ENERGY**

December 2021

Small-Scale Energy Loan Report – 2021

EXECUTIVE SUMMARY

In 1979, the Oregon State Legislature established the Small-Scale Local Energy Loan Program (SELP) under ORS Chapter 470 to provide long-term fixed rate loans for Oregon energy projects. Over the program's history, the Oregon Department of Energy (ODOE) has issued more than 900 loans, with an associated \$612 million in financing, to recipients located across all 36 Oregon counties.

THROUGH SELP, ODOE HAS ISSUED MORE THAN 900 LOANS, WITH AN ASSOCIATED \$612 MILLION IN FINANCING, TO RECIPIENTS LOCATED ACROSS ALL 36 OREGON COUNTIES.

SELP has helped support State of Oregon energy policy by providing public, private, and tribal stakeholders access to energy project capital for qualified Oregon energy projects that invest in energy conservation, renewable energy, and alternative fuels, or that create products from recycled materials. SELP operates under authority established by ORS Chapter 470. SELP relies on program fees and loan interest to sustain operations. Historically, capital for loans was raised through the issuance of Article XI-J general obligation bonds.

While the program was active, the SELP program was supported by the Small-Scale Local Energy Project Advisory Committee (SELPAC), a nine-member director-appointed committee representing the interests of Oregon citizens. SELPAC provided broad subject matter expertise in the areas of energy technology, natural resource development, environmental protection, finance, agriculture, local and regional governance, and utility operations. SELPAC assisted SELP by making recommendations on loan applications and standards for small-scale local energy projects.

ODOE did not have bonding authority for the 2019-21 biennium covered by this report. Consequently, there are no new SELP loan originations to report. While the lending aspect of the program has been on hiatus since 2015, ODOE has continued to work diligently to improve the program's financial condition. For example, ODOE has reduced the budget deficit by more than \$8 million through a combination of bond refinancing, restructuring of debt, and collection activity.

The following SELP balance sheet and income statement summary is drawn from the program's audited financial statements and reflects an increase in the program's net position. The increase in net position represents an improvement in the financial condition of the program primarily through a reduction in program liabilities. Even though the program had positive net income (change in net position) in both fiscal year ending 2019 and 2020, SELP cash flow was negative over this period because the amount of assets that generate cash (loans) is significantly smaller than the amount of program liabilities that use cash (bond debt). This

Small-Scale Energy Loan Report – 2021

mismatch in the program’s balance sheet is the result of the default of high-risk loans that occurred between 2007 and 2012 and the lack of new loan origination since 2015.

SELP Balance Sheet and Income Statement

	Period Ending June 30, 2019	Period Ending June 30, 2020
Program Assets	\$ 139,213,269	\$ 125,135,615
Program Liabilities	\$ 152,496,274	\$ 135,668,987
Net Position	\$ (10,477,558)	\$ (8,310,990)
Program Revenue	\$ 7,848,881	\$ 7,207,427
Program Expense	\$ 5,817,138	\$ 5,040,859
Change in Net Position	\$ 2,031,743	\$ 2,166,568

The depletion of program cash reserves due to negative cash flow is not sustainable and has impaired the financial solvency of SELP. The program will require General Fund support to meet bond debt service payments in 2022 and 2023. The 2021 Legislature in SB 5506 (2021) appropriated \$3.5 million General Fund to ODOE to pay SELP bond debt service through the 2021-23 biennium.

The Oregon Department of Energy is currently focused on prudently managing the existing SELP loan portfolio to limit the effect of the program’s deficit on the General Fund.

The complete 2021 Report to the Legislature is available on ODOE’s website:

Small-Scale Energy Loan Report – 2021

INTRODUCTION

For more than 35 years, the Small-Scale Local Energy Loan Program has helped individuals, businesses, tribes, nonprofits, and public sector agencies pursue energy efficiency and renewable energy goals. Through SELP, ODOE has issued more than 900 loans, with an associated \$612 million in financing, to recipients located across all 36 Oregon counties.

THROUGH SELP, ODOE HAS ISSUED MORE THAN 900 LOANS, WITH AN ASSOCIATED \$612 MILLION IN FINANCING, TO RECIPIENTS LOCATED ACROSS ALL 36 OREGON COUNTIES.

As this report outlines, SELP is not currently writing or developing new loans. SELP staff are focused on working closely with existing borrowers to help ensure current loan repayments are managed carefully. Further, SELP staff has worked with external stakeholders to examine and explore the role of the SELP program and how it can provide value to Oregonians and advance the state’s energy goals. ODOE will develop thoughtful and realistic recommendations should the legislature wish to consider the program’s future. Those recommendations would incorporate an understanding of current credit and energy sector markets in Oregon, emerging energy technology, state energy goals, and the state’s tolerance for financial risk.

Program Background

The Small-Scale Local Energy Loan Program (SELP) was established by the Oregon State Legislature in 1979 under ORS Chapter 470. A legislatively-referred constitutional amendment to authorize the issuance of state Article XI-J bonds for small-scale local energy projects passed in 1980. SELP supports State of Oregon energy policy by providing public, private, and tribal stakeholders access to energy project capital. SELP issued Article XI-J general obligation bonds to originate fixed-rate long-term loans for qualified Oregon energy projects that invested in energy conservation, renewable energy, and alternative fuels, or that created products from recycled materials.

Over SELP’s 35-plus-year history, the program has issued more than 900 loans, with an associated \$612 million in financing, to recipients located across all 36 Oregon counties. Historically, a lack of access to project capital had been a barrier to energy project development. SELP played an important role in ensuring project capital was available to support the implementation of energy projects that advanced Oregon’s energy related goals.

Program Operations

The loan program operates as an enterprise fund and relies on program fees and loan interest to sustain operations. SELP made its first loan in 1981 and the program was intended to operate without general fund support. The program manages two major funds to carry out program activities:

Small-Scale Energy Loan Report – 2021

Small-Scale Local Energy Project Loan Fund

This fund and its sub-accounts, created by Article XI-J of the Constitution and appropriated to the Department under ORS 470.130 to hold the proceeds from article XI-J bond sales, is the funding source for program loans.

Small-Scale Local Energy Project Administration and Bond Sinking Fund

This fund, created under ORS 470.300, is the source for payment of all loan program expense. The sinking fund and its sub-accounts consist of all program fees and interest earned, program loan receivables, monies transferred from the Small-Scale Local Energy Project Loan Fund, and any gifts, grants, or legislative appropriations.

SELP has the legal authority to issue taxable and tax-exempt state XI-J general obligations bonds including private activity bonds to fund approved loan requests. The sale of XI-J bonds is facilitated by the State Treasurer through the Debt Management Division and only occurs after a loan has been approved. Because costs associated with issuing debts can be significant, the Debt Management Division typically requires the department to identify approximately \$5 million in approved loans before authorizing a bond sale. Loan amounts less than \$5 million can be funded via a bond sale; however, doing so may require combining SELP loans with other state programs in the same sale. This can increase the complexity and cost of a sale and is therefore used infrequently.

The loan program historically used internal cash flow generation to fund smaller loans that are not large enough to merit the sale of bonds. This process involves transferring resources from the Small-Scale Local Energy Project Administration and Bond Sinking Fund to the Small-Scale Local Energy Project Loan Fund. The transfer of funds from the bond sinking fund to the project loan fund may only occur during periods of sinking fund adequacy as articulated under ORS 470.300(3).

The Small-Scale Local Energy Project Advisory Committee (SELPAC), a nine-member appointed committee representing the interests of Oregon citizens, supported SELP program activities by providing broad subject matter expertise in the areas of energy technology, natural resource development, environmental protection, finance, agriculture, local and regional governance, and utility operations. The Advisory Committee is not currently active.

Program Challenges

SELP has a forecasted deficit in the Small-Scale Local Energy Project Administration and Bond Sinking Fund. As of July 31, 2021, the cumulative deficit through 2034 is projected to require additional cash funding of \$4.17 million, with the next bond sinking fund shortfall projected to

Small-Scale Energy Loan Report – 2021

occur April 2022. SELP currently anticipates a surplus fund balance sufficient to repay \$4.21 million of general fund appropriations once all future program loan revenue has been received in 2035. A projected deficit in the bond sinking fund was first recognized in December 2008 and has been reported since that time on SELP financial statements, official bond sale summaries, and in the program’s biennial reports to the Legislature. SB 5545, passed in the 2019 legislative session, appropriated \$4,334,048 to ODOE to pay SELP bond debt service through the 2019-21 biennium. However, as a result of a refunding, a pre-payment on a large loan, and reductions in expenses the General Fund appropriation was not needed and was reverted to the General Fund at the end of the 2019-21 biennium.

The SELP program’s overall projected deficit was reduced but also pushed forward into the 2021-23 biennium. The 2021 Legislature in SB 5506 (2021) appropriated \$3.5 million General Fund to ODOE to pay SELP bond debt service through the 2021-23 biennium.

The sinking fund deficit is the result of \$34.9 million in loan losses sustained on loans the department originated between the years 2007 and 2012. Of the \$34.9 million in losses suffered, over \$28 million is attributable to losses from two loans: Cascade Grain Products, LLC (\$18.1M) and Peak Sun Materials Corporation (\$10.2M). These two losses represent 74 percent of program loan losses to date. Due to these loan losses, SELP has fewer cash generating earnings assets to meet the ongoing cash requirements of operating the program. The single largest program expense is debt service on the bonds issued to fund loans.

ODOE was not granted bonding authority for SELP for the 2021-23 biennium. Consequently, the loan program is currently unable to originate new loans and thus unable to meaningfully contribute to reducing the bond sinking fund deficit through new loan revenue. Given the scope and timing of the current sinking fund deficit, SELP will require General Fund support in 2022 in order to pay its bonds even if the program immediately resumes new energy loan originations.

Though the agency cannot issue new loans, ODOE has been aggressive in reducing the deficit through expense reductions. In May 2020 the agency successfully closed a small bond refunding that generated \$4.6 million in cost savings. As required by statute, half of the generated cost savings were passed on to borrowers as a reduction in the interest rate on loans funded by bonds that were refunded.

**THOUGH THE AGENCY
CANNOT ISSUE NEW
LOANS, ODOE HAS BEEN
AGGRESSIVE IN REDUCING
THE DEFICIT THROUGH
EXPENSE REDUCTIONS.**

Like any loan program, SELP is subject to market forces that affect the cost of capital. As SELP’s cost of capital rose relative to other lending programs such as private capital markets, the demand for SELP loans decreased for many projects. In 1980, the U.S. prime lending rate was

Small-Scale Energy Loan Report – 2021

21.50 percent. In 1981 the prime rate ended the year at 15.75 percent, and SELP originated loans at an average rate of 10.9 percent. From 2008 to 2015, prime rate was unchanged at 3.25 percent and SELP originated loans in 2015 at an average rate of 4.38 percent, with half of the loan originations receiving an interest rate subsidy under the High-Performance Schools Pilot program. Currently prime is 3.25 percent. Historically, bond-funded SELP loans were generally cheaper than loans offered by private capital markets; however, this price differential reversed over time. While the current interest rate environment may become more favorable for SELP, SELP loans no longer represent “low-cost” funds, particularly for low-risk projects. Consequently, even if bonding authority were authorized, it would be unlikely that SELP would be able to grow its loan portfolio absent increases to the program’s risk tolerance or material changes in commercial credit markets or the energy sector.

SELP FINANCIAL OVERVIEW

The following SELP balance sheet and income statement summary is drawn from the program’s audited fiscal year-end financial statements and reflects an increase in the program’s net position compared to the prior year due to continued reductions in program expense.

SELP Balance Sheet and Income Statement

	Period Ending June 30, 2019	Period Ending June 30, 2020
Program Assets	\$ 139,213,269	\$ 125,135,615
Program Liabilities	\$ 152,496,274	\$ 135,668,987
Net Position	\$ (10,477,558)	\$ (8,310,990)
Program Revenue	\$ 7,848,881	\$ 7,207,427
Program Expense	\$ 5,817,138	\$ 5,040,859
Change in Net Position	\$ 2,031,743	\$ 2,166,568

With continued positive net income in fiscal year 2020, the Net Position of SELP increased compared to the prior year. This increase in net position is the result of agency efforts to shrink program liabilities and expense through cost-control and bond refunding.

Despite continued improvements to the financial condition of the program the scope of the cash flow deficit described under the Program Challenges portion of this report is large enough

Small-Scale Energy Loan Report – 2021

that program cash reserves continue to be depleted in order to pay program bond debt. Current cash balances held by the SELP program will not be sufficient to meet all future program expense. Due to program expenses trending lower and loan pre-payments, the agency’s most recent projections for the program indicate that the program will need an estimated \$2.37 million in General Fund support to meet required bond payments on April 1, 2022 and April 1, 2023.

The SELP forecasted cash flow deficit will persist through the life of the existing bond debt, which runs through 2034, with a cumulative cashflow shortfall currently estimated at \$4.17 million. The program forecasts loan portfolio revenue through 2035, so an ending fund balance surplus of \$4.21 million is projected in the final year of the program. The scope of the cash flow deficit is dynamic and is a function of anticipated loan repayment and program expense; consequently, the deficit forecast will change over time. If funds in the SELP bond sinking fund are sufficient, ORS 470.300 requires ODOE to reimburse the General Fund for any appropriations made to the department for SELP bond payments.

The following summaries of SELP cash balances at fiscal year-end 2019 and 2021 recap and illustrate the deterioration of SELP’s cash position over time.

SELP Cash Balances as of June 30, 2019

Small-Scale Local Energy Loan Fund	\$ -
Small-Scale Local Energy Admin & Bond Sinking Fund	
Principal & Interest Received	\$ 5,107,178
Extraordinary Expense	\$ 986,397
Borrower Revenue Loss Reserve	\$ 2,138,276
Bond Debt Service	\$ 4,981,105
Program Administration	\$ 205,437
Total	\$ 13,418,395

Small-Scale Energy Loan Report – 2021

SELP Cash Balances as of June 30, 2021

Small-Scale Local Energy Loan Fund	\$ -
Small-Scale Local Energy Admin & Bond Sinking Fund	
Principal & Interest Received	\$ 638,267
Extraordinary Expense	\$
Borrower Revenue Loss Reserve	\$ 2,194,677
Bond Debt Service	\$ 3,612,865
Program Administration	\$ 51,456
Total	\$ 6,497,265

ENERGY LOAN ACTIVITY - JANUARY 1, 2020 TO CURRENT

ODOE was not granted bonding authority for the period covered by this report. Therefore, no new SELP loans were made.

CURRENT SELP PROGRAM ACTIVITY

SELP staff continue to work closely with existing borrowers to help ensure current loan repayments are managed appropriately. Despite the negative economic impacts of the COVID-19 pandemic, the SELP portfolio has not been materially affected.
