

## F5 VPN connection instructions

First make sure you have a Network connection either through your Wireless network or hardlined with a network cable

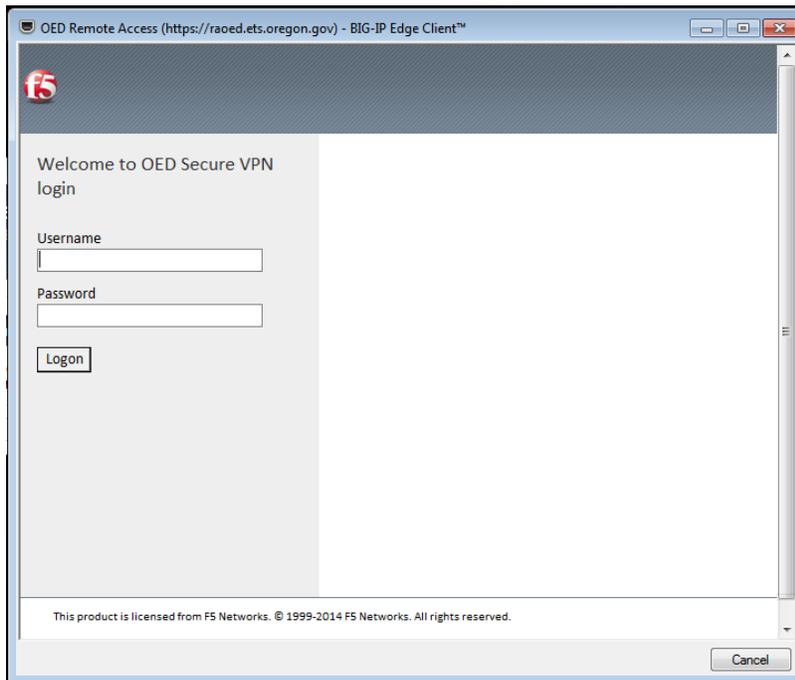

You may already have the Big IP VPN icon pinned to your taskbar, it looks like this:

If you do not, search for BIG-IP in on the search bar and you can Right Click and pin to taskbar

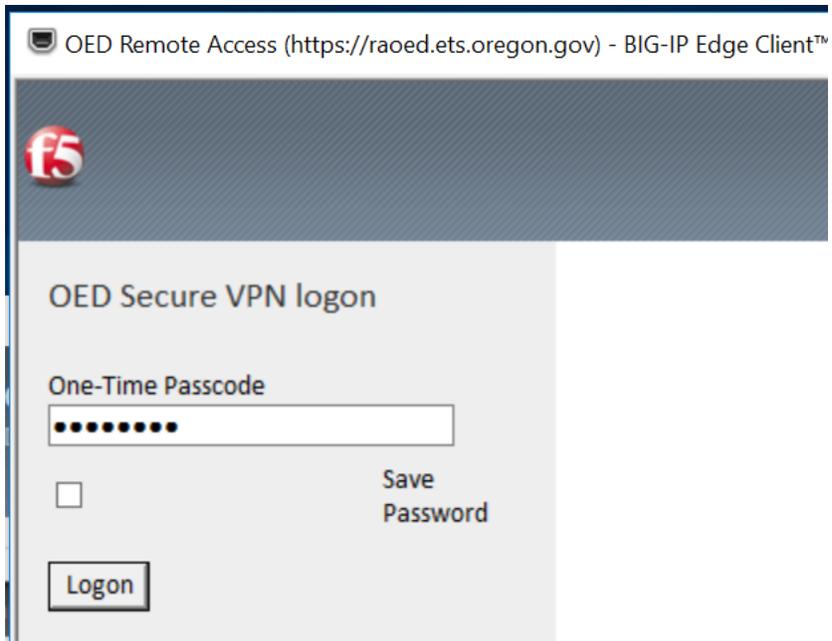

Load that icon and you will be prompted with a login window. Enter your Network credentials (the same you use to login to the PC)

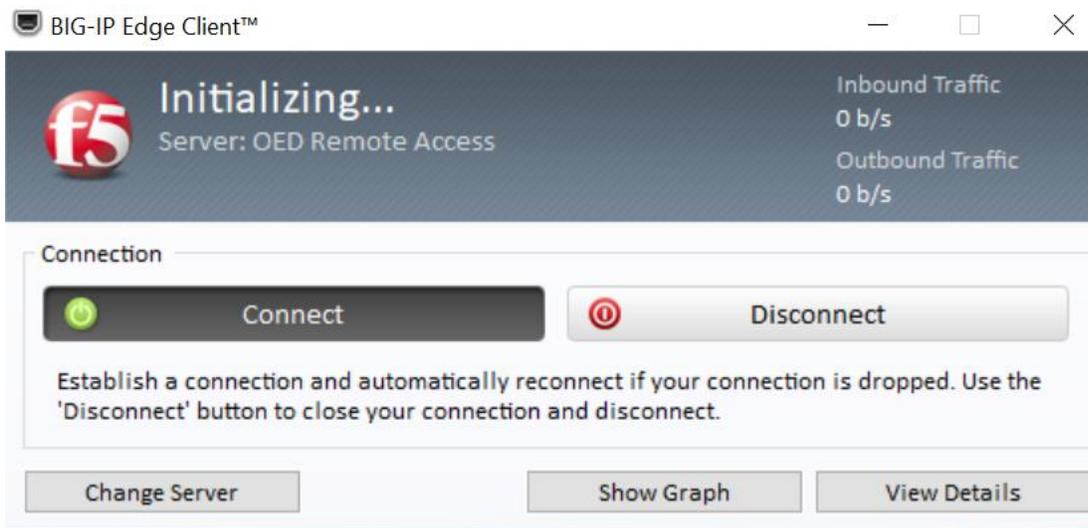

You should then see the program checking for antivirus software

After it passes that check, you will see this One-Time Passcode screen. You should shortly after that receive a text with the code, enter the code and Logon

You will then see this screen say Initializing, then Authenticating, then once you are connected it will disappear

To Disconnect, on your Taskbar near the clock, expand the arrows to show hidden icons. Right-click on the Red F5 icon and select Disconnect
