Exhibit A. Applicant Information (OAR 345-020-0011(1)(a))

(a) Exhibit A. Information about the applicant and participating persons, including:

(A) The name and address of the applicant including all co-owners of the proposed facility, the name, mailing address, email address and telephone number of the contact person for the NOI, and if there is a contact person other than the applicant, the name, title, mailing address, email address and telephone number of that person.

RESPONSE

Christopher Hocker, Vice President
Cascade Renewable Transmission, LLC
501 Kings Highway East, Suite 300
Fairfield, CT 06825
(203) 416-5590

(B) The contact name, mailing address, email address and telephone number of all participating persons, other than individuals, including but not limited to any parent corporation of the applicant, persons upon whom the applicant will rely for third-party permits or approvals related to the facility, and persons upon whom the applicant will rely in meeting any facility standard adopted by the Council.

RESPONSE

Christopher Hocker, Vice President
Cascade Renewable Transmission, LLC
501 Kings Highway East, Suite 300
Fairfield, CT 06825
(203) 416-5590

Cascade Renewable Transmission, LLC (CRT) is an entity formed in May 2020 for the purpose of developing the Cascade Renewable Transmission project under a Joint Development Agreement between PB CRTS, LLC and Sun2o Partners, LLC; PB CRTS is the managing partner of the development company.

PB CRTS is a wholly-owned subsidiary of PowerBridge, LLC of Fairfield, Connecticut, which is a leading developer, owner, and operator of independent transmission projects, with a unique focus on underwater high-voltage direct current (HVDC) applications. Through other wholly-owned subsidiaries, PowerBridge operates and is a part-owner of the Neptune and Hudson HVDC transmission projects that interconnect the PJM independent system operator (ISO) in New Jersey and the NY ISO in New York. The other member of CRT, Sun2o, is not affiliated with PowerBridge. Sun2o is primarily a solar developer based in New York City that recognized the need for additional east-west transmission in the Pacific Northwest region and came to PowerBridge for a solution.

CRT has no employees and will rely on the organizational, managerial, financial, and technical resources of its affiliated companies to meet the Energy Facility Siting Council's (EFSC) standards.

(C) If the applicant is a corporation, it shall give:

(i) The full name, official designation, mailing address, email address and telephone number of the officer responsible for submitting the NOI;

(ii) The date and place of its incorporation;

(iii) A copy of its articles of incorporation and its authorization for submitting the NOI; and

(iv) In the case of a corporation not incorporated in Oregon, the name and address of the resident attorney-in-fact in this state and proof of registration to do business in Oregon.

RESPONSE

CRT (Applicant) is not a corporation.

(D) If the applicant is a wholly owned subsidiary of a company, corporation or other business entity, in addition to the information required by paragraph (C), it shall give the full name and business address of each of the applicant's full or partial owners.

RESPONSE

Applicant is not a wholly-owned subsidiary of a company, corporation, or other business entity.

(E) If the person submitting the NOI is an association of citizens, a joint venture or a partnership, it shall give:

(i) The full name, official designation, mailing address, email address and telephone number of the person responsible for submitting the NOI;

(ii) The name, business address and telephone number of each person participating in the association, joint venture or partnership and the percentage interest held by each;

(iii) Proof of registration to do business in Oregon;

(iv) A copy of its articles of association, joint venture agreement or partnership agreement and a list of its members and their cities of residence; and

(v) If there are no articles of association, joint venture agreement or partnership agreement, the applicant shall state that fact over the signature of each member.

RESPONSE

Applicant is not an association of citizens, a joint venture, or partnership.

(F) If the applicant is a public or governmental entity, it shall give:

(i) The full name, official designation, mailing address, email address and telephone number of the person responsible for submitting the NOI; and

(ii) Written authorization from the entity's governing body to submit an NOI.

RESPONSE

Applicant is not a public or governmental entity.

(G) If the applicant is an individual, the individual shall give his or her mailing address, email address and telephone number.

RESPONSE

Applicant is not an individual.

(H) If the applicant is a limited liability company, it shall give:

(i) The full name, official designation, mailing address, email address and telephone number of the officer responsible for submitting the NOI;

(ii) The date and place of its formation;

(iii) A copy of its articles of organization and its authorization for submitting the NOI; and

(iv) In the case of a limited liability company not registered in Oregon, the name and address of the resident attorney-in-fact in this state and proof of registration to do business in Oregon.

RESPONSE

Officer Responsible for Submitting the Notice of Intent (NOI):
Christopher Hocker, Vice President
Cascade Renewable Transmission, LLC
501 Kings Highway East, Suite 300
Fairfield, CT 06825
Chocker@PowerBridge.us
(203) 416-5590

Applicant is a limited liability company formed under the laws of the State of New York on May 27, 2020, and registered to do business in the State of Oregon on May 27, 2022. A copy of the Articles of Organization for CRT is provided in Attachment 1. CRT is registered in Oregon; therefore, information for the resident attorney-in-fact is not required.

Exhibit B. Facility Description (OAR 345-020-0011(1)(b))

(b) Exhibit B. Information about the proposed facility, including:

(A) A description of the proposed energy facility, including as applicable:

(i) The nominal electric generating capacity and the average electrical generating capacity, as defined in ORS 469.300.

RESPONSE

The facility is not an energy-generating facility. Therefore, this rule is not applicable.

(ii) Major components, structures and systems, including a description of the size, type and configuration of equipment used to generate electricity and useful thermal energy.

RESPONSE

The facility is not an energy-generating facility. Therefore, this rule is not applicable.

(iii) Methods for waste management and waste disposal, including, to the extent known, the amount of wastewater the applicant anticipates, the applicant's plans for disposal of wastewater and storm water, and the location of disposal.

RESPONSE

Because the facility is not an energy-generating facility, it will not consume water in the generation of electricity, nor will it produce wastewater for disposal or significant quantities of solid waste. Further details of stormwater drainage, water, solid waste management, and sewers are provided in Exhibit K of this NOI.

(iv) For thermal power plants:

(I) A discussion of the source, quantity and availability of all fuels proposed to be used in the facility to generate electricity or useful thermal energy.

(II) Methods for disposal of waste heat.

RESPONSE

The facility is not a thermal power plant. Therefore, this rule is not applicable.

(v) For transmission lines, approximate transmission line voltage, load carrying capacity and type of current.

RESPONSE

The proposed project, Cascade Renewable Transmission (Project), is a (320-kilovolt [kV]) HVDC 1,100-megawatt (MW) electric transmission facility interconnecting the existing Bonneville Power Administration (BPA) Big Eddy 500-kV alternating current (AC) substation located near The Dalles, Oregon (Eastern Interconnection), and the existing Portland General Electric (PGE) Harborton 230-

kV AC substation located in Portland, Oregon (Western Interconnection) (Attachment 2; Figure B-1). At the eastern end of the Project, a converter station is proposed near the Big Eddy substation with approximately 500 feet of overhead, (500-kV) high-voltage alternating current (HVAC) transmission line to connect the converter station to the substation. At the western end of the Project, a converter station is proposed in northwest Portland, which would be connected to the Harborton substation with a high-voltage (230-kV), AC transmission line buried underground and installed via horizontal directional drilling (HDD) under the Willamette River.

(vi) For pipelines, approximate operating pressure and delivery capacity in thousand cubic feet per day.

RESPONSE

The facility is not a pipeline. Therefore, this rule is not applicable.

(vii) For surface facilities related to underground gas storage, estimated daily injection and withdrawal rates, horsepower compression required to operate at design injection or withdrawal rates, operating pressure range and fuel type of compressors.

RESPONSE

The facility is not related to underground gas storage. Therefore, this rule is not applicable.

(viii) For facilities to store liquefied natural gas, the approximate volume, maximum pressure, liquefication and gasification capacity in thousand cubic feet per hour.

RESPONSE

The facility will not store liquefied natural gas. Therefore, this rule is not applicable.

(B) A description of major components, structures and systems of each related or supporting facility.

RESPONSE

Facility Components/Structures

The facility will be comprised of the following major components and structures.

Converter Stations

Two voltage source conversion (VSC) HVDC technology converter stations would be located near the respective interconnection points, which are the BPA Big Eddy 500-kV substation near The Dalles and the PGE Harborton 230-kV substation in northwest Portland. The eastern converter station would convert AC power from Big Eddy substation to DC for transmission on the Project's 320-kV cable system to the western converter station, where it would be converted back to AC for injection at Harborton substation.

HVAC Transmission

The converter stations would be connected to the respective substations by HVAC cables. The eastern converter station near The Dalles would be connected to the existing Big Eddy substation

with approximately 500 feet of overhead 500-kV AC transmission line. The western converter station in Portland would be connected to the existing Harborton substation with three-phase, 230-kV transmission cable, installed in a trench in road rights-of-way (ROW) to the edge of the Willamette River, and approximately 0.5 miles of transmission cable across and under the bed of the Willamette River, installed by HDD. The trench for underground HVAC transmission line would be approximately 12 feet wide by 4.5 feet deep. Within the trench, three 12-inch conduits with a 4-foot separation and two 4-inch fiber optic conduits would be placed within a 6-inch concrete casing. To cross highways, railroads, or sensitive areas, the transmission line would be placed with HDD.

HVDC Transmission

The converter stations would be connected by 320-kV (1,100-MW) HVDC transmission cable bundled with associated fiber optic communications cable in underground conduits to the edge of the Columbia River on either end, and buried in the bed of the Columbia River in Oregon and Washington. To bypass the dam, locks, juvenile fish passage, and tribal fishing areas at the Bonneville Dam, the HVDC cable would be brought on land in Washington east of the dam complex, buried underground on the Washington side of the Columbia River for approximately 7.5 miles, then re-enter the river west of the dam complex. The trench for underground HVDC transmission line would be approximately 2.5 feet wide by 4.5 feet deep. Within the trench, two 8-inch conduits side by side and one 4-inch fiber optic conduit on top (cable bundle) would be placed within a 6-inch concrete casing. HDD would be used to transition the in-river cables to land. To cross highways, railroads, or sensitive areas, the transmission line would be placed with HDD.

(C) The approximate dimensions of major facility structures and visible features.

RESPONSE

Facility/Feature Dimensions

Converter Stations

The converter stations would be sited on approximately 5 acres, graveled and fenced with minimal parking, and appropriate site-specific drainage. These converter stations would include conventional design converter transformers, protective circuit breakers, and a control room for operating the facility as well as basic facilities for staff (bathroom/kitchen). Final design at each converter station will be in accordance with approved site plans that take into account local zoning requirements. For illustrative purposes, a typical general arrangement diagram for the Project converter station is shown in Figure B-2.

Figure B-2. Typical Converter Station Layout

HVAC Transmission

The eastern converter station would be connected to the Big Eddy substation with approximately 500 feet of overhead 500-kV, AC transmission line. The western converter station would be connected to the Harborton substation with approximately 2.6 miles of underground transmission cable, installed in a trench in road ROW to the edge of the Willamette River, and approximately 0.5 miles of transmission cable, installed via HDD under the Willamette River, which would not be visible.

HVDC Transmission

The Project's 320-kV (1,100-MW) HVDC cable system would include three segments of underground cable, one from each converter station to the edge of the Columbia River and one segment in Washington to bypass the Bonneville Lock and Dam. These underground segments would connect to two segments of in-river cable located between the Bonneville Dam and the eastern and western Project terminuses. Both the underground and underwater cable would feature cross linked polyethylene (XLPE) dielectric insulation cable design. No elements of the HVDC transmission cable bundle would be visible once construction is complete.

HVDC In-River Transmission Cable

For the in-river transmission cable, the conductor is of a compacted circular design, constructed from annealed copper wires and filled with a water blocking material to limit water propagation in case of cable severance, as seen in Figure B-3. The conductor has a nominal cross-sectional area of 2,500 square millimeters (mm^2). The conductor design meets the requirements laid down by Class 2 stranding per International Electrotechnical Commission (IEC) 60228. The overall in-river cable diameter is approximately 6 inches. The in-river transmission cable bundle, consisting of two 6-inch conductor cables and one fiber optic cable for communication, would be installed along approximately 79.5 miles of the Columbia River.

HVDC Underground Transmission Cable

For the underground transmission cable, the conductor is of a compacted circular design, constructed from annealed aluminum wires as seen in Figure B-4. The conductor has a nominal cross-sectional area of 3,000 mm^2. The conductor design meets the requirements laid down by Class 2 stranding per IEC 60228. The overall cable diameter is approximately 5 inches. Approximately 4.5 miles of underground transmission cable would be installed in a trench in road ROW from the eastern converter station to the edge of the Columbia River. Depending on the route chosen to the western converter station, between approximately 3.8 miles to 8 miles of underground transmission cable would be installed from the river to the western converter station. Alternative routes are discussed under Exhibit D.

Fiber Optic Communications Cable

In order to provide the required remote monitoring telemetry, station control, and voice communications, a fiber optic cable would be installed along with the HVDC and HVAC cables.

Exhibit C. Facility Location (OAR 345-020-0011(1)(c))

(c) Exhibit C. A description of the location of the proposed energy facility site and the proposed site of each related or supporting facility and all areas that might be temporarily disturbed during construction of the facility, including the approximate land area of each.

RESPONSE

The facility would be located near The Dalles, Wasco County, Oregon, in the bed of the Columbia River (Oregon and Washington), in Stevenson and North Bonneville, Skamania County, Washington, and in Portland and under the Willamette River, Multnomah County, Oregon (Attachment 2; Figure B-1).

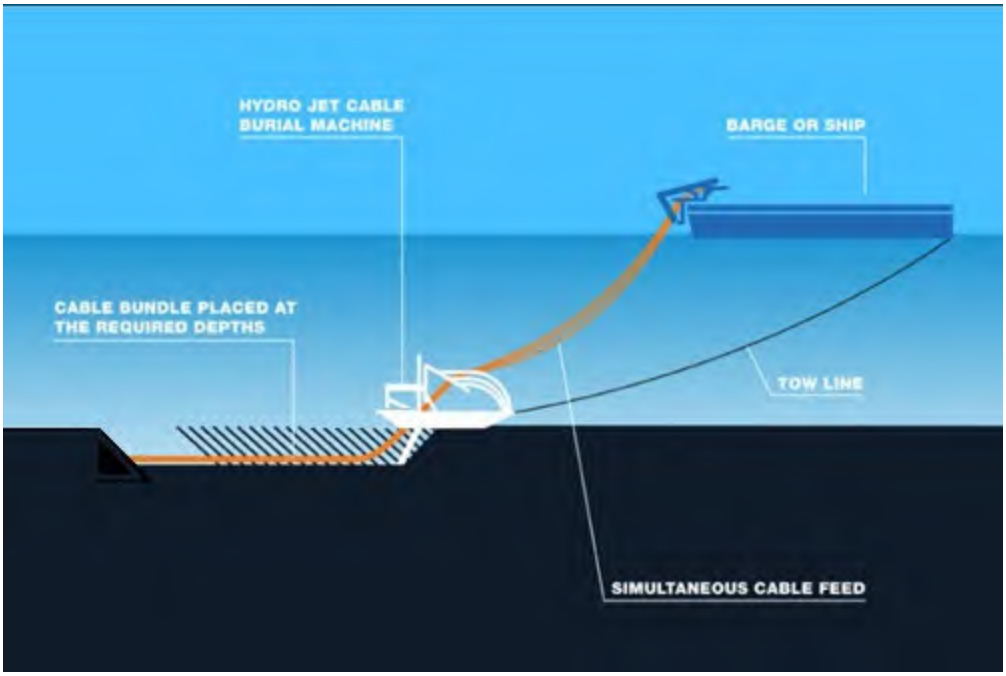
The proposed facility would include an eastern converter station to the north of the Big Eddy substation, connected to the substation by approximately 500 feet of 500-kV overhead HVAC transmission line. The permanent disturbance of the converter station would be approximately 5 acres, and an additional 2 acres would be temporarily disturbed while used as a materials laydown area.

From the eastern converter station, the HVDC transmission line would be buried underground for approximately 4.5 miles to an area near the Columbia River. From the eastern converter station, the HVDC cable would be placed in a trench in road ROW along Columbia View Drive to the south and northwest along the Dalles-California Highway (SR 197). To place the HVDC cable under SR 197 and Columbia View Drive, two temporary HDD work areas will be placed on the southeast and northwest corners of the intersection. The cable will then be trenched along SR 197 to the northwest and then placed via HDD under the SR 197 and Oregon State Route 30 (SR 30) intersection and continue via HDD along SR 30 to the intersection of SR 30 and E 2nd Street. At the areas where placement of the cable is transitioned from trench to HDD and vice versa, temporary work areas will be required. From E 2nd Street, the cable will be trenched north across private property and along Portsmouth Lane, and west along Tie Plant Road to an undeveloped area between Tie Plant Road to the north, Railview Drive to the south, and Brewery Overpass Road to the west. A temporary HDD entry pit and area for HDD equipment, approximately 1.4 acres in size, would be located in an undeveloped area near Tie Plant Road and Brewery Overpass. Conduit for the subsequent pull-through installation of the HVDC cable in the river would be installed using HDD for approximately 1,500 feet to the north under Tie Plant Road, Interstate 84 (I-84), and Riverfront Park into the Columbia River. Once the conduits are installed in the river, a temporary three-sided wet cofferdam would be placed in the river to facilitate a safe workspace for divers to conduct the land-to-water cable transition. Installation of the cofferdam may require dredging to level out the floor of the cofferdam. The cofferdam would be approximately 70 feet by 300 feet in size and would be removed after cable installation.

In the Columbia River, the HVDC line would be installed in proximity to the navigation channel at certain locations using a Hydro Jet Cable Burial Machine or “jet plow” (see Figure C-1) in the bed of the Columbia River to a point approximately 4 miles east of the Bonneville Lock and Dam. The jet plow would be towed by a vessel as shown in Figure C-1 along with a support vessel. The jet plow

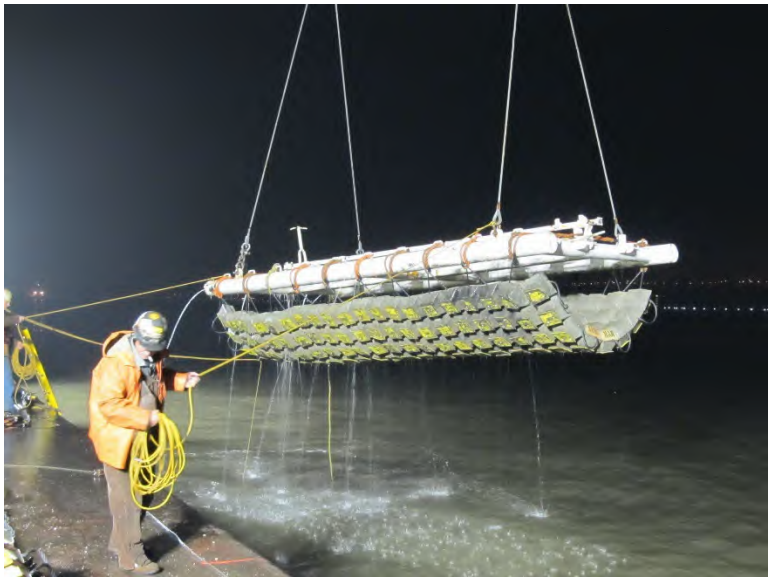
would create an approximately 18-inch wide trench by temporarily fluidizing sediment allowing the cable to be placed within the trench and the sediment to settle back over the cable, burying it at the prescribed depth in the riverbed. The jet plow would operate continuously when allowed and could place up to 1.5 miles of cable a day depending upon the sediment type, current circulation patterns, and river bottom conditions. Construction activities will be relatively short term and localized with water quality conditions likely recovering completely once construction is complete. Site-specific conditions will be evaluated as part of the analyses described under Exhibit J.

Figure C-1. Diagram of Jet Plow



The exact placement of the cable in the river will be determined based on considerations such as the nature of the sediment, the topography of the river bottom, the presence of underwater obstacles, and the need to avoid sensitive habitats and cultural resources. There may be up to two locations where minor dredging may be required to place the cable outside of the authorized navigation channel maintenance prism. Where the cable is placed directly on bedrock due to lack of sediment, a concrete mattress or a rock berm would be placed over the cable to keep it weighted down and to protect it from damage. A typical concrete mattress is approximately 8 feet wide by 12 feet long by 9 inches deep and is shown in Figure C-2.

Figure C-2. Example of Concrete Mattress



To bypass the Bonneville Dam complex, the HVDC cable would exit the river and come on shore near Stevenson, Washington. Similar to what is described above, a temporary cofferdam would be placed in the river to transition from jet plow to HDD to bring the cable on shore. A temporary HDD entry pit and area for HDD equipment, approximately 1.4 acres in size, would be located in an undeveloped area adjacent to Washington State Route 14 (SR 14) to receive the cable and transition to trenching. The cable would then be buried in a trench in road ROW along SR 14 and Ash Lake Road to the southwest to Fort Cascades Drive in North Bonneville, Washington. A temporary HDD entry pit and area for HDD equipment, approximately 1.4 acres in size, would be located in an undeveloped area at the end of Fort Cascades Drive at the edge of the river. Conduit for the subsequent pull-through installation of the HVDC cable into the river would be installed using HDD for approximately 1,100 feet into Columbia River. Another temporary three-sided, wet cofferdam would be placed in the river below the Bonneville Lock and Dam to transition from HDD to jet plow, to place the cable in the Columbia River and proceed west to North Portland.

At a point west of the Burlington Northern Santa Fe (BNSF) railroad bridge over the Columbia River in North Portland, a temporary three-sided wet cofferdam would be placed in the river to conduct the river-to-land cable transition to bring the cable on shore at Hayden Island. Similar to what is described above, a temporary HDD entry pit and area for HDD equipment, approximately 1.4 acres in size, would be located in an undeveloped area on the north shore of Hayden Island to receive the cable and transition to trenching. The cable would be trenched for approximately 0.7 miles across Hayden Island to the south. A temporary HDD entry pit and area for HDD equipment, approximately 1.4 acres in size, would be located in an undeveloped area south of the BSNF railroad near N Marine Drive to place the cable under the Columbia River to the south edge of Hayden Island, where a temporary HDD exit pit, approximately 0.75 acres in size, would be placed to receive the cable. Using the same HDD drill area south of the BNSF railroad near N Marine Drive, the cable would be placed via HDD under the BNSF railroad and N Marine Drive where a temporary HDD exit pit, approximately 0.75 acres in size, would be placed to receive the cable and transition to trenching. From N Marine Drive, the line would be trenched for approximately 2.3 miles in ROW west along N Marine Drive and southwest along N Leadbetter Road to the western converter station location.

A second option (Option 2) is under consideration to bring the HVDC on shore at Broughton Beach Park east of Hayden Island. A temporary HDD exit pit, approximately 0.75 acres in size, would be placed to receive the cable and transition to trenching for the cable to be placed in the NE Marine Drive ROW west to N Leadbetter Road to the western converter station location.

The western converter station location is in the Rivergate Industrial District located southwest of the corner of N. Leadbetter Road and N Marine Drive. The western converter station would be connected with the Harborton substation with approximately 3 miles of three-phase, 230-kV HVAC cables. From the western converter station site, the HVAC cables would be placed via HDD under the Columbia Slough and BNSF railroad where a temporary HDD exit pit, approximately 0.75 acres in size, would be placed to receive the cable and transition to trenching.

Option 3 is being considered as an alternative location to receive the cable on the west side of the railroad. From the west side of the railroad the cables would be installed in a trench in road ROW to N Lombard Street to N Ramsey Boulevard to N Rivergate Boulevard and to the edge of the Willamette River. A temporary HDD entry pit and area for HDD equipment, approximately 1.4 acres in size, would be located in an undeveloped area to transition from trenching to HDD to allow the cable to be placed under the Willamette River to the Harborton substation. A temporary HDD entry pit and area for HDD equipment, approximately 1.4 acres in size, would be located in an undeveloped area adjacent to the Harborton substation to receive the HVAC cables.

The facility site boundary provides the limits of the area that may be temporarily or permanently disturbed during facility construction. The site boundary encompasses some or all of the townships, ranges, and sections identified in Table C-1.

T03N R10E	25, 25, 27, 28, 29, 31,32, 33
T03N R11E	30, 31, 32, 33, 36
T03N R12E	31, 33, 34

In the Preliminary Application for Site Certificate (ASC), the Applicant will confirm the transmission line micrositing corridor within the site boundary. The Applicant requests micrositing flexibility within the site boundary to site the facility and related and supporting facilities in order to avoid and minimize impacts to resources. Worst-case temporary and permanent disturbance acreage impacts will be provided by facility component in the ASC. The approximate land area for each facility component for the purpose of this NOI is provided in Table C-2.

Table C-2. Approximate Land Area of Proposed Facility in Oregon

Facility Component	Approximate Land Area
Eastern Converter Station	5 acres (permanent), 2 acres (temporary)
Western Converter Station	5 acres (permanent), 2 acres (temporary)
HVAC overhead transmission to connect eastern converter station to existing substation	500 feet in length, 200-foot ROW width: 2.2 acres of temporary disturbance, permanent disturbance accounted for in converter station footprint.
HVDC Transmission	30.5 acres total (temporary): On land: 2.3 acres (temporary) In river: 13.6 acres (temporary) HDD work areas: 14.6 acres. (Work area in western converter station footprint not counted).
HVAC underground transmission to connect western converter station to existing substation	3.8 acres (temporary)

Exhibit D. Alternative Locations (OAR 345-020-0011(1)(d))

(d) Exhibit D. If the proposed energy facility is a pipeline or a transmission line or has, as a related or supporting facility, a transmission line or pipeline that, by itself, is an energy facility under the definition in ORS 469.300, identification of at least two proposed corridors, as defined in OAR 345-001-0010, or identification of a single proposed corridor with an explanation of why alternate corridors are unlikely to better meet the applicant's needs and satisfy the Council's standards. The applicant shall include an explanation of the basis for selecting the proposed corridor(s) and, for each proposed corridor, the information described in subsections (e), (g), (i), (j), (k), (n) and (p) that is available from existing maps, aerial photographs, and a search of readily available literature.

RESPONSE

Alternatives

Alternative locations considered for the transmission line include variations on a route that would primarily use federal and state highway ROW.

Alternative 1: The Applicant considered an alternative that would route the transmission line entirely on land buried underground in a trench or via HDD. This alternative would include the proposed eastern converter station connected to the Big Eddy substation by approximately 500 feet of 500-kV overhead AC transmission line. From the eastern converter station, the DC transmission line would be buried in a trench in road ROW for approximately 4.5 miles to the south along Columbia View Drive, to the northwest along SR 197, and to the west along SR 30/2nd Avenue ROW to the Sunshine Mill at 901 E 2nd Street in The Dalles. At the Sunshine Mill, the transmission line would be placed via HDD to the north/northeast under I-84 to The Dalles Marina parking lot. From The Dalles Marina parking lot, the transmission line would be buried in a trench within the I-84 west ramp ROW and continue west along I-84 within the shoulder of the ROW for approximately 58 miles to I-84 Exit 17 at Sandy River, Oregon. From Sandy River, the transmission line would be located along NW Frontage Road and NE Marine Drive for approximately 17 miles to Route 120 in Portland. In this stretch, the transmission line would be routed around/under Interstate 5 (I-5) via HDD. At Route 120, the transmission line would be located to the south along Route 120, to the west along N Columbia Boulevard, and to the southwest along N Burgard Road/Way for approximately 5 miles to the proposed western converter station location on N Burgard Way. From the proposed western converter station, the AC transmission line would be connected to the Harborton substation via HDD under the Willamette River.

The Applicant reviewed Alternative 1 for constructability and engaged Oregon Department of Transportation (ODOT) and the Federal Highway Administration (FHWA) to determine the feasibility of this alternative. While the route appears to be constructable, ODOT does not permit longitudinal utility installations to occur within the median or under any paved portion of the ROW (Attachment 3). (This restriction applies to both I-84 and state highways.) Thus, it is virtually impossible to use unpaved edges of the ROW for any appreciable distance without encountering paved shoulder

areas. Therefore, the Applicant determined that this alternative, or any alternative making extensive use of federal or state highways, is not feasible.

Alternative 2: The Applicant considered a variation of the above alternative that would start at the eastern end of the route and proceed to I-84, as described in Alternative 1, and continue west along I-84 within the ROW for approximately 61 miles to Rooster Rock State Park parking lot. From Rooster Rock State Park parking lot, the transmission line would enter the Columbia River via HDD and proceed west toward a point on shore near the western converter station site. From the proposed western converter station, the AC transmission line would be connected to the Harborton substation via underground trench and HDD under the Willamette River.

As noted under Alternative 1, this alternative, as well as any alternative making extensive use of federal and state highway ROWs, is not feasible due to prohibitions on utility installations underneath the paved area of the ROW.

Selection of Project Converter Station Locations

The Project requires converter stations at each of the interconnecting ends to convert the transmitted power between AC and DC. Potential locations for the converter stations were identified and evaluated using a number of criteria, including the following:

- Converter station sites should be close to the selected interconnection substations to minimize overhead interconnecting cable length and corresponding electrical losses, environmental impacts, and construction costs;
- Land must be available for purchase or long-term lease from willing property owners; the Applicant does not presume to have the authority to take property by eminent domain;
- Sites must have sufficient space (5 acres) available to construct a converter station on relatively flat topography.
- General compatibility with local zoning requirements and nearby land uses; and
- Sites should be at a distance from main thoroughfares to minimize visual impact.

Exhibit E. Permits Needed for Construction and Operation (OAR 345-020-0011(1)(e))

(e) Exhibit E. Identification of all federal, state and local government permits related to the siting of the proposed facility, a legal citation of the statute, rule or ordinance governing each permit, and the name, address, email address and telephone number of the agency or office responsible for each permit. For each permit, the applicant shall provide a preliminary analysis of whether the permit should or should not be included in and governed by the site certificate.

RESPONSE

Table E-1 identifies the federal, state, and local government permits required for facility construction and operation. The Applicant will conduct federal and state permitting efforts concurrently to provide consistency and avoid duplication of efforts.

Table E-1. Permits or Other Approvals Required for Construction and Operation of the Facility.

Local Permits in Washington		
City of North Bonneville Planning Department Tom Jermann, Planning Advisor (509) 427-8182 tomj@northbonneville.net	Shoreline Substantial Development Permit (Type III)	Work within shoreline jurisdiction or shoreline buffer. The Applicant will seek determination of compliance with local land use standards under the WA EFSEC permit.
City of North Bonneville Planning Department	Type II Process	Approval of use within a zoning designation. The Applicant will seek determination of compliance with local land use standards under the WA EFSEC permit.
City of North Bonneville Planning Department	Building Permit	Construction of any structure. The Applicant will seek determination of compliance with local land use standards under the WA EFSEC permit.
City of North Bonneville Planning Department	Grading Permit (Type I)	Land preparation (clearing and grading). The Applicant will seek determination of compliance with local land use standards under the WA EFSEC permit.
Skamania County Skamania County Community Development Department Alan Peters, Community Development Director (509) 427-3906 apeters@co.skamania.wa.us	Shoreline Management Program Compliance	Work within Columbia River. The Applicant will seek determination of compliance with local land use standards under the WA EFSEC permit.

Exhibit F. Property Ownership (OAR 345-020-0011(1)(f))

(f) Exhibit F. A list of the names and mailing addresses of all owners of record, as shown on the most recent property tax assessment roll, of property located within or adjacent to the site boundary as defined in OAR 345-001-0010. In addition to incorporating the list in the NOI, the applicant shall submit the list to the Department of Energy in electronic format acceptable to the Department for the production of mailing labels. Property adjacent to the site boundary means property that is:

(A) Within 100 feet of the site boundary where the site, corridor or micrositing corridor is within an urban growth boundary;

(B) Within 250 feet of the site boundary where the site, corridor or micrositing corridor is outside an urban growth boundary and not within a farm or forest zone; and

(C) Within 500 feet of the site boundary where the site, corridor or micrositing corridor is within a farm or forest zone.

RESPONSE

In accordance with OAR 345-010-0011(1)(f)(A)(iii), a list of the names and mailing addresses of Wasco County, Hood River, and Multnomah County owners of record of properties located inside the proposed facility site boundary and within 500 feet of the property line crossed by the proposed facility site boundary is provided in Table F-1 of Attachment 4. Property ownership records were obtained from Wasco and Multnomah counties' property tax lots in relation to the site boundary. An electronic list of property ownership will be provided to the Oregon Department of Energy (ODOE) in a format suitable to produce mailing labels.

Exhibit G. Facility Maps (OAR 345-020-0011(1)(g))

(g) Exhibit G. A map or maps showing:

(A) The proposed locations of the energy facility site, all related or supporting facility sites and all areas that might be temporarily disturbed during construction of the facility in relation to major roads, water bodies, cities and towns, important landmarks and topographic features.

(B) The proposed locations of the corridors the applicant has identified under subsection (d) in relation to major roads, water bodies, cities and towns, important landmarks and topographic features.

RESPONSE

Attachment 2 provides a series of maps (Figures G-1 through G-3) showing the information required under OAR 345-020-0011(1)(g). These figures are further described in the responses below. Figure G-1 map set shows the location of the facility site boundary in relation to major roads, waterbodies, cities and towns, important landmarks, and topographic features.

(C) The study area(s) for the proposed facility as defined in OAR 345-001-0010.

(D) The topography of the study area(s) including streams, rivers, lakes, major roads and contour lines.

RESPONSE

Figure G-1a map set shows the boundaries and topography (including streams, rivers, lakes, major roads, and contours) of the study areas for surface and groundwater (site boundary), wetlands and waters of the U.S. (site boundary), threatened and endangered plants and animal species (site boundary), historic, cultural, and archaeological areas (site boundary), scenic and aesthetic areas (site boundary), and recreation (site boundary). Figure G-2b map set shows the study areas for fish and wildlife habitat and land use (site boundary, plus 0.5 miles). The Applicant developed these maps to correspond with the study areas defined under OAR 345-001-0010(59). The Applicant understands that the ODOE will formally establish these “study areas” in the project order.

(E) All protected areas in the study area as defined in OAR 345-001-0010 for impacts to protected areas.

RESPONSE

Figure G-2 shows protected areas in the 20-mile study area as defined in OAR 345-001-0010(59) and as designated in OAR 345-022-0040.

(F) The location of any potential waters of the state or waters of the United States that are on or adjacent to the site.

RESPONSE

Figure G-3 shows the locations of any potential waters of the state or waters of the U.S., as represented in the National Wetlands Inventory (NWI) that are on or adjacent to the facility site.

(G) For energy generation facilities, the approximate locations of any other energy generation facilities that are known to the applicant to be permitted at the state or local level within the study area as defined in OAR 345-001-0010 for impacts to public services.

RESPONSE

The facility is not an energy-generating facility. Therefore, no figure has been prepared.

Exhibit H. Non-generating Energy Facility (OAR 345-020-0011(1)(h))

(h) Exhibit H. If the proposed facility is a non-generating energy facility for which the applicant must demonstrate need under OAR 345-023-0005, identification of the rule in Division 23 of this chapter under which the applicant intends to demonstrate need and a summary statement of the need and justification for the proposed facility.

RESPONSE

The Applicant intends to demonstrate need for the proposed non-generating facility under the system reliability rule for transmission lines, OAR 345-023-0030.

The need for the Project is to address the deficiency in the long-term available transfer capacity (ATC) across the Cascades to address five key regional drivers:

- State of Oregon and State of Washington public policy requirements mandating 80 percent renewable energy by 2030.
- West of Cascades load growth in the Seattle and Portland load centers.
- Retirement of the 1,340-MW Centralia Coal Plant located west of the Cascades.
- State climate policies driving electrification of buildings and transportation.
- Replacement of greater than 4 gigawatts (GW) of east of Cascades fossil generation with eastern renewables.

The Project is consistent with the North American Electric Reliability Corporation (NERC) reliability standards in effect as of September 18, 2015, as they apply either internally or externally to a utility system. Moreover, in September 2020, the Applicant initiated the required path rating process of the Western Electricity Coordinating Council (WECC) and has undertaken Phase I, Phase 2A, and Phase 2B studies under the WECC project coordination and path rating processes, which studies and evaluates potential impacts of a proposed project on the electrical system. In July 2022, WECC informed the Applicant that the Project has been granted Phase 3 status with an accepted rating of 1,100 MW.

Exhibit I. Land Use (OAR 345-020-0011(1)(i))

(i) Exhibit I. A statement indicating whether the applicant intends to satisfy the Council's land use standard, OAR 345-022-0030, by obtaining local land use approval under ORS 469.504(1)(a) or by seeking a Council determination under ORS 469.504(1)(b).

RESPONSE

The Applicant intends to satisfy EFSC's land use standard, OAR 345-022-0030, by seeking an EFSC determination under ORS 469.504(1)(b). The Applicant seeks a determination by EFSC of compliance with land use standards from Wasco County, Multnomah County, the City of The Dalles, and the City of Portland.

Exhibit J. Environmental Impacts (OAR 345-020-0011(1)(j))

(j) Exhibit J. Identification of significant potential environmental impacts of construction and operation of the proposed facility on the study areas, including those impacts affecting air quality, surface and ground water quality and availability, wildlife and wildlife habitat, threatened and endangered plant and animal species, historic, cultural and archaeological resources, scenic and aesthetic areas, recreation, land use, and wildfire risk.

RESPONSE

This exhibit presents potential environmental impacts from the facility's construction and operation on air quality; surface and groundwater quality and availability; wetlands and waters of the U.S., fish and wildlife and their habitat; threatened and endangered plant and animal species; historic, cultural, and archaeological resources; scenic and aesthetic areas (including protected areas); recreation; protected areas; land use; and wildfire. The data analyzed were gathered from publicly available data in geographic information system (GIS) format. The analyses are based on the study area for each resource, defined in OAR 345-001-0010(59), and shown in Table J-1.

Table J-1. Study Areas for Environmental Impacts

Resource	Study Area	Regulatory Requirement
Air Quality	Site boundary	Not applicable
Surface and Groundwater	Site boundary	Not applicable
Wetlands and Waters of the US	Site boundary	Not applicable
Fish and Wildlife Habitat	Site boundary, plus 0.5 miles	OAR 345-001-0010(59)(c)
Threatened and Endangered Plants and Animal Species	Site boundary	OAR 345-001-0010(59)(g)
Historic, Cultural, and Archaeological Areas	Site boundary	Not applicable
Scenic and Aesthetic Areas	10 miles from site boundary	OAR 345-001-0010(59)(b)
Recreation	Site boundary	OAR 345-001-0010(59)(g)
Protected Areas	20 miles from site boundary	OAR 345-001-0010(59)(e)
Land Use	Site boundary, plus 0.5 miles	OAR 345-001-0010(59)(c)
Wildfire Risk	Site boundary	Not applicable

Air Quality

The facility will not emit air pollution. During construction, air pollutant combustion emissions will be generated from diesel and gasoline engines in the various vehicles and construction equipment. Fugitive dust may be generated from vehicle traffic on paved and unpaved roads and from equipment during construction activities. The Applicant will implement best management practices (BMPs), including applying dust control measures that will be described in the ASC. The emissions and fugitive dust from these vehicles and equipment will be minor and will not exceed state emissions thresholds. As such, these emissions are not quantified and do not require a permit from the Oregon Department of Environmental Quality (ODEQ).

Surface and Groundwater

The study area for surface and groundwater is the site boundary. The facility will not discharge pollutants to surface or groundwater. During construction, temporary impacts from on land construction stormwater will be managed in accordance with a National Pollutant Discharge Elimination System (NPDES) 1200-C permit and associated erosion and sediment control plan (ESCP). The NPDES 1200-C and ESCP will be issued by ODEQ and the State of Washington Department of Ecology (Ecology).

Water Quantity

During construction of the converter stations, approximately 164,000 gallons of water will be required for dust control, compaction, concrete mixing, etc., and approximately 1,395,000 gallons of water will be required for HDD, for a total of approximately 1,559,000 gallons. Up to 500 gallons per day will be used over an approximately 24-month construction period. Daily water use will vary depending on the timing of construction and the weather. Water will be supplied from an existing source with a valid water right. This could mean that water is transported to the site by water trucks from an off-site municipal or commercial source via bilateral agreements. The construction contractor will be responsible for identifying water sources and ensuring any needed permits or approvals are obtained prior to construction. In the ASC, the Applicant will confirm the anticipated amount of water required for construction and confirm with the municipalities that they are capable of providing sufficient water to meet construction needs.

During operations, each converter station will have basic facilities for employees (bathroom/kitchen), which will require the use of water. Each converter station is anticipated to use approximately 115 gallons of water per day. It is anticipated that the western converter station will discharge to a municipal system. It is unknown if the eastern converter station will discharge to a municipal system or require a licensed on-site septic system. Small quantities of hazardous materials will be contained in equipment at each converter station, including capacitor electric insulating oil, transformer electric insulating fluid, and lead and sulfuric acid in batteries. Transformer electric insulating fluid may also be stored in drums on site in secondary containment. A spill countermeasure, control, and prevention (SPCC) plan would be prepared and maintained if warranted by state and federal requirements.

Water Quality

The analysis area for water quality is proposed as the Columbia River plus 500 feet for upland areas; this will capture indirect effects to fish and wildlife from runoff, visual, and noise disturbances. As part of the U.S. Army Corps of Engineers (USACE), ODEQ Section 401, and Ecology permitting, water quality will be evaluated by using the Particle Tracking Model (PTM) developed by the USACE Engineer Research and Development Center Environmental Laboratory. The PTM is designed to simulate particle transport processes and was developed for application to dredging and coastal projects to represent transport, settling, deposition, mixing, and resuspension processes in nearshore wave/current conditions (USACE 2022). In addition, sediment sampling will occur every river mile along the proposed alignment profile and in locations where the transmission cable transitions in and out of the water at the cofferdam locations. The modeling and analysis will be inclusive of all areas that include in-river work.

Sediment sampling, modeling and analysis will be conducted in coordination with the Regional Sediment Evaluation Team (RSET). The RSET is a consortium of state and federal agencies that work together to assess and characterize sediment to determine the suitability of dredged material for unconfined, aquatic disposal; determine the suitability of post-dredge surfaces; and predict effects on water quality during dredging. Represented agencies include USACE, U.S. Environmental Protection Agency (EPA), National Oceanic and Atmospheric Administration (NOAA Fisheries), U.S. Fish and Wildlife Service (USFWS), ODEQ; Idaho Department of Environmental Quality (IDEQ); Ecology, and Washington State Department of Natural Resources (WDNR). The RSET will review and provide input into the proposed sediment sampling and analysis plan (SAP), sampling results, model assumptions and hydraulic scenario, model results, and analysis based on these results. The combination of existing information, sampling, and model results will be used as the basis to evaluate water quality changes and related effects on aquatic life, including species listed under the Endangered Species Act (ESA), and inform the analysis for the 401 Water Quality Certification review.

Placing temporary cofferdams and installing the cable via jet plow in the Columbia River would cause temporary suspension of sediments. Potential impacts to water quality include temporarily increased turbidity. The USACE has previously conducted sediment sampling in the navigation channel, with the results showing sediments dominated by coarse-grained materials with fines in the range of 0.1 to 2.5 percent. It is anticipated that sediments sampled for this Project will have similar physical characteristics, which would indicate that rapid redeposition would occur with minimal fines suspended in the water column. Therefore, impacts to water quality from turbidity are expected to be low.

The proposed cable alignment will avoid known areas of contamination as identified by EPA on its National Priorities List (NPL), which include Bradford Island, Reynolds Metal Company, McCormick & Baxter, and Portland Harbor (EPA 2023). Bradford Island bisects the Columbia River and incudes a large portion of the Bonneville Lock and Dam complex, including the fish ladder and visitor center. The cable alignment will bypass the Bonneville Dam, including Bradford Island, as described above in Exhibit B. The former Reynolds Metals Company is located adjacent to the Columbia and Sandy rivers in Troutdale, Oregon. While the boundary of this site extends into the Sandy River, it does not extend into the Columbia River; therefore, it will have no relationship to the proposed cable alignment. The Portland Harbor site is inclusive of the Willamette River and adjacent shorelines from River Mile 1.9 to 11.8. The McCormick & Baxter Creosoting site is located within the same reach/physical limits of the Portland Harbor site but is addressed as a separate EPA action. The cable would avoid the capped sediments from both sites by using HDD technology to route the cable underneath the sediments. Therefore, impacts to water quality from disturbance of contaminated sediments are expected to be low.

The potential impact of heat produced by underwater cable systems has been shown to be minimal and confined to sediments in immediate proximity to the cables (Exponent 2015). The potential heat generated by the cable would primarily be a function of burial depth and the nature of the sediment, as shown by predictive modeling. Anticipated impacts are expected to be low.

A water quality analysis will be completed to address ODEQ's antidegradation policy (OAR 340-041-0004), which is intended to protect existing beneficial uses. The analysis will provide information to allow reviewers to determine if the Project is in alignment with ODEQ’s Antidegradation Policy

Implementation internal management directive (ODEQ 2001b). Outside of sediment modeling and related turbidity, analysis will be based on existing, available water quality data, and anticipated water quality changes, which will be evaluated qualitatively.

Wetlands and Waters of the United States

The study area and analysis area for wetlands and waters of the state and U.S. will be the site boundary. A desktop analysis of the facility site boundary was performed to identify potential impacts to potentially jurisdictional wetlands and waters of the state and U.S. An analysis of NWI, National Hydrography Dataset (NHD), and the Oregon Department of State Lands (ODSL) Statewide Wetlands Inventory (SWI) suggest that several wetlands and waterbodies exist within the facility site boundary. According to NWI, wetlands include emergent and shrub-scrub wetlands and ponds. Wetland and streams mapped by NWI and NHD in the site boundary are shown in Figure G-3 (Attachment 2).

A formal delineation of wetlands will be conducted to identify potential impacts from the facility's construction on jurisdictional wetlands. In addition, the ordinary high water mark (OHWM) designations for the Columbia and Willamette rivers will be mapped using existing data with field verification. The delineation and assessments will be conducted to meet requirements under the Oregon Removal/Fill Law (ORS 196; OAR Chapter 141, Division 85), Washington Administrative Code (WAC 173-22-035), and Section 404 of the Clean Water Act. A wetland delineation report that provides the information and findings of the delineation will be submitted to the ODSL, Ecology, and USACE.

As discussed above in Exhibit C, HDD would be used to transition the HVDC cable from land into the river, thereby avoiding impacts to potential shoreline wetlands and riparian areas.

The ASC will contain a detailed discussion of the potential impacts to potentially jurisdictional wetlands and waters identified in the wetland delineation and assessment, opportunities to avoid or minimize impacts, required mitigation (if any), and will identify necessary permits. Where impacts may occur, they will be mitigated in accordance with state and federal law.

Fish and Wildlife Habitat

The study area for fish and wildlife habitat areas will be the site boundary plus 0.5 miles. The Applicant conducted desktop review of species and critical habitat protected under the federal ESA, essential fish habitat (EFH), potential presence of marine mammals protected under the Marine Mammal Protection Act (MMPA), and Oregon and Washington special status habitats and species. The Applicant also reviewed preliminary work windows, including the USACE *Approved Work Windows for Fish Protection for Waters Within National Park Boundaries, Columbia River, Snake River, and Lakes by Watercourse* (USACE ND), the Oregon Department of Fish and Wildlife (ODFW) *Oregon Guidelines for Timing of In-Water Work to Protect Fish and Wildlife Resources* (ODFW 2008), and the Washington Department of Fish and Wildlife (WDFW) *Times when Spawning or Incubating Salmonids are Least Likely to be within Washington State Freshwaters* (WDFW 2018). In-water work windows on the Columbia River are generally from November 15 to February 15 in Oregon and January 1 to March 31 in Washington.

Fish and wildlife habitat surveys will be conducted to identify potential impacts from the facility's construction on fish and wildlife. The purpose of the surveys will be to preliminarily identify vegetation communities, wildlife habitat types, and any signs of special-status species or unique habitat features.

Potential impacts to fish and wildlife habitat include water quality degradation. Water quality will be evaluated as discussed above in *Surface and Groundwater*. In addition, as part of the USACE permitting requirements, the Applicant will conduct fish distribution modeling of the Columbia River. Additional information in regard to fish studies and analyses is discussed below in *Sensitive, Threatened, and Endangered Species*.

The cables will be designed to shield against electric fields. Magnetic fields decline in strength in proportion to distance from their source, so are not likely to be detectable except in the immediate vicinity of the cables. Therefore, potential impacts from electric and magnetic fields to aquatic species would be minimal. Studies of underwater cable systems comparable to this facility indicate minimal to no impact on the behavior of aquatic species (BOEM 2016). Additional information regarding the impacts of electric and magnetic fields will be provided in the ASC.

Projects with state nexuses such as transmission lines subject to the Oregon EFSC and the Washington State Energy Facility Site Evaluation Council (EFSEC) processes are required to abide by the ODFW and WDFW habitat mitigation policies. This requires assessing impacts and seeking ODFW and WDFW approval of a habitat mitigation plan. On the basis of the completed biological reconnaissance survey and additional biological surveys, the Applicant will provide a site-specific habitat analysis in the ASC. The analysis will include a habitat mitigation plan approved by both state EFSC/EFSEC agencies in consultation with ODFW and WDFW, with measures to avoid, minimize, and mitigate impacts to wildlife.

Sensitive, Threatened, and Endangered Species

The study area for sensitive, threatened, and endangered species will be the site boundary. Data from various resources were considered to determine the threatened, endangered, and sensitive species that may occur within the site boundary, including the following:

- USFWS Information for Planning and Consultation (IPaC)
- USFWS Critical Habitat for Threatened and Endangered Species Online Mapper, Environmental Conservation Online System
- NOAA Fisheries Protected Resources Application for ESA-listed species' ranges and critical habitat designations, managed by NOAA Fisheries' West Coast Region
- NOAA Fisheries GIS Data for Essential Fish Habitat
- ODFW, Centralized Oregon Mapping Products and Analysis Support System (Compass)
- Oregon Biodiversity Information Center (ORBIC)

A list of special-status species with potential to occur within the site boundary was determined through a desktop analysis and is shown in Table J-2.

The Applicant will complete informal consultation with National Marine Fisheries Service (NMFS; informally known as NOAA Fisheries), USFWS, ODFW, WDFW, and Columbia River Intertribal Fish Commission to obtain input into species distribution, preliminary feedback on impacts and minimization methods, and discuss in-water work timing to gain concurrence with the biological assessments as part of the ESA Section 7 consultation process. This document will address potential effects to listed species such as behavioral changes (i.e., avoidance) as well as the direct impacts to individuals (i.e., mortality) as a result of the project.

Generally, in-water work windows on the Columbia River are from November 15 to February 15 in Oregon and January 1 to March 31 in Washington. In addition, an EFH assessment compliant with the requirements of the Magnuson-Stevens Act will be prepared.

Potential impacts to sensitive, threatened, and endangered species could include permanent or temporary loss of habitat, changed behavior for those in the animal kingdom (e.g., avoidance), or degraded water quality parameters such as turbidity. Water quality will be evaluated as discussed above in *Surface and Groundwater*. In addition, field surveys will be conducted to assess habitat conditions. In the ASC, the Applicant will provide an analysis of potential impacts to sensitive, endangered, and threatened species and opportunities to avoid or minimize impacts to those resources.

Table J-2. Special-Status Species with Potential to Occur within the Site Boundary

Common Name	Scientific Name	Federal Status	State Status
Birds			
American Peregrine Falcon	*Falco peregrinus anatum*	DL	S
Golden eagle	*Aquila chrysaetos*	--	--
Purple martin	*Progne subis*	--	SC
Streaked horned lark	*Eremophila alpestris strigata*	LT	SC
Tricolored blackbird	*Agelaius tricolor*	SOC	--
Fish			
Chinook salmon	*Oncorhynchus tshawytscha pop. 21*	LT	SC
Chum salmon	*Oncorhynchus keta pop. 3*	LT	SC
Coastal cutthroat trout	*Oncorhynchus clarkii pop. 2*		S
Coho Salmon	*Oncorhynchus kisutch pop. 1*	T	LE
Eulachon	*Thaleichthys pacificus*	LT	--
Green sturgeon	*Acipenser medirostris*	SOC	--
Pacific lamprey	*Entosphenus tridentatus*	SOC	S
Steelhead	*Oncorhynchus mykiss pop. 27*	LT	SC
Mammals			
Townsend's big-eared bat	*Corynorhinus townsendii*	No status	SC
Reptiles			
California mountain kingsnake	*Lampropeltis zonata*	SOC	S
Cope's giant salamander	*Dicamptodon copei*	--	S
Northern red-legged frog	*Rana aurora*	--	S
Oregon slender salamander	*Batrachoseps wrighti*	SOC	S
Painted turtle	*Chrysemys picta*	--	SC
Invertebrate Animals			
A caddisfly	*Farula constricta*	--	--
Broadwhorl tightcoil (snail)	*Pristiloma johnsoni*	--	--
California floater (mussel)	*Anodonta californiensis*	SOC	--

Common Name	Scientific Name	Federal Status	State Status
Columbia pebblesnail	*Fluminicola fuscus*	SOC	--
Dalles juga (snail)	*Juga hemphilli dallesensis*	--	--
Johnson's waterfall carabid beetle	*Pterostichus johnsoni*	--	--
Lost River springsnail	*Pyrgulopsis sp. 7*	--	--
Nerite ramshorn (snail)	*Vorticifex neritoides*	--	--
Olympia pebblesnail	*Fluminicola virens*	--	--
Oregon floater (mussel)	*Anodonta oregonensis*	--	--
Puget oregonian (snail)	*Cryptomastix devia*	--	--
Shortface lanx (=Giant Columbia River limpet)	*Fisherola nuttalli*	--	--
Western ridged mussel	*Gonidea angulata*	UR	--
Winged floater (mussel)	*Anodonta nuttalliana*	SOC	--
Vascular Plants			
An ammannia	*Ammannia robusta*	--	--
Barrett's penstemon	*Penstemon barrettiae*	--	C
Columbia bladderpod	*Physaria douglasii ssp. douglasii*	--	--
Columbia lewisia	*Lewisia columbiana var. columbiana*	--	--
Dalles Mt. buttercup	*Ranunculus triternatus*	SOC	--
Dotted smartweed	*Persicaria punctata*	--	--
Hairy water-fern	*Marsilea vestita*	--	--
Hood River milk-vetch	*Astragalus hoodianus*	--	--
Howell's bentgrass	*Agrostis howellii*	--	C
Howell's daisy	*Erigeron howellii*	--	C
Kellogg's dwarf rush	*Juncus kelloggii*	--	--
Moss grass	*Coleanthus subtilis*	--	--
Nevius' onion	*Allium nevii*	--	--
Northern wormwood	*Artemisia campestris var. wormskioldii*	SOC	LE
Nuttall's larkspur	*Delphinium nuttallii*	--	--
Oregon daisy	*Erigeron oreganus*	--	C
Pale bulrush	*Scirpus pallidus*	--	--
Suksdorf's lomatium	*Lomatium suksdorfii*	--	C
Toothcup	*Rotala ramosior*	--	--
Violet suksdorfia	*Suksdorfia violacea*	--	--
White meconella	*Meconella oregana*	SOC	C
White rock larkspur	*Delphinium leucophaeum*	SOC	LE
Yellow lovegrass	*Eragrostis lutescens*	--	--
Nonvascular Plants			
Bent scissor-leaved liverwort	*Herbertus aduncus*	--	--

Federal status codes:
DL = Delisted
LT = Listed Threatened
SOC = Species of Concern
T = Threatened
UR = Under Review

State status codes:
C = Candidate
LE = Listed Endangered
S = Sensitive Species
SC = Critical Sensitive Species

Historic, Cultural, and Archaeological Resources

The study area for historic, cultural, and archaeological resources will be the site boundary. The Applicant will complete an inventory of archeological resources (land and water); an inventory of traditional cultural properties (including properties of traditional significance to Indian tribes and other communities); and an inventory of buildings and structures and other features of the built environment. The inventory will evaluate the presence or absence of historic properties pursuant to

Section 106 of the National Historic Preservation Act (NHPA), along with properties eligible for the Washington Heritage Register and other local registers and other cultural resources that may not meet the threshold of significance necessary to qualify them as historic properties. The study methodology will follow applicable Oregon State Historic Preservation Office (SHPO) and Washington Department of Archaeology and Historic Preservation (DAHP) regulations and will be consistent with U.S. Secretary of Interior Standards for cultural resource surveys and documentation under Section 106 of the NHPA (Public Law 89-665). In addition, as described in Exhibit P, the Applicant will consult with tribes identified by the Legislative Commission on Indian Services to have an interest in the proposed facility.

Any archaeological or historical sites discovered during the field inventory will be officially recorded and filed with the Oregon SHPO. If an archaeological or historic site is identified, the Applicant will undertake the appropriate avoidance, minimization, or mitigation actions to avoid significant impacts.

Scenic and Aesthetic Areas

The study area for scenic and aesthetic areas will be the site boundary plus 10 miles, as shown in Figure G-2 (Attachment 2). Scenic resources and aesthetic areas considered are those “identified as significant or important in local land use plans, tribal land management plans and federal land management plans for any lands located within the analysis area…” (OAR 345-021-0010(1)(r) and 345-022-0080(1)).

Potential impacts to identified scenic resources will likely be negligible because the facility structures will be mostly underground with the exception of the converter stations and a short, aboveground transmission line in Wasco County to connect the converter station to the adjacent Big Eddy substation. These will be sited in previously disturbed and urban areas.

A portion of the Project is located within the Columbia River Gorge National Scenic Area (CRGNSA), which is an 85-mile-long area along both sides of the Columbia River from the outskirts of Portland-Vancouver in the west to Wasco and Klickitat counties in the east. Urban areas, including Cascade Locks, Hood River, Mosier, and The Dalles in Oregon, are exempt from scenic area regulations. Proposed aboveground activities that can be seen from a designated key view area (KVA) are subject to the *Management Plan for the Columbia River Gorge Natural Scenic Area* (CRGNSA) (CRGC 2021). The aboveground utilities associated with this Project within the CRGNSA are located in The Dalles Natural Scenic Area (NSA) Urban Area; therefore, they are exempt from scenic area regulations (CRGC 2022).

The *Wasco County Comprehensive Plan*, as amended (Wasco County 2010), identifies six outstanding scenic and recreational areas in Wasco County. None of these are within the study area other than the CRGNSA. The comprehensive plan also identifies two scenic rivers and eight sections of highway within Wasco County as designated scenic areas, none of which are in the study area.

The *Multnomah County Comprehensive Plan* (Multnomah County and APG 2016) identifies scenic views and scenic waterways as areas of focus for scenic resources, none of which are within the study area.

For the ASC, the Applicant will perform a visual impact assessment of the potential effects of the facility on areas identified and managed as scenic resources or for specific scenic qualities, which will include opportunities to avoid or minimize impacts to those resources and/or proposed mitigation measures for impacts identified.

Recreation

The study area for recreational activities will be the site boundary. Recreation activities include water-dependent recreation such as boat ramps, fishing, swimming, and windsurfing areas, either on shore or within the Columbia River. Additionally, there are high-intensity recreational use areas around the Bonneville Lock and Dam, the Hood River, and the Dalles Lock and Dam.

Impacts to recreation are expected to be minimal because work would be conducted during a time of year when recreation use is at its lowest (in-water work timing to reduce impacts to aquatic species). The high season for visiting boat ramp facilities and fishing, swimming, and windsurfing recreation opportunities is May to September. Recreational fishing in the Columbia River by foot (from fishing spots along the shore) or by boat can be year-round (depending on what is being fished) but mostly occurs outside of the winter months. Boats are required to follow U.S. Coast Guard (USCG) navigation requirements for safety and navigation on water.

As discussed in Exhibit C, in-river construction would be completed by one working vessel (barge or ship) with a support vessel near or adjacent to the existing navigation channel. The barge or ship used for Project construction would be one of many barges and ships that navigate on the Columbia River. The jet plow would operate continuously when allowed and could place up to 1.5 miles of cable per day depending upon the sediment type, current circulation patterns, and river bottom conditions. Temporary cofferdams would be placed to facilitate the transition from HDD to jet plow and vice-versa.

During construction, potential in-water interference or safety issues between Project construction and in-water or onshore recreation activities would be minimized through compliance with existing recreation, navigation, and barge interaction. All vessel traffic will be coordinated through the USCG local notices to mariners. Minimal impacts to onshore recreation activities are anticipated because the converter stations would be placed within areas currently used for agricultural production and in an industrial park, and the cables would be placed within roads ROWs; none of which are recreational areas. If Option 2 (bring on shore the HVDC at Broughton Beach Park east of Hayden Island) is chosen, the temporary HDD pit would be placed in an area away from where most of the recreation occurs at the beach and work would be conducted during a time of year when recreation use is at its lowest. Impacts to recreation during construction are anticipated to be minimal and temporary, occurring during low recreation use. During operation, the cable would be buried below the river bottom and no impacts to recreation activities would occur.

The ASC will include more detailed analysis of the potential impacts to recreation resources, whether the recreational opportunities within the site boundary meet the level of uniqueness or irreplaceability that is required by OAR 345-022-0010(1), and specific opportunities to avoid or minimize impacts to those resources.

Protected Areas

The study area for protected areas is the site boundary plus 20 miles as shown in Figure G-2 (Attachment 2), in accordance with OAR 345-001-0010(59)(e). Protected areas are defined and listed in OAR 345-022-0040. Table J-3 lists protected areas within the study area; there are 101 protected areas located within the site boundary. The facility is not anticipated to significantly affect any protected area because the facility structures will be mostly underground with the exception of the converter stations and a short, aboveground transmission line in Wasco County, which are located within already developed urban areas with similar aboveground facilities. The ASC will include a detailed analysis of the impacts to protected areas, if any, and opportunities to avoid or minimize impacts to those resources.

Table J-3. Protected Areas within 20-miles of the Site Boundary

Type	Area Name	Approximate Distance to Site Boundary (miles)	Direction from Project

Land Use

The study area for land use will be the site boundary plus 0.5 miles. Jurisdictions that require permitting approval include Wasco County, the City of The Dalles, and the City of Portland.

In Wasco County, land within the study area is zoned road right-of-way (ROW), Commercial Light/Industrial (CLI), Industrial (I), and Exclusive Farm Use Zone (A-1) (Wasco County 2016). Construction and operation of the western converter station would require conversion of land zoned for exclusive farm use; these impacts will be evaluated in the ASC.

In the City of The Dalles, land within the study area is zoned road ROW, CLI, I, and Parks and Open Space (P/OS) by Chapter 10.5 of The Dalles, Oregon Municipal Code. The HVDC cable would be placed via HDD under the area zoned as P/OS with a Community Facilities Overlay (CFO) District. The CFO District does not outright prohibit utility facilities and could require determination by The Dalles.

In the City of Portland, land within the study area is zoned Residential Farm/Forest (RF), Heavy Industrial (IH), Open Space (OS), Commercial Employment (CE), Residential 10,000 (R10), Institutional Residential (IR), and Commercial Mixed Use (CM). Land within the study area is also subject to an overlay zone or plan district, historical landmark, or recreational trail (City of Portland Title 33 Planning and Zoning). The western converter station is located in an area zoned IH. The HVDC and HVAC cables entering and exiting the western converter station would be placed via HDD or trench under the remaining areas. Impacts would be temporary during construction and no impacts would occur during operation.

Jurisdictions that are shoreline adjacent in the study area include City of Mosier, Hood River County, City of Hood River, City of Cascade Locks, Multnomah County, City of Fairview, and City of Gresham. The HVDC cable would be buried in the Columbia River adjacent to these shorelines. No impacts to land uses in these jurisdictions would occur.

These jurisdictions are all within the CRGNSA boundary. Agricultural land, forest land, open space, residential land, commercial land, and recreation designations are land designations that are managed under the CRGNSA management plan. As discussed above, proposed aboveground activities that can be seen from a designated KVA are subject to the CRGNSA management plan. The aboveground utilities associated with this Project within the CRGNSA are located in The Dalles NSA Urban Area; therefore, they are exempt from scenic area regulations (CRGC 2022).

During construction, impacts on land use associated with the Project could occur if the Project were to conflict with land use plans, policies or regulations adopted for the purpose of avoiding or mitigating an environmental effect.

During operation, impacts on land use associated with the Project could occur if the Project were to physically divide a community. The Project, once constructed, would not physically divide a community; therefore, no operational impacts on land use are anticipated.

The corresponding land use plans, policies, or regulations of these jurisdictions, including those in the CRGNSA management plan, will be determined and evaluated for consistency in the ASC.

Wildfire Risk

During construction, the use of motorized equipment could increase the potential for wildfire risk at the eastern converter station location where the area is in agriculture production and adjacent to undeveloped areas to the north, east, and south of the converter station. To reduce the potential for construction-related fires, the Applicant will prepare a draft fire prevention and suppression plan to ensure that fire prevention and suppression measures are carried out in accordance with federal, state, and local regulations. By implementing these measures, the Project will not increase fire ignitions. The short segment of overhead transmission line from the Big Eddy substation to the eastern converter station will use transmission line structures that must meet the requirements of the

Public Utility Commission of Oregon Construction Standards and the National Electric Safety Code (NESC). Fire hazards causing wildfire ignitions are more prevalent for distribution and lower-voltage transmission lines than for higher-voltage transmission lines similar to those to be used. The steel towers to be used will not burn and are designed to dissipate lightning strikes. The integrity and grounding and other hardware will be tested on a regular basis during scheduled maintenance, thereby minimizing the potential for fire ignitions.

The remainder of the Project will be constructed and operated in areas of existing road ROW and developed urban areas with little to no risk of wildfire. Other than the short section of overhead line described above, the transmission cable will be buried underground or installed under water. The ASC will contain a detailed discussion of potential wildfire risk along with a wildfire mitigation plan that will identify how construction and operation of the facility will minimize risk of wildfire.

Exhibit K. Community Service Impacts (OAR 345-020-0011(1)(k))

(k) Exhibit K. Information about significant potential adverse impacts of construction and operation of the proposed facility on the ability of communities in the study area to provide the services listed in OAR 345-022-0110.

RESPONSE

Pursuant to OAR 345-001-0020(59)(g), the study area can be considered the site boundary. Public services that will be evaluated for potential impacts from facility construction and operation are listed in OAR 345-020-0011(1)(k):

- Sewers and sewage treatment;
- Water;
- Stormwater drainage;
- Solid waste management;
- Housing;
- Traffic safety;
- Police and fire protection;
- Health care; and
- Schools

Sewers and Sewage Treatment

During construction, sanitary waste will be collected on site in portable toilets that will be provided and maintained by a licensed subcontractor. During operation, there will be minimal discharges of domestic wastewater, to be handled by connection to existing sewers or sewage treatment facilities. The western converter station parcel is served by a municipal sewer and stormwater gravity main within the utility easement that abuts N Leadbetter Road. The status of the eastern converter station sewer connection was unavailable through search of publicly available data.

During operations, approximately 12 full-time employees will be located at each converter station. It is anticipated that the western converter station will discharge to a municipal system. It is unknown if the eastern converter station will discharge to a municipal system or require a licensed, on-site septic system; however, significant impacts to community sewer systems are not anticipated.

Water

As discussed in Exhibit J, the facility will require the use of surface or groundwater during operation for basic facilities (bathroom/kitchen) at each converter station; each location is anticipated to use no more than 115 gallons per day. During construction of the converter stations, approximately 164,000 gallons of water will be required for dust control, compaction, concrete mixing, etc., and approximately 1,395,000 gallons of water will be required for HDD, for a total of approximately 1,559,000 gallons. In the ASC, the Applicant will confirm the anticipated amount of water required for construction and confirm with the municipalities that they and are capable of providing sufficient

water to meet construction needs. During construction, water will only be obtained from permitted sources with adequate water rights. Therefore, public water systems will not be adversely affected by facility construction or operation.

Stormwater Drainage

As discussed in Exhibit J, during construction, temporary impacts from construction stormwater will be managed in accordance with a NPDES 1200-C permit to be issued to ODEQ, and associated ESCP. The converter station components will be located on private land and will not affect the provision of stormwater management services by a public agency. No impact on stormwater drainage is expected from the facility.

Solid Waste Management

The facility will be constructed in and around the incorporated communities of The Dalles and Portland, which provide solid waste management services to their respective areas. Collection, transfer, and recycling services in The Dalles area is by The Dalles Disposal and in the Portland area by Republic Services. Solid waste disposal during construction will be provided through a private contract with local commercial haulers and is not anticipated to disrupt services already being provided in these communities. There are multiple public landfills near Portland, including Fazio Landfill and Recycling and Portland Landfill. The public landfill nearest to The Dalles is the Wasco County Landfill. No impacts to solid waste management are expected from the construction and operation of the facility.

Housing

Construction

An average of 220 employees will be required to construct each converter station, which will be constructed simultaneously. Additionally, between 45 to 60 employees will be needed for the in-river cable installation and 20 employees for the underground cable installation. Most construction workers will be employees of construction and equipment companies under contract to the Applicant. Workers will include a mix of local and nonlocal personnel; the nonlocal personnel will be needed for specialized aspects of construction, such as installation of conversion and control equipment as well as system testing and commissioning. It is expected that the specialized workers will come from outside the study area and will require temporary housing such as local motels, trailer parks, or other rental units. This increased demand for temporary housing could potentially have impacts if the temporary housing supply cannot meet the demand. The Applicant would prefer to hire locally, which will depend on the availability of workers with appropriate skills. Additional workers may commute daily from communities outside the study area, which will lessen the impact on temporary housing.

Typical housing options for temporary workers include motels, hotels, apartments, short-term rental homes, and campgrounds where workers can park trailers or other mobile housing. Both The Dalles and Portland have hotels and motels and there are many RV parks and campgrounds in the vicinity. Because workers can spread out to many communities within a commutable distance, the impact to housing in the immediate vicinity of the facility would be lessened. Workers from outside the area will benefit the communities and local businesses by renting rooms or campgrounds, eating at local restaurants, and purchasing goods and services.

Operations

There will be approximately 12 full-time employees at each converter station, plus approximately 30 additional seasonal contract workers. Where possible, the operations staff will be hired locally, except for those positions that require previous experience with converter station operations. Seasonal contract workers would be needed for supplemental staffing during annual maintenance periods. They would perform a variety of tasks such as cleaning insulators, performing fire protection testing, grounds maintenance, etc. It is assumed that operations will continue for at least 25 years; however, there are existing HVDC projects that have been in operation for 40 years or more. No impacts are anticipated as a result of housing operational personnel.

Traffic Safety

Eastern Converter Station

The Dalles is located along I-84, which parallels SR 30. SR 197 intersects SR 30 and I-84 on the east side of The Dalles. The eastern converter station is accessible from SR 197 and Columbia View Drive. These routes will carry most of the construction-related heavy-duty and light-duty delivery vehicles, as well as some workforce traffic.

During construction, trucks use these transportation corridors. Heavy-duty trucks will carry converter station components. Light-duty trucks will deliver electrical equipment and other materials.

Construction-related vehicles are not expected to cause traffic safety hazards. If determined necessary, a traffic management plan will be developed in cooperation with The Dalles to minimize impacts to traffic safety. In addition, the Applicant may enter into road use agreements with Wasco County to ensure that public roads impacted by construction will be left in “as good or better” condition than existed prior to the start of construction.

During operations, traffic impacts from converter station employees are not anticipated because of the small number of permanent employees. Employees will travel to work in their personal vehicles on local roads. Light-duty trucks and delivery trucks may be used infrequently when converter station components need to be serviced on site.

Western Converter Station

The Rivergate Industrial District is located in an area of North Portland accessed by I-5 and N Columbia Boulevard, I-5 to Oregon State Route 120 (SR 120) to N Columbia Boulevard, or I-5 to N Marine Drive to N Leadbetter Road.

During construction, trucks will use these routes to transport most of the construction-related, heavy-duty and light-duty delivery vehicles as well as some of the construction workforce traffic. Heavy-duty trucks will carry converter station components. Light-duty trucks will deliver electrical equipment and other materials.

Construction-related vehicles are not expected to cause traffic safety hazards. The Applicant would obtain a Temporary Street Use Permit from Portland Bureau of Transportation, which depending on the complexity of the road closure, if any, would require a traffic control plan and compliance with the traffic manual.

During operations, traffic impacts from converter station employees are not anticipated because of the small number of permanent employees. Employees will travel to work in their personal vehicles on local roads. Light-duty trucks and delivery trucks may be used infrequently when converter station components need to be serviced on site.

In-Water Construction
During construction, potential in-water traffic would be minimized through compliance with existing recreation, navigation, and barge interaction. Vessel traffic will be coordinated through the USCG local notices to mariners. As discussed above, impacts to water recreation during construction are expected to be minimal; the work would be conducted during low recreation use (in-water work windows).

An analysis of traffic generated from construction and operation will be included in the ASC.

Police and Fire Protection

The Wasco County Sheriff's Department serves the eastern converter station. The Multnomah County Sheriff's Department serves the western converter station area. The number of temporary and permanent employees is not anticipated to place significant demands on law enforcement agencies in the area.

The facility will be equipped with fire protection systems and equipment in accordance with Oregon Fire Code and municipal codes in Portland and The Dalles. Given the inherent fire safety features of the facility, significant demands on fire protection resources are not anticipated.

Health Care

The nearest hospital to the eastern converter site is Mid-Columbia Medical Center, located approximately 4.5 miles from the facility at 11700 E 19th Street in The Dalles. Ambulance service is provided by Mid-Columbia Medical Center, which is approximately 4.5 miles from the eastern converter station (Mid-Columbia Medical Center 2022). Emergency airlift provides service from Life Flight Network at Dallesport, which is approximately 3 air miles from the eastern converter station (Life Flight Network 2022).

The western converter site is located approximately 9 miles from the Legacy Good Samaritan Medical Center at 1015 NW 22nd Avenue in Portland. It is assumed that ambulance service is provided by the Legacy Good Samaritan Medical Center, which is approximately 9 miles from the western converter station (Legacy Health 2022). Life Flight Network provides emergency airlift service from the Aurora State Airport, approximately 25 miles south of the western converter station.

Impacts on local health care services during both construction and operation will be minimized by careful management of site health and safety risks. The approximate number of temporary and permanent employees is not expected to place significant new demands on the healthcare facilities that serve the facility areas.

Schools

Dry Hollow Elementary School, The Dalles Middle School, and The Dalles High School are the closest public schools to the eastern converter station location. Sitton Elementary school, George

Middle School, and Roosevelt High School are the closest schools to the western converter station location.

No significant adverse impacts to schools are anticipated during facility construction and operation. Construction will be temporary and short term (24 months) at both converter station locations, and it is expected that much of the peak work period will occur during the summer months when school is not in session. Consequently, students are not expected to relocate to the area as a result of construction.

During facility operations, there would be minimal (if any) increase in the local school populations due to the small number of permanent employees, most of whom are expected to be from the local area.

Exhibit L. Water Sources and Use (OAR 345-020-0011(1)(l))

(l) Exhibit L. Information about anticipated water use during construction and operation of the proposed facility, including:

(A) A description of each source of water and the applicant's estimate of the amount of water the facility will need from each source.

RESPONSE

As discussed in Exhibits J and K, during construction of the converter stations, approximately 164,000 gallons of water will be required for dust control, compaction, concrete mixing, etc., and approximately 1,395,000 gallons of water will be required for HDD, for a total of approximately 1,559,000 gallons. Water will be obtained from existing sources such as the City of The Dalles and the City of Portland. The construction contractor will be responsible for identifying water sources and ensuring any needed permits or approvals are obtained prior to construction. In the ASC, the Applicant will confirm the anticipated amount of water required for construction and confirm with the municipalities that they and are capable of providing sufficient water to meet construction needs.

During operation, approximately 115 gallons of water will be required daily for control rooms with basic facilities (bathroom/kitchen) at each converter station.

(B) If a new water right is required, the approximate location of the points of diversion and the estimated quantity of water to be taken at each point.

RESPONSE

At this time, it is not anticipated that the facility will require new water rights.

(C) For operation, the source of cooling water and the estimated consumptive use of cooling water, based on annual average conditions.

RESPONSE

No cooling water will be required for facility operation. Therefore, these rules are not applicable.

Exhibit M. Carbon Dioxide Emissions (OAR 345-020-0011(1)(m))

(m) Exhibit M. If the proposed facility would emit carbon dioxide, an estimate of the gross rate of carbon dioxide emissions, a table listing all the factors that form the basis for calculating the estimate, and a statement of the means by which the applicant intends to comply with the applicable carbon dioxide emissions standard under OAR 345-024-560, 345-024-600, or 345-024-630.

RESPONSE

The facility will not emit carbon dioxide. Therefore, these rules are not applicable.

Exhibit N. Evaluation of Statutes, Rules, and Ordinances (OAR 345-020-0011(1)(n))

(n) Exhibit N. Identification, by legal citation, of all state statutes and administrative rules and local government ordinances containing standards or criteria that the proposed facility must meet for the Council to issue a site certificate, other than statutes, rules and ordinances identified in Exhibit E, and identification of the agencies administering those statutes, administrative rules and ordinances. The applicant shall analyze and describe any problems the applicant foresees in satisfying the requirements of any such statute, rule or ordinance.

RESPONSE

The state statutes, administrative rules, and local government ordinances containing standards or criteria that the Applicant must meet for EFSC to issue a site certificate, beyond the statutes, rules, and ordinances identified in Exhibit E, are identified in Table N-1. Applicant does not anticipate any difficulty in meeting the specific requirements.

Cascade Renewable Transmission, LLC

Under Section 203 of the Limited Liability Company Law

THE UNDERSIGNED, being a natural person of at least eighteen (18) years of age, and acting as the organizer of the limited liability company hereby being formed under Section 203 of the Limited Liability Company Law of the State of New York certifies that:

FIRST: The name of the limited liability company is:

Cascade Renewable Transmission, LLC

SECOND: To engage in any lawful act or activity within the purposes for which limited liability companies may be organized pursuant to Limited Liability Company Law provided that the limited liability company is not formed to engage in any act or activity requiring the consent or approval of any state official, department, board, agency, or other body without such consent or approval first being obtained.

THIRD: The county, within this state, in which the office of the limited liability company is to be located is ALBANY.

FOURTH: The Secretary of State is designated as agent of the limited liability company upon whom process against it may be served. The address within or without this state to which the Secretary of State shall mail a copy of any process against the limited liability company served upon him or her is:

c/o PowerBridge, LLC
501 Kings Hwy East
Suite 300
Fairfield, CT 06825

FIFTH: The limited liability company is to be managed by: ONE OR MORE MANAGERS.

SIXTH: The existence of the limited liability company shall begin upon filing of these Articles of Organization with the Department of State.

SEVENTH: The limited liability company shall have a perpetual existence.

EIGHTH: The limited liability company shall defend, indemnify and hold harmless all members, managers, and former members and managers of the limited liability company against expenses (including attorney's fees, judgments, fines, and amounts paid in settlement) incurred in connection with any claims, causes of action, demands, damages, liabilities of the limited liability company, and any pending or threatened action, suit, or proceeding. Such indemnification shall be made to the fullest extent permitted by the laws of the State of New York, provided that such acts or omissions which gives rise to the cause of action or proceedings occurred while the Member or Manager was in performance of his or her duties for the limited liability company and was not as a result of his or her fraud, gross negligence, willful misconduct or a wrongful taking. The indemnification provided herein shall inure to the benefit of successors, assigns, heirs, executors, and the administrators of any such person.

I certify that I have read the above statements, I am authorized to sign these Articles of Organization, that the above statements are true and correct to the best of my knowledge and belief and that my signature typed below constitutes my signature.

RE: Power transmission line placement along Oregon Route 197 (OR197) and Federal Route 30 (US30)

Thank you for meeting with CRT LLC in your office and at proposed transmission line locations on June 30, 2022. We appreciate your clarity, assistance, and insights during our visit. This letter is to confirm and memorialize our agreement on a suitable route and construction methods for transmission line placement along OR197 and US30.

As discussed, Cascade Renewable Transmission, LLC, is in the early stages of evaluating an underground transmission line beneath the bed of the Columbia River, referred to as the Cascade Renewable Transmission System (Project). The proposed Project is a high-voltage direct current (HVDC) 1,100-megawatt (MW) electric transmission facility interconnecting the existing Bonneville Power Administration (BPA) Big Eddy 500-kilovolt (kV) AC substation located in The Dalles, Oregon (Eastern Interconnection), and the existing Portland General Electric (PGE) Harborton 230-kV substation located in Portland, Oregon (Western Interconnection). The 1,100-MW HVDC project would follow a east-west route primarily buried under the bed of the Columbia River.

The transmission line will have portions on land at both ends and around Bonneville Dam, in Washington State. The land portion at the east end is in The Dalles along OR197 and US30, as depicted in the attached sketch titled "Transmission Line Route: OR197 & US30". The transmission line will be underground and placed by either open trenching/back fill or horizontal directional drilling (HDD). CRT, LLC understands that ODOT does not allow utilities beneath the active roadway section or in locations that would impair the State's ability to operate and maintain the highway system.
The placement we agreed to from south to north includes:

- Placing the transmission line by open trenching at base of fill or in ditch lines along most of the approximately 1.3-mile route from the Celilo Complex access road to E. 2nd Street as depicted in the attached sketch.
- HDD across the OR197 from southeast ditch at the intersection of Fremont Street/Columbia View Drive to the northwest ditch.
- HDD across OR197 to the triangular median in the OR197/US30 intersection, then again along US30 to the vacant lot ODOT owns west of Big Jim's Diner.
- Open trench across the vacant lot to East 2nd Street which is local jurisdiction.

In the HDD segments, the transmission line will either be placed outside the guardrail or deep enough to not interfere with guardrail posts. In general, we will employ best efforts to keep the bore outside the guard rail system with the exception of when needed to meet the temporary intermediate drill pit as indicated on the drawing. For this section, the bore will intrude under the paved roadway in order to achieve the required arc to follow the roadway.

At the box culvert south of the OR197/US30 intersection, the transmission line will be over the box culvert then a retaining wall would be built that spans the culvert to retain fill to cover the transmission line.

If you concur with this description of the route and construction methods described, please sign below and return a copy of this letter to me at the address provided in the letterhead or by email to chocker@PowerBridge.us

Sincerely,

Christopher Hocker
Vice President of Planning

Date: 7/29/22

Pat Cimmiyotti
Acting District 9 Manager
Oregon Department of Transportation
3313 Bret Clodfelter Way
The Dalles, OR 97058

My signature above confirms District 9 support of placing the proposed utility as shown on the attached conceptual drawing. Details of the placement as the exact location, depth and other conditions will be determine through the district permitting process.

Good morning Jennifer –

Please accept my apology for the delayed reply. Among the nine federally recognized tribes of Oregon, I would suggest you consult with:

- Confederated Tribes of Grand Ronde
- Confederated Tribes of Siletz
- Confederated Tribes of the Umatilla Indian Reservation
- Confederated Tribes of Warm Springs Reservation

Thank you –

Patrick Flanagan
Executive Director
Legislative Commission on Indian Services
Oregon State Capitol, Room 167
(503)986-1067

Hello Patrick,

I am following up to see if the LCIS is able to assist us in identifying the Indian tribes in Oregon whom may hold an interest in the Cascade Renewable Transmission System project. Please let me know if you would like me to resend our original letter.

Thank you,
Jen

Subject: Cascade Renewable Transmission System - Indian tribal consultation

Hello Patrick,

I am sending the attached letter on behalf of Cascade Renewable Transmission, LLC, who is proposing to construct and operate a new underground transmission line beneath the Columbia River. Cascade Renewable Transmission is seeking your assistance in identifying the Indian tribes in Oregon whom may hold an interest in this project, which is subject to multiple regulations including Section 106 of the National Historic Preservation Act and the Oregon Administrative Rules.

Please let me know if you have any questions about our request.

Thank you,
Jen
