HIGHER EDUCATION COORDINATING COMMISSION

Tuition Equity at Oregon Public Universities: Oregon Revised Statute 352.287

This report was prepared by Amy G. Cox, Shanda Haluapo, Vern Mayfield, and Betsy Simpkins in the Office of Research and Data at the Oregon Higher Education Coordinating Commission, July 2023.

PREFACE

Oregon Revised Statute (ORS) 352.287 expands eligibility to in-state resident tuition and fees at public universities to two groups of students who spent substantial portions of their childhood in Oregon but would not be eligible for in-state resident tuition. These two groups are: (1) those who are not citizens or lawful permanent residents of the United States or who are financially dependent upon a person who is not a citizen or a lawful permanent resident of the United States and (2) those who are citizens or lawful permanent residents of the U.S. but who resided outside of Oregon while serving in the Armed Forces of the United States. The expanded eligibility program is known as "Tuition Equity."

This report fulfills a statutory requirement to provide information about the number of students participating in the program and its financial impact on the public universities. Previous reports described substantial growth in the program since its implementation in 2013-14, substantial financial savings for eligible students, and the potential for fiscal benefits and costs to the institutions.

The statute requires an annual report to the Legislature that includes the number of students who applied and were accepted into public universities under the program and the financial impact on the universities of the program. The report should be of interest to Legislators and the Governor, to students, to leadership and staff at Oregon's public universities, and to policymakers and scholars in the fields of postsecondary education, especially as it relates to immigrants and veterans.

In the context of this report, we note that Oregon's public universities offer other tuition-related programs in addition to the Tuition Equity program, particularly for veterans. Some of these programs are unique to the university, some are based on state legislation enacted prior to the 2013 House Bill 2787, and others are national programs.

As the single state entity responsible for ensuring pathways to postsecondary success for Oregonians statewide, the HECC sets state policy and funding strategies, administers numerous programs and over $2 billion annually of public funding, and convenes partners working across the entire postsecondary arena to achieve state goals. More information about HECC can be found at www.oregon.gov/highered. Questions about the HECC should be directed to info.HECC@state.or.us, and questions about this report should be directed to the Director of the Office of Research and Data, Amy Cox, at amy.cox@hecc.oregon.gov.

EXECUTIVE SUMMARY

Oregon Revised Statute (ORS) 352.287 expands eligibility to in-state resident tuition and fees at public universities to two groups of students who spent substantial portions of their childhood in Oregon but would not be eligible for in-state resident tuition. These two groups are: (1) those who are not citizens or lawful permanent residents of the United States or who are financially dependent upon a person who is not a citizen or a lawful permanent resident of the United States and (2) those who are citizens or lawful permanent residents of the U.S. but who resided outside of Oregon while serving in the Armed Forces of the United States. The program allows otherwise eligible noncitizens to pay in-state tuition when citizenship status is their only obstacle to doing so and allows otherwise eligible veterans to pay Oregon resident tuition without having to re-establish Oregon residency. The expanded eligibility program is known as "Tuition Equity."

This report fulfills a statutory requirement to provide information about the number of students participating in the program and its financial impact on the public universities. Previous reports described substantial growth in the program since its implementation in 2013-14, substantial financial savings for eligible students, and the potential for fiscal benefits and costs to the institutions.

The current report finds that during the first nine years of the Tuition Equity program, the number of students participating rose from 116 in 2013-14 to 964 students in 2021-22. As in previous years, the majority of these students in 2021-22 were veterans, and the vast majority were undergraduates. The impact on these students and their families of paying in-state tuition and fees is large, averaging $19,535 per year of full-time undergraduate enrollment in 2021-22.

The financial impact on institutions is also potentially large, but this impact may be positive, negative, or both. The maximum possible benefit to the institutions—realized if all students in the program would not have enrolled at the university without the program's benefits—was $9,472,997. The maximum possible cost to the institutions—realized if all students in the program would have enrolled at the university without the program and paid nonresident rates—was $15,692,624. These potential impacts have risen as the number of students enrolled in the program has risen.

Tuition Equity improves affordability for two important groups of students: noncitizens who spent much of their childhood in Oregon and veterans who left the state to serve in the armed forces. On its own, the Tuition Equity program does not solve the college affordability crisis. It serves only about 1.5 percent of admitted university students. However, for each of these eligible students, it does enable tens of thousands of dollars in savings. This is a positive impact for their college affordability and for their upward mobility, as these two groups can face substantial barriers to completing a postsecondary credential. We note that these positive impacts may come at the cost of the universities, which depend on tuition and fees as a source of revenue, though we also note that the program may increase this revenue by enabling some students to attend who otherwise could not.

INTRODUCTION

BACKGROUND

Oregon Revised Statute (ORS) 352.287 expands eligibility to in-state resident tuition and fees at public universities to two groups of students who spent substantial portions of their childhood in Oregon but would not be eligible for in-state resident tuition. These two groups are: (1) those who are not citizens or lawful permanent residents of the United States or who are financially dependent upon a person who is not a citizen or a lawful permanent resident of the United States and (2) those who are citizens or lawful permanent residents of the U.S. but who resided outside of Oregon while serving in the Armed Forces of the United States. The program allows otherwise eligible noncitizens to pay in-state tuition when citizenship status is their only obstacle to doing so and allows otherwise eligible veterans to pay Oregon resident tuition without having to re-establish Oregon residency.

The expanded eligibility program is known as "Tuition Equity." It began in the 2013-2014 academic year after the Oregon Legislative Assembly passed House Bill 2787 (2013). Eligibility for in-state tuition and fees applies to both undergraduate- and graduate-level work at Oregon public universities. Students who are eligible for the program establish eligibility one time and maintain eligibility for up to five calendar years from the date of initial enrollment in the program, including transfers to another public university.

The eligibility criteria for noncitizens and their dependents are:

- High school diploma from an Oregon high school, or high school equivalency completed in Oregon
- Attendance at an Oregon elementary, middle, or high school for each of the three years immediately preceding high school completion
- Attendance at a U.S. elementary, middle, or high school for each of the five years immediately preceding high school completion
- Demonstrated intent to become a lawful permanent resident or citizen of the United States

The eligibility criteria for veterans are:

- Served in the U.S. Armed Forces with an honorable or general discharge;
- High school diploma from an Oregon high school, or high school equivalency completed in Oregon
- Attendance at an Oregon elementary, middle, or high school for each of the three years immediately preceding high school completion

- Attendance at a U.S. elementary, middle, or high school for each of the five years immediately preceding high school completion

Eligible Veterans for the Tuition Equity program can also be eligible for other veteran programs that offer resident tuition and fees for nonresident Veterans. Appendix A shows the eligibility requirements of other programs that offer resident tuition and fees for nonresident Veterans.

The statute requires the submission of an annual report to the Legislative Assembly that includes: (a) the number of students who applied and were accepted into public universities under the provisions of this Legislation and (b) the financial impact on the universities of this program. This report fulfills that requirement and also provides information on the impact of the program on students and on the program's use and impacts since its inception.

PREVIOUS FINDINGS

The 2022 annual report on HB 2787 found statewide growth in the number of students participating in Tuition Equity, from 2013-14 through 2020-21, with all seven public universities enrolling students under the Tuition Equity program. While these students represent a small numerical subgroup of admitted students (1.2 percent of the total resident student body in 2020-21), the Tuition Equity program provided substantial savings for the students receiving the tuition exemption. Most Tuition Equity students are undergraduate students.

Financial impacts to the universities can come in two forms: (1) a fiscal benefit from increased enrollment, if students enrolled at the institution because of the program's eligibility, or (2) a fiscal cost (i.e., the difference between resident and nonresident tuition), if students would have enrolled at the institution even without the program. Summing this impact across all seven public universities, the maximum potential benefit to the institutions in 2020-21 was $8,805,504, and the maximum potential cost was $14,401,295.

DATA & METHODS

This report presents the use and fiscal impact of the Tuition Equity program from its implementation in 2013-14 through the most recent data available, 2021-22. Specifically, the report includes the following:

- The number of students participating in Tuition Equity
- The average savings per student for those participating in Tuition Equity
- The range of financial impacts on the institutions of Tuition Equity

We use two sources of data to measure these metrics: (1) student records submitted to the HECC by the individual institutions and (2) tuition and fees information published by each institution.

Available data do not provide information about the influence of the program on students' decisions to enroll at the universities. Without the program, students may have paid nonresident tuition at the public university, may have enrolled in an institution that had easier or no

residency requirements instead of a public university, or may not have enrolled in postsecondary education at all.[1] Therefore, the financial impact to the public universities may be positive, negative, or both, and we present the range of these potential impacts.

Throughout this report, we present tuition and fee data as their published amounts. In reality, institutions discount these costs for many students by providing institutional financial aid. We do not take into account those discounts when assessing the financial impacts on students or on institutions because the discounts would likely be different if the program did not exist.

USE AND IMPACT OF TUITION EQUITY

OVERVIEW

Over the first nine years of the Tuition Equity program, the number of students participating rose from 116 in 2013-14 to 964 students in 2021-22. More veterans are enrolled in the program than noncitizens, and undergraduates make up the vast majority of students in the program.

The resident tuition due to the institutions by both undergraduate and graduate students in the Tuition Equity program ranged from $651,864 in 2013-14 to $9,472,997 in 2021-22 statewide. These numbers represent the increased revenue institutions would have received if students enrolled because of the program; it represents the maximum possible benefit.

Regarding the potential cost to the institutions, the difference between resident and nonresident tuition for students who benefited from the Tuition Equity program ranged statewide from $1,258,203 in 2013-14 to $15,692,624 in 2021-22. This represents the maximum possible cost of the program.

Tuition Equity also results in substantial savings for students, with undergraduate students saving between $9,274 and $20,085 in 2013-14 and between this $12,690 to $26,044 in 2021-22, depending on their institution of attendance. Over the course of a bachelor's degree program, the total savings for an individual student and their family is tens of thousands of dollars.

STUDENT ACCESS & AFFORDABILITY

The number of students who participated in Tuition Equity across the Oregon public universities has risen greatly since the program began. In 2013-14, 116 students benefited from the Tuition Equity program, and this number had risen to 964 students in 2021-22 (Figure 1, below). The number rose steadily through 2019-20, fell slightly in 2020-21, and then rose again in 2021-22. The recent slight decline and increase mirrors the patterns of enrollment at the universities during the COVID-19 pandemic. The earlier increases and more recent levelling off have occurred

[1] As Perez (2007) notes, many students are not aware of their undocumented status until they face a structural constraint, such as being unable to secure a job or internship or when applying to college. Facing this constraint could force children of immigrants in particular to choose the most affordable postsecondary option. (Perez, W. (2009). *We are Americans: Undocumented students pursuing the American dream*. Stylus Publishing, LLC.)

in both the noncitizen and veteran components of Tuition Equity. The veteran component enrolls more students than the noncitizen component and has every year of the program.

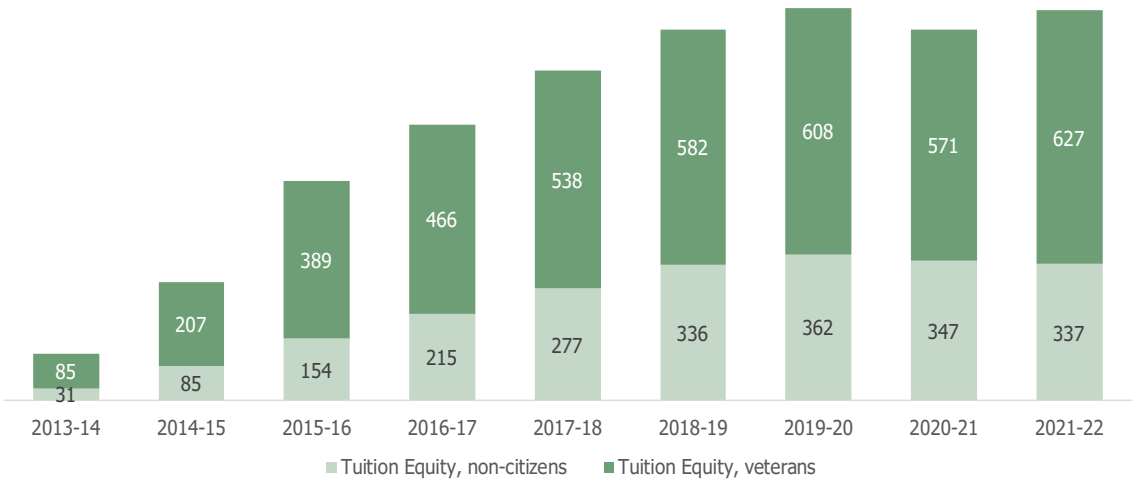

FIGURE 1. PARTICIPATION IN TUITION EQUITY, BY PROGRAM COMPONENT AND YEAR, 2013-14 THROUGH 2021-22.
Source: HECC analysis of student records.

The rising number of students participating in Tuition Equity also represent a rising percentage of the student body. Figure 2 shows the steady increase in the Tuition Equity participation, compared to the total number of admitted undergraduate and admitted graduate students. This percentage has increased nearly every year, though the number of students in the program amounted to only 1.5% of all admitted students in 2021-22.

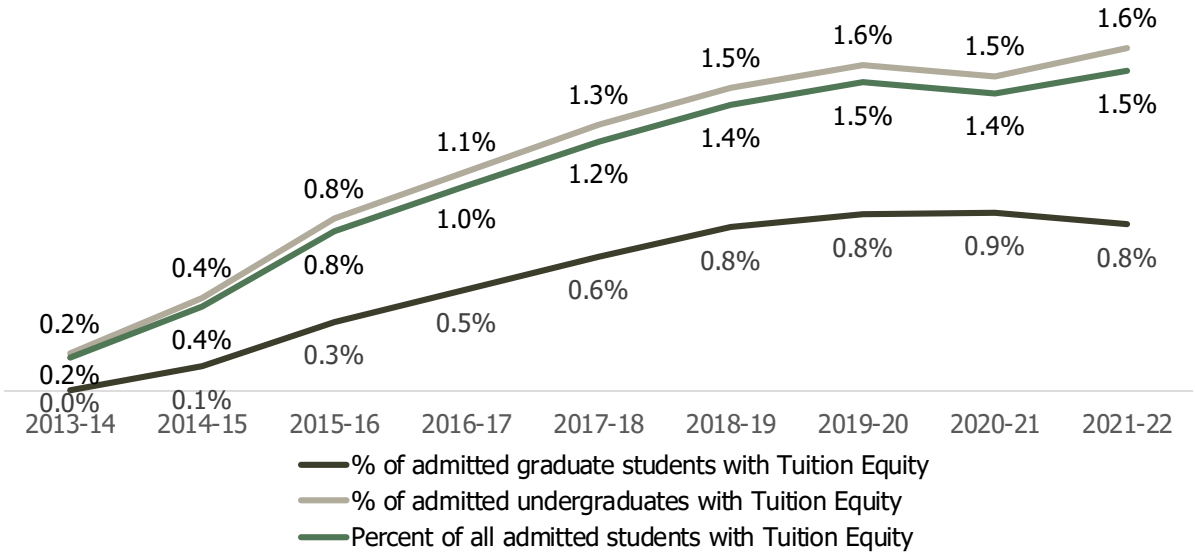

FIGURE 2. PERCENTAGE OF ADMITTED STUDENTS IN TUITION EQUITY PROGRAM, BY STUDENT LEVEL AND YEAR, 2013-14 TO 2021-22.
Source: HECC analysis of student records.

Undergraduate students made up the vast majority of those participating in the program. In 2013-14, all of the 116 students were undergraduates and in 2021-22, 93 percent of students in the program were undergraduates. In 2021-22, the number of undergraduates and graduates rose in both programs except for the number of graduate students in the noncitizen component, which fell. Appendix B shows participation by student level and program component for all years.

Not all students receiving Tuition Equity attended full-time. Among undergraduates in the program, the number of full-time equivalent (FTE) students rose from 75 in 2013-14 to 689 in 2021-22, as shown in Figure 3 below. Appendix B provides more detail in the undergraduate FTE of each component by year and institution.

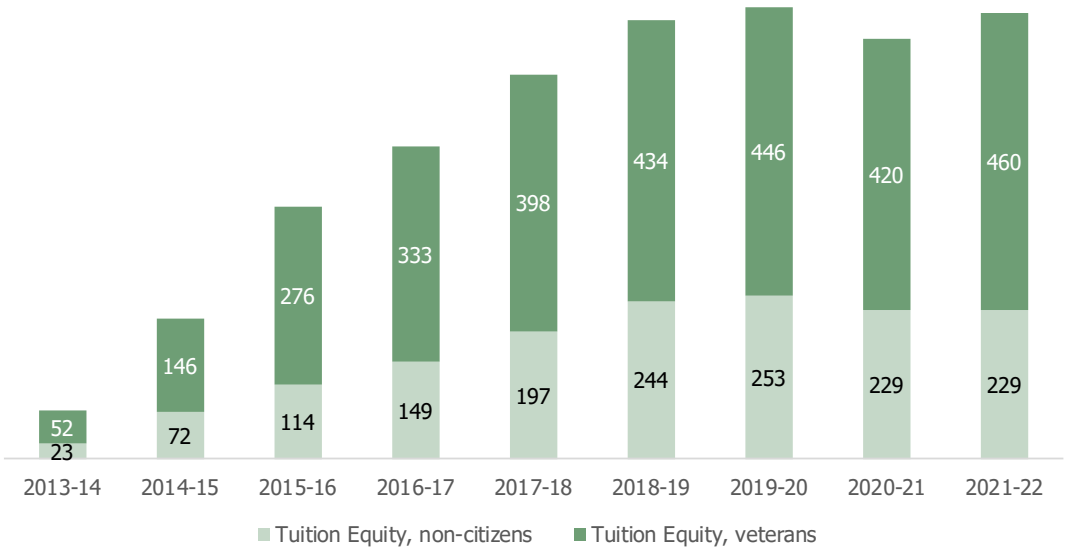

FIGURE 3. FULL-TIME EQUIVALENT ENROLLMENT OF UNDERGRADUATES IN TUITION EQUITY PROGRAM, BY COMPONENT OF PROGRAM AND YEAR, 2013-14 TO 2021-22.
Source: HECC analysis of student records.

Among graduate students, FTE enrollment in the program among grew from zero in 2013-14 to 56.2 in 2021-22 (Figure 4 below). Appendix B provides additional data on the graduate FTE for each component of the program by year and institution.

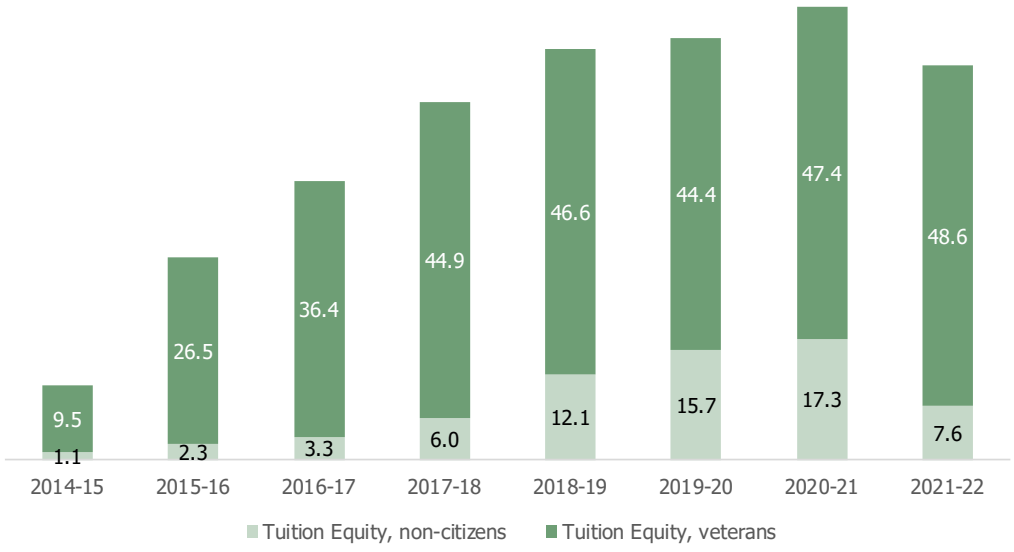

FIGURE 4. FULL-TIME EQUIVALENT ENROLLMENT OF GRADUATE STUDENTS IN TUITION EQUITY PROGRAM, BY COMPONENT OF PROGRAM AND YEAR, 2013-14 TO 2021-22.
Source: HECC analysis of student records.

The difference between in-state and out-of-state tuition at the universities is large, and undergraduate students participating in Tuition Equity experience considerable savings on their postsecondary costs. These savings range from an average of $14,593 for full-time enrollment in 2013-14 to $19,535 for full-time enrollment in 2021-22,[2] as shown in Figure 6. For students enrolled for five years (the maximum length of the Tuition Equity program), total savings range from $72,965 in 2013-14 to $97,674 in 2021-22. For both veterans and non-citizens receiving Tuition Equity benefits, the median time to earning a bachelor's degree is four years, yielding savings that range from $58,372 in 2013-14 to $78,139 in 2021-22. (See Appendix C for more detail.) These savings are substantial for students in the program. For noncitizens, the impact can be even more meaningful because they are typically not eligible for federal student aid.

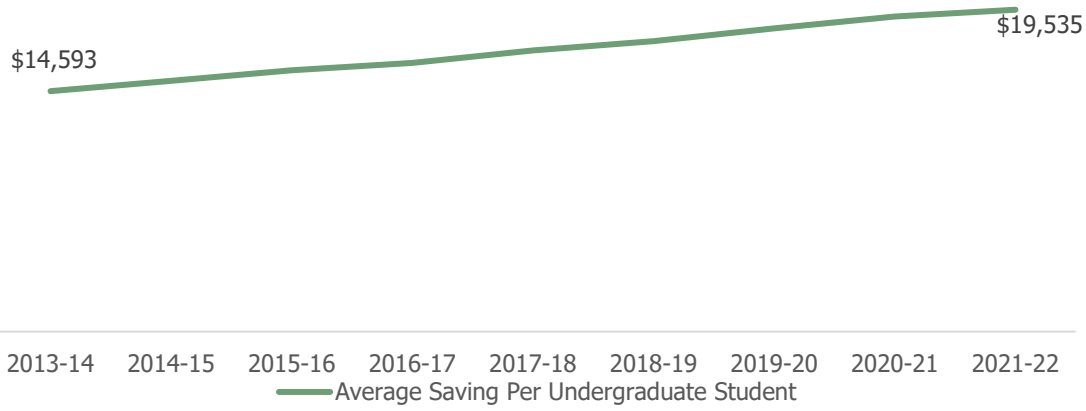

FIGURE 5. AVERAGE TUITION EQUITY SAVINGS FOR FULL-TIME UNDERGRADUATE TUITION AND FEES, 2013-14 THROUGH 2021-22.
Source: HECC analysis of student records.

Savings for graduate students are also considerable though not as significant as for undergraduate students, ranging from $6,621 in 2013-14 to $7,172 in 2021-22[3], as shown in Figure 6. The reason the cost per full-time graduate student is less in 2020-21 than prior years is because Eastern Oregon University changed graduate resident tuition to be equal to nonresident tuition. A further decline in 2021-22 occurred because Western Oregon University no longer had a tuition differential between resident and nonresident tuition. In addition, because graduate programs vary considerably in length, estimating total graduate savings is more difficult. However, for a two-year master's program, the Tuition Equity benefit yields a total savings of an average of $13,242 in 2013-14 to the average of $14,344.in 2021-22.

FINANCIAL IMPACT ON INSTITUTIONS

The financial impact of Tuition Equity on Oregon's public universities can be a benefit or a cost. If the noncitizen and veteran students decided to enroll in Oregon's public universities because of the Tuition Equity program (rather than a less costly program or than no postsecondary program), then the universities experience a benefit from the new tuition and fee revenue of these students. In contrast, if those eligible for Tuition Equity would have enrolled in the universities even without the program, then the university is considered to have lost the additional revenue that would have come from these students' nonresident tuition. Finally, the overall financial impact on the universities may be mixed, as some students might fall into one group and the remaining students fall into the other.

We assessed the potential financial impacts on the institutions by determining the difference between full-time resident and nonresident tuition and fees for the total number of students participating in Tuition Equity at each institution. The result shows a range between the maximum possible benefit of the program for the institutions and the maximum possible cost.

If all students in the program, both undergraduate and graduate, enrolled in the university where they attend because of the Tuition Equity program (i.e., paying resident tuition and fees rather than no tuition and fees) then the universities benefited in additional revenue that ranged from $651,864 in 2013-14 to $9,472,997 in 2021-22. (See Figure 7 and Appendix D.)

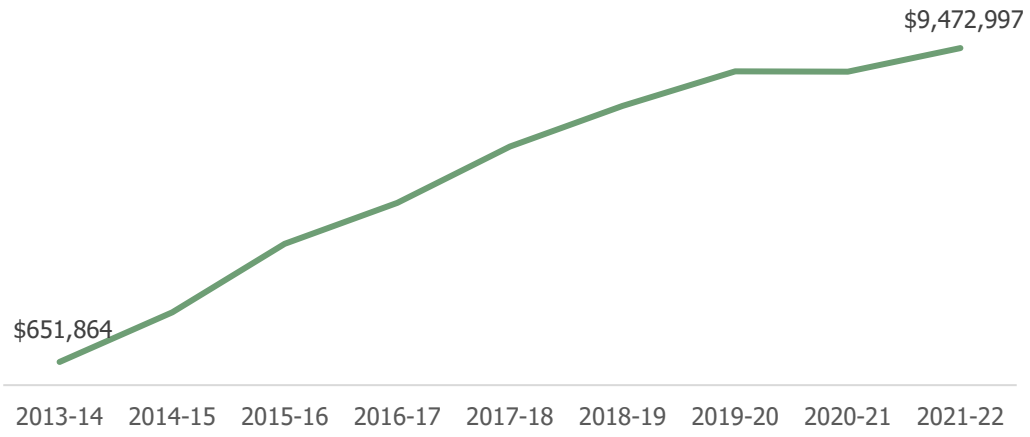

FIGURE 7. MAXIMUM POTENTIAL FINANCIAL BENEFIT TO PUBLIC UNIVERSITIES OF TUITION EQUITY PROGRAM, 2013-14 TO 2021-22.
Source: HECC analysis of student records and institutional tuition and fee data.

However, some or all of these students may have enrolled in the same institutions without the Tuition Equity program and paid nonresident rates for tuition and fees. If all students in the program would have enrolled anyway, then the cost to the institutions would range from $1,258,203 in 2013-1014 to $15,692,624 in 2021-22. These potential costs range for institutions based on the number of students enrolled and the institution's tuition and fees. (See Figure 8 and Appendix D.)

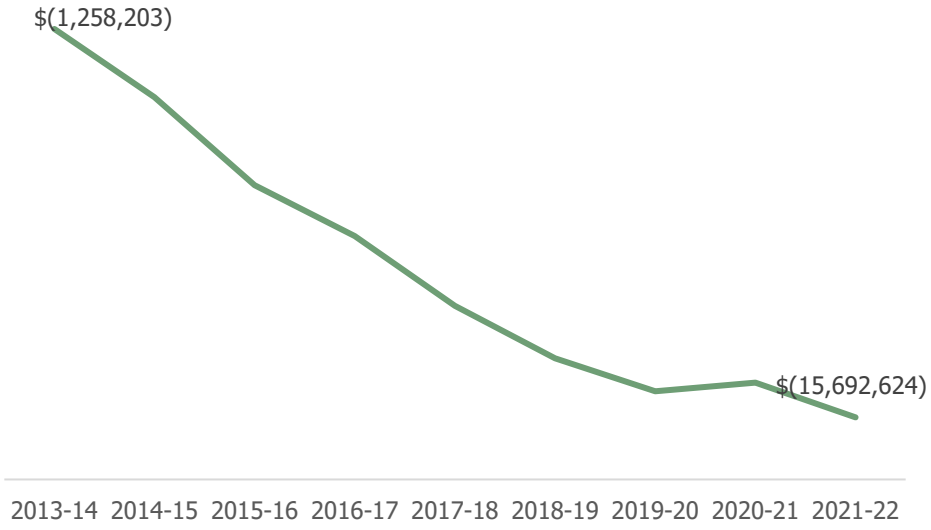

FIGURE 8. MAXIMUM POTENTIAL FINANCIAL COST TO PUBLIC UNIVERSITIES OF TUITION EQUITY PROGRAM, 2013-14 TO 2021-22.
Source: HECC analysis of student records and institutional tuition and fee data.

SUMMARY AND CONCLUSIONS

The Tuition Equity program served almost one thousand public university students in 2021-22 by providing access to resident tuition and fee rates. As in previous years, the majority of these students were veterans (about two-thirds in 2021-22), and the vast majority were undergraduates (93 percent in 2021-22). The impact on these students and their families of paying in-state tuition and fees is large, averaging $19,535 per year of full-time undergraduate enrollment in 2021-22.

The financial impact on institutions is also potentially large, but this impact may be positive, negative, or both. The maximum possible benefit to the institutions—realized if all students in the program enrolled at the university because of the program's benefits—was $9,472,997. The maximum possible cost to the institutions—realized if all students in the program would have enrolled at the university without the program and paid nonresident rates—was $15,692,624. These potential impacts have risen as the number of students enrolled in the program has risen.

Tuition Equity improves affordability for two important groups of students: noncitizens who spent much of their childhood in Oregon and veterans who left the state to serve in the armed forces. On its own, the Tuition Equity program does not solve the college affordability crisis. It serves only about 1.5 percent of admitted university students. However, for each of these eligible students, it does enable tens of thousands of dollars in savings. This is a positive impact for their college affordability and for their upward mobility, as these two groups can face substantial barriers to completing a postsecondary credential. We note that these positive impacts may come at the cost of the universities, which depend on tuition and fees as a source of revenue, though we also note that the program may increase this revenue by enabling some students to attend who otherwise could not.

APPENDIX A: ELIGIBILITY REQUIREMENTS FOR VETERAN'S PROGRAMS THAT OFFER RESIDENT TUITION AND FEE RATES FOR NONRESIDENT VETERANS

The criteria for eligibility to receive resident tuition rates in Oregon's public universities are similar for the three veterans' benefit programs shown in Figure A.1 below. These programs are: Oregon's Nonresident Veteran Tuition Benefits referenced in ORS 350.290 and the federal Yellow Ribbon Veteran program.

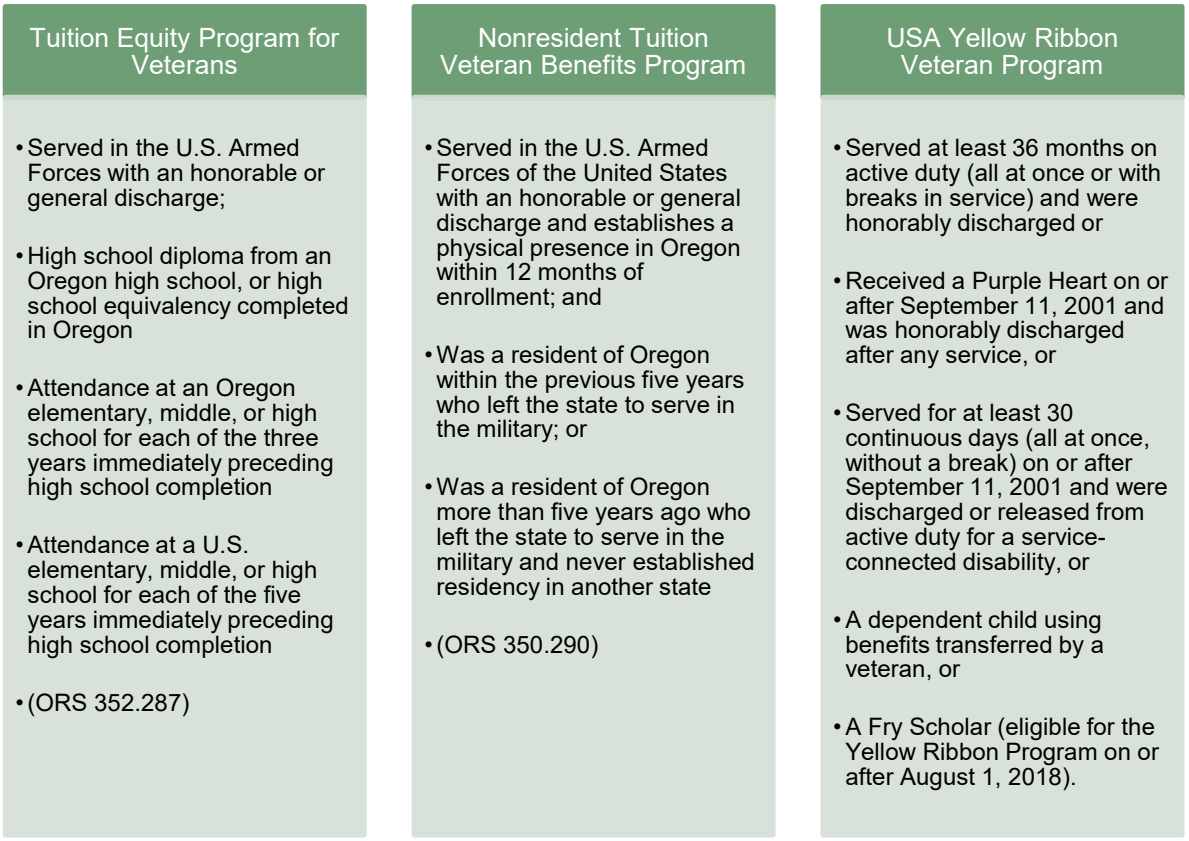

FIGURE 9. A.1. ELIGIBILITY REQUIREMENTS FOR VETERANS' PROGRAMS OFFERING RESIDENT TUITION AND FEE RATES FOR NONRESIDENT VETERANS.
