

# Oregon Import Requirements

## DAIRY CATTLE

### **Certificate Of Veterinary Inspection (CVI) - OAR 603-011-1100**

A CVI issued by an accredited veterinarian, is required for all dairy cattle. The CVI must be an official CVI with a unique serial number and be issued within 30 days prior to the animal(s) entering Oregon.

### **Import Permit - OAR 603-011-1100, OAR 603-011-5007**

An import permit, issued by ODA to an accredited veterinarian when issuing a CVI, is required for all dairy cattle within 30 days prior to entry. Veterinarians using an electronic CVI (eCVI), approved by the National Assembly of State Animal Health Officials, are not required to obtain an import permit if the cattle do not originate from an HPAI infected state.

### **HPAI Milk Testing - Federal Emergency Order**

See the federal order pertaining to HPAI in livestock for testing requirements for lactating dairy cattle. Information can be found on USDA's [Detections of Highly Pathogenic Avian Influenza in Livestock](#) webpage.

### **Official Identification - OAR 603-011-1100**

Official identification in accordance with 9 CFR part 86, is required for all incoming dairy cattle no matter the age or purpose.

### **Tuberculosis Testing - OAR 603-011-1240**

All cattle over 2 months of age entering Oregon for rodeo purposes are required to have a negative tuberculosis test within 12 months prior to entering Oregon.

For Mexican origin cattle please call 503-986-4680 for special requirements

### **Trichomoniasis Test - OAR 603-011-1210**

All non-virgin dairy bulls of any age with known breeding contact with female cattle, and all bulls 18 months of age and over are required to have a negative Trichomoniasis (Trich) test within 60 days prior to entering Oregon. The CVI must have the following statements on it:

- “The bulls on this CVI have been tested for trichomoniasis and have been confined and have not had sexual contact with females since their last negative test”
- “Trichomoniasis has not been diagnosed in the herd of origin within the past 24 months”

Bulls used solely for exhibition or rodeo purposes do not require Trich testing if the CVI has a statement on it that says:

- “To be used solely for exhibition and remain under confinement at the location of the exhibition without having access to or allowed to commingle with sexually intact female cattle”
