HPAI cases in Oregon since the start of the outbreak in 2022

In total, there have been 68 cases across 23 counties affecting 3 commercial poultry flocks, 58 backyard flocks, 6 feline premises, and 1 other avian premises.

*PREMISES QUARANTINES

Confirmed HPAI-positive poultry premises are typically quarantined for a minimum of 120 days. In some cases, the quarantine may be shorter depending on the Cleaning and Disinfection (C&D) methods applicable to the premises. Premises quarantines for feline cases of HPAI are released once the animal tests negative or if the animal dies. Feline premises are not quarantined if the HPAI-positive animal was deceased before testing was completed.

Oregon HPAI Regional Quarantines (Control Areas)

Established for World Organization for Animal Health (WOAH) designated poultry premises, regional quarantines extend a minimum 10 km (~6.21 miles) around an infected premises with movement restrictions on poultry and poultry products. Regional quarantines involve regulatory movement permitting and active surveillance for the designated area.

As of February 28, 2026

- ⇒ There are no Active HPAI Regional Quarantine Areas in Oregon
- ⇒ A [map of active quarantine areas](#) in Oregon is available online.

HPAI in Livestock

There are no confirmed or suspected HPAI cases in dairy cattle in Oregon

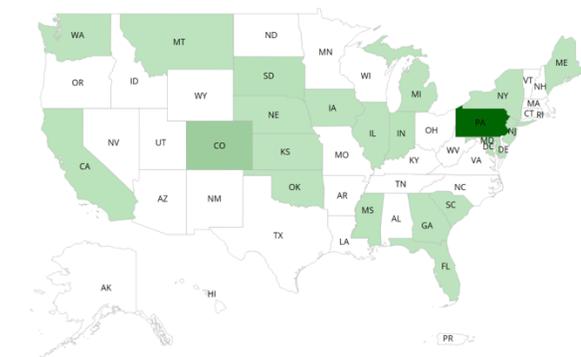

In partnership with the Oregon dairy industry, dairy processors, and the Oregon Veterinary Diagnostic Laboratory (OVDL), ODA launched its milk testing and monitoring program in late 2024. Currently **7590** samples have been tested under Oregon’s milk surveillance program.

- ⇒ More information about HPAI in dairy cattle and bovine sampling is available on the [ODA’s HPAI in Dairy Cattle webpage](#).
- ⇒ For information about HPAI detections in dairy cattle throughout the United States, visit the [USDA’s HPAI Confirmed Cases in Livestock webpage](#).
- ⇒ For information about HPAI detections in humans throughout the United States, see the Centers for Disease Control and Prevention (CDC) webpage: [H5 Bird Flu: Current Situation](#).

National HPAI Status (SOURCE: [USDA H5N1 Influenza Detections of HPAI webpages](#))

| H5N1 HPAI Confirmed Detections As of February 27, 2026 | |
|--|----------------------|
| Domestic Flocks | |
| Commercial flocks | 32 (Last 30 Days) |
| Backyard flocks | 27 (Last 30 Days) |
| Birds affected | 9.68M (Last 30 Days) |
| Regional flock confirmations (last 30 days): 0 flocks (OR); 1 backyard (WA); 1 commercial, 1 backyard (CA) | |
| Domestic Livestock | |
| States Affected | 0 (Last 30 Days) |
| Confirmed cases | 0 (Last 30 Days) |
| Regional livestock confirmations (last 30 days): None | |

Last Reported Detection: Thurs, February 26, 2026
Domestic birds affected by state in the last 30 days
