The signed attestation provided on the Oregon RPS Standard Application applies to the information in this supplement.*

Section I: Applicant Information

Applicant Contact/Title:

Applicant Phone:

Applicant Email:

Applicant Company Name:

Section II: Facility Information

Unit Name:

Facility Name:

Facility Location (street address, legal description, or GPS coordinates):

City:

County:

State/Province:

Zip Code:

Country:

Section III: Facility Fuel Use

1. Indicate the eligible energy source used by the facility to produce electricity.

| | | | |
|--------------------------|-------------------------|--------------------------|-----------------|
| <input type="checkbox"/> | Biomass | <input type="checkbox"/> | Solar Thermal |
| <input type="checkbox"/> | Municipal Solid Waste | <input type="checkbox"/> | Other (specify) |
| <input type="checkbox"/> | Other Biomass (specify) | | |

2. Type of fossil fuel or other non-qualifying fuel:

3. Average annual percentage of non-qualifying fuel used:

4. How much does fuel input vary?

No variance. Small variance. Significant variance.

Please explain below.

5. Does the value (BTU) content of the fuel vary?

No variance. Small variance. Significant variance.

Please explain below.

6. How do you measure fuel value variance?

7. Fuel Split Calculation

Facilities using multiple fuel sources may only receive RPS approval for electricity produced from qualifying fuel sources. To determine what percentage of generation from a multi-fuel facility is eligible for the RPS, applicants must demonstrate a calculation method for attributing generation to the renewable and non-qualifying fuel sources. In a separate document please describe in detail the method you propose to distinguish generation attributable to eligible fuels and generation attributable to non-qualifying fuel.
