
| Avg 24/7/365 Occupancy:   | : <b>39.448</b>               |        |

### DATA DOCUMENTATION: OCCUPANCY

Provide brief documentation below and/or references to other documents included with your application (with page number), for the sources of the occupancy data and estimates.

| (with page number), for the source              | es of the occupancy data and estimates.   |  |
|---|---|--|
| Employees: Numbers                              | Please see attached staff phone list  |  |
| Employees: Hours Per Day                        | Please see attached class schedule  |  |
| Visitors: Number Per Day                        | We have no documentation to show number of visitors per day. The number shown represents parer coming to pick up students for appointments and illness.   |  |
| Visitors: Average Time in<br>Building           | We have no documentation to show number of visitors per day. The number shown represents parents coming to pick up students for appointments and illness. |  |
| K-12 Students: Number                           | Please see population report  |  |
| K-12 Students: Hours Per Day                    | Please see class schedule   |  |
| K-12 Students: Days Per Year                    | Please see calendar table screen shot   |  |
| Additional Comments<br>Re: above Occupancy Data | The occupancy data listed on the previous page does not include athletic practice which would consist of 30 students Monday-Thursday for 4 hours per day. |  |
| College Student Occupancy<br>Data               |   |  |

|   | Meetings, Sports Events and Other Special Events   |  |  |  |  |  |
|---|--|--|--|--|--|--|
| NOTES:  | Provide specific documentation for high occupancy events or very frequent events with high Calculated 24/7/365 Occupancy, especially for occupancies that appear "unusual" or potentially  |  |  |  |  |  |
| Overview Statement Re:<br>Sources of Special<br>Events Occupancy<br>Estimates | "out of bounds."  Sporting Events: The bleachers have the capacity to hold approximately 540 people. Teams and support staff would account for approximately 20 people, and people often stand on the balcony above the bleachers to view games. |  |  |  |  |  |
|   | Music Concerts: The gym is usually about capacity for elementary concerts and less than capacity for high school concerts.   |  |  |  |  |  |
|   | Regular District Meetings: Meetings include monthly board of trustees, budget committee, booster club, foundation, and senior parent meetings.   |  |  |  |  |  |
|   | Graduation: Bleachers are at capacity, people standing in balcony above bleachers and floor covered with chairs for seating.   |  |  |  |  |  |
|   | 8th Graduation: Gym at less than half capacity.  |  |  |  |  |  |
|   |  |  |  |  |  |  |
|   |  |  |  |  |  |  |
|   |  |  |  |  |  |  |
|   |  |  |  |  |  |  |
|   |  |  |  |  |  |  |

### **Annual Operating Budget for this Facility**

For entities with multiple facilities, a fraction of the operating budget for a District Office of Headquarters building may be attributed to the building being retrofitted. That is, the annual operating budget for the building above may include part of the operating budget for the District Office or Headquarters Building. If so, complete the following tables:

| Dis            | trict Office/Headquarters Building Empl | oyees                          |   |  |                               |  |

NTS

I. CO HUNDERSTANDING THE APPLICANT HAS WITH RECARDS TO THE EFFORT THAT WILL BE THESE SCHEMATIC DAWNINGS HAVE BEEN PREPARED USING THE CURRENT OREGON (SEISMIC REHABIUTATION OF EXISTING BUILDINGS) AS THE REFERENCES FOR PRESCRIBED

'HE DRAWING ILLUSTRATES BOTH EXISTING CONDITION EVEL OF PERFORMANCE (LIFE SAFETY) ACCORDING TO IS AND GENERAL REPAIRS THAT WOULD NEED TO BE ACCOMPLISHED TO REACH AN ACCEPTABLE OURRENT CODE.

REHABILITATION RECOMMENDATIONS IEISMIC DEFICIENCIES

IEISMIC DEFINOR WILLS ARE NOT PROPERLY ATTACHED TO THE ROOF DIAPHRAGM FOR OUT-OF-PLANE LOADING. HE LOAD BEARNING WILLS ARE NOT PROPERLY ATTACHED TO N.SECTION.4.5.3.3

HE SLOAR STRESS IN SERVER WILL SCREEDS VALUES USTED IN SECTION.4.5.3.3

WARROW WOOD SHEAR WALLS WITH ASPECT RANTO GREATER THAN 2.7.01.4 ARE RELIED ON TO RESIST SEISMIC FORCES WALLS. WITH OPERINGS GEALTER OF THAN 98% OF THE LEIGHT ARE NOT BRACED WITH WOOD STRUCTURAL PANEL SHEAR WALLS. THE ROOF DAMPHAGM IS NOT CONTINUOUS AND CONSISTS OF SUPERLY LEVEL ROOF.

TOFF CHOOD IS NOT CONTINUOUS DE TO SOUT ROOF LEVEL STORE.

FOR CHOOD IS NOT CONTINUOUS DE TO SOUT ROOF LEVEL STORE.

DIAGONALLY SHEATHED DIAPHRAGM SPANS MORE THAN 40 FEET. E TOPS OF THE CONCRETE WALLS FOR BOTH THE GY T-OF-PLANE LOADING OVIDE BLOCKING, CLIPPING AND NAILING CONNECTION OF THE C IONAL CONNECTION HARDWARE WILL BE ADDED JNS ALONG TOP OF WALLS TO ESTABLISH ADEQUATE CONNECTION BETWEEN TOP OF WALL AND ) STRENGTHEN THE CONNECTION BETWEEN THE ROOF DIAPHRAGMS AND SHEAR WALLS CONNECTIONS SHOULD BE ADDED TO PROPERLY TRANSFER IN-PLANE LOADING INTO THE SHEAR
