Subject: Public Comment on Radioactive Waste Transportation Fee Rulemaking

EFSC,

I am **writing in support** of the OR DOE's Radioactive Waste Transportation Fee Rulemaking. **Rail carriers** should also be included in the fee rulemaking, for the same reasons other shippers will be. The fact that rail businesses are voicing strong opposition is to be expected, and should not be cause for exemption.

The state of Oregon **must fund emergency preparedness and response**, especially in light of the dramatic increase in shipments of nuclear waste from the Hanford Nuclear Site that is expected. I live within walking distance of both an interstate highway (I84) and two very active railroads (along the Columbia River, one on the WA side and one on the OR side). Both highway transporters and trains have created disasters already in our community, dumping toxic chemicals and igniting wildfires. Nuclear waste accidents would [will] be MUCH worse. ALL carriers need to pay into a fee structure that robustly funds emergency preparedness and emergency response.

I also urge EFSC to ensure that **carriers of liquid radioactive waste** through the state pay a larger fee since liquid waste poses a larger risk than solidified waste. Gov. Kotek previously noted, in writing to the Tri-Party Agencies re: Holistic

Negotiations, that “Oregon has significant concerns about the inherent risk of transport of liquid waste.”

Thank you for the opportunity to comment on this rulemaking. Kindly let me know that you’ve received my comments and added them to the official record.

Bonnie New

Dear Energy Facility Siting Council,

Columbia Riverkeeper is a non-profit organization with a mission to restore and protect the water quality of the Columbia River and all life connected to it, from the headwaters to the Pacific Ocean. Columbia Riverkeeper has over 25,000 members and supporters who live, work, and recreate throughout the Columbia River Basin, including thousands of members and supporters in Washington. On behalf of our members in Oregon and Washington, Columbia Riverkeeper transmits the collected, attached **892 comments** gathered through our website and virtual outreach.

The language of the comment is included below. Many signers added their own personalized comments, which are included in a table to ease your review. **Please consider these as individual comments.**

Sincerely,

A handwritten signature in black ink, appearing to read "Simone", written in a cursive style.

Simone Anter, Senior Attorney & Hanford Program Director
Columbia Riverkeeper
simone@columbiariverkeeper.org

Dear Energy Facility Siting Council,

I am very supportive of the Oregon Department of Energy's Radioactive Waste Transportation Fee Rulemaking. I also strongly support the inclusion of rail carriers within this rule, despite the industry pushback.

Shipments of nuclear waste from the Hanford Nuclear Site are expected to increase exponentially as tank operations advance. Somewhere between 60 to 110 shipments per year are expected to originate just from the 200 West project alone. In comparison, from 2023 to 2024, the Oregon Department of Transportation reported a total of 349 radioactive shipments through the state. It is imperative that the state of Oregon fund emergency preparedness and response in light of this increase.

I also urge EFSC to include a larger fee on carriers of liquid radioactive waste through the state, which poses a larger risk than solidified waste. In 2024, Governor Kotek wrote to the Tri-Party Agencies in response to Holistic Negotiations that, "Oregon has significant concerns about the inherent risk of transport of liquid waste." It remains an open question whether increased waste shipments from Hanford will contain waste in a solid or liquid form and Oregon should be prepared to respond to either.

Sincerely,

#	Contact Name	Date	City	State	Additional Comments
1	Talcott, Diana	6/16/26	Portland	OR	As an Oregon resident living within 100 yards of a train track that will be directly impacted by any increase in hazardous rail transport, I strongly support increased fees to provide training and protective equipment for first responders as well as more protection for the impacted tribes. Public notification is also critical as well as increased regulation around rail equipment that will be used for hazardous material transport. Please consider public safety above railroad profits.

Charge them up the arse.

Our nation is creating the false pretense that nuclear fission is a safe, clean, reliable and carbon-free process. Each one of these points is untrue: from nuclear accidents and incidents, both big and small for 70 years the conclusion follows that it is not safe; the recent Harvard study headed by Yazan Alwadi shows that living near fissioning reactors or other installations is damaging to all biota (like you and me); Hot summers and cold winters (because of scarce, warm water and frazile ice) can shut down Nuclear Power Plants; and CO2 is emitted all along the process from mining to High-Level Radioactive Waste (HLRW) -- spent fuel -- storage. In the first place, no more places for nuclear power support or use should ever be sited. And in the second place, Oregon must protect itself and the Columbia River from the horrible practice of transporting radiating packages through its forests, deserts, wetlands and human communities. One accident with this terrifying, radioactive menace can wipe out a state's whole emergency budget and beyond. Please prepare your emergency first-responders and your towns and roads in case of radioactive transportation accidents.

Transporting radioactive waste presents a huge risk to people and our planet and fees should be increased to account for the increased risk.

would rather no waste transported, but if it does, make it as safe as possible

I support increased fees on carriers of radioactive waste!

268	Howard, John	6/16/26	Brookings	OR	This would provide one more step in protecting the environment and us.

Stop all the insanity . Use Marcus Schulze Voting and Universal Basic Income to meet UDHR. 21.3 rights .

I would like to know EXACTLY where this material is going??

Transporting waste through our state poses potential risks and impacts to the public and increased fees will help to offset some of those risks and impacts. Private companies benefited from the nuclear energy and need to pay for its disposal.

Tax and increase fees on radioactive waste transport where ever it is in the US!!

Having followed the Hanford case for 20 years,\ and given major support to Friends of Columbia River Gorge, I especially appreciate the careful testimony offered by Riverkeepers. Over the years I have been impressed by the dogged work that citizen organizations with their staffs have mounted to stand up to powerful economic cost-cutting interests. Please leave no loop-holes. Thank you

They should have to pay for what they pollute. This extra fee would help insure the funds are available.

As the rate of shipping increases, It's essential that the funding of mitigation resources be in place to ensure a rapid response. As we know from the derailment disaster in Ohio a few years ago, advanced preparation and fast response are key.

The genie called nuclear waste is out of the bottle and it is our responsibility to reign it in before it permanently compromises our health. / The transportation of nuclear waste must proceed with the utmost caution and scrutiny. No accidents must occur during transit and to insure the safest transit no shortcuts in procedure and only the highest quality RR vehicles; cost will be a factor and funding has to be sufficient enough to produce only the highest quality effort. The state of Oregon must have its own panel of experts apart for the industry. There can't be any conflict of interest

These shipments are scary because the impacts of a sill are potentially catastrophic for all sectors of industry and citizens for thousands of years !!! A ready and robust response plan/team MUST be in place before such increases begin.

Transporting hazardous waste should provide enough fees to cover any disaster that may happen.

When an accident happens, it's always creates huge unexpected costs. Just look back to all the nuclear incidents.

There is no safe nuclear waste and it's insanity not to prepare for the worst when it comes to transporting it!
