

Publication OR-WFHDC-TB Working Family Household and Dependent Care (WFHDC) Tables

Tax year 2022

General information

The working family household and dependent care (WFHDC) credit is calculated by multiplying qualified expenses by a certain percentage. Due to the complexity in manually calculating the percentage, we have created a calculator to determine your percentage; look for the WFHDC calculator on Revenue Online at www.oregon.gov/dor. However, the following tables may be used as a manual method for determining the percentage. Doing so requires two tables:

- Household size tables, part A.
- Percentage table, part B.

The percentage represents multiple variables:

- The household size (variable 1);
- The taxpayer's federal or Oregon adjusted gross income (AGI), whichever is greater, in relation to the federal poverty level for the household size (variable 2);
- The age of the household's youngest qualifying individual as of January 1 of the tax year (variable 3); and
- In some cases, whether the youngest qualifying individual is disabled (part of variable 3).

For complete instructions for claiming the WFHDC credit, refer to Schedule OR-WFHDC.

Household size tables, part A. These tables represent variables (1) and (2), above. For purposes of this credit, household sizes range from two to eight. A taxpayer with a household size of one doesn't qualify for this credit. A taxpayer with a household size of nine or more uses the same table as for a household size of eight.

Each row has a dollar amount range for AGI and ends with a letter of the alphabet from A through Y. These letters correspond to the rows in the percentage table.

Percentage table, part B. This table combines variable (3) with the corresponding letter from the household size tables. Refer to the Schedule OR-WFHDC Instructions to determine household size and age of the youngest qualifying individual.

Instructions

- 1. Locate the appropriate household size table in part A.
- 2. Locate the row with the dollar range that matches the greater of the taxpayer's federal or Oregon AGI.
- 3. Note the corresponding letter (A through Y) in the right-hand column of the correct row.
- 4. Using this letter, locate the corresponding row in the percentage table in part B.
- 5. Use the column headings to locate the column that corresponds to the age of the taxpayer's youngest qualifying individual. Follow this column down to the row with the corresponding letter from part A. This is the taxpayer's percentage.
- 6. The taxpayer will enter this as a decimal on Schedule OR-WFHDC, line 23.

Example 1: Dan and Ashley have a household size of five. Their youngest qualifying individual is four years old on January 1 of the tax year. Their AGI is \$52,000. Using the "Household size = 5" table in part A, locate their AGI range on the row ending with the letter P. Next, find row P in the Percentage table in part B and use the column for individuals who are at least three years old but not yet six years old. Their WFHDC percentage is 45 percent, so they will enter 0.45 on Schedule OR-WFHDC, line 23.

Example 2: Gary has a household size of 10. His youngest qualifying individual is 15 years old on January 1 of the tax year and has a disability. Gary's AGI is \$105,000. Using the "Household size = 8" table in part A, find his AGI range on the row ending with the letter S. Next, find row S in the Percentage table and use the column for disabled individuals who are at 'At least age 13, but under age 18.' His WFHDC percentage is 30 percent, so he will enter 0.30 on Schedule OR-WFHDC, line 23.
